tu tut tut

anyone with even basic understanding of the term resonant will
tell you that one length can not resonate "across 40 metres"

that is al he was claiming and refusing to support geeze nowonder i missed his "claims" I though he was reffereing to something important

but thn I will disagree I suspect he may well have been appointed (after if went into one of His bull dog modes and it were in my power to fend him by writing a letter of appointment I might well have done so), and simply failed utterly to learn anything about what he was doing, or utterly failed to even find the object of his posting
>
> In the end, no one beleived him.

I'll believe him in that one He was given the job and utterly failed to understand it, that seems plausible to me

## 8. Re: PGP encryption of data on amateur radio?

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-01 02:38:49 UTC
From: N9OGL <toddaug555@yahoo.com>
Message-ID: <1122863929.091430.181500@g47g2000cwa.googlegroups.com>
Source record: 114359

John:

Well the problem is the rules, the rules are so obscure that many amateurs believe that encrytion isn't allowed on the amateur bands. however, really this isn't the case. 97.113(a)(4) states:

"..... messages in codes or ciphers intended to obscure the meaning thereof, except as otherwise provided herein..."

and many amateur operators will tell you that amateur's operators are not allowed to do any form of coding. however, if you read 97.309(b) it states:

"....b) Where authorized by §§97.305(c) and 97.307(f) of this Part, a station may transmit a RTTY or data emission using an unspecified digital code, except to a station in a country with which the United States does not have an agreement permitting the code to be used. RTTY and data emissions using unspecified digital codes must not be transmitted for the purpose of obscuring the meaning of any communication. When deemed necessary by an EIC to assure compliance with the FCC Rules, a station must:

(1) Cease the transmission using the unspecified digital code;
(2) Restrict transmissions of any digital code to the extent instructed;

(3) Maintain a record, convertible to the original information, of all digital communications transmitted"

So unspecified digital codes are allowed as long as they are not there to obscure or hide the meaning.

Todd N9OGL

You're talking about two different skill sets.

Hans is talking about written copy - specifically,
copying on a mill (typewriter). Those who get
good at that skill set reach a point where they
really don't think about the incoming copy - it
just flows.

In some cases the op literally doesn't know the
content of the copy.

What you're experiencing is the beginnings of
conversational Morse Code. This is where you
understand the incoming Morse "directly", like
listening to someone talk.

Similar skill sets occur with sending.

--

Morse Code is much more than "an encoding scheme".

> cutting stevie stevie evasion

Nope.

You're accusing ME of "evasion" then cut out direct, specific
questions aimed at you.

THAT is "evasion".

THAT substantiates my accusations of "COWARD" directed at you.

> > > > > > > > Refer to standards for scriptwriting per the AMA and JCAHO.

You keep "cutting" direct questions.

You accused me of "practicing medicine", yet when I asked you to specify what yuo thought that was, you just "cut" it out.

So here it is AGAIN.

QUOTE

Secondly, if YOU don't take the time to sit down with your doctor and go over those medications to understand what each one is, it's benefits, expected outcomes, potential side effects and possible alternatives to their use, then you're the idiot I have always claimed you are

UNQUOTE

Show us, Mighty Markie, where the "practicing medicine" part is, or have yet ANOTHER validated reason to be known as a liar heaped upon your already robust CV of existing mistruths...

> you called my dontor unprofessional that is libel Stevie boy

Your "dontor"...?!?!

I said IF yuor Doctor's writing was illegible, then he's unprofessional.

That's not MY assessment, that's the AMA, the DEA and the JCAHO.

So is it now YOUR assessment that YOU know better than the American Medical Association, the Drug Enforcement Agency and the Joint Commission for the Accredidation of Healthcare Organizations what constitutes professional conduct?

> XYL.

I once built a receiver on the kitchen table. Had all the bits
and tools in a large wooden box. I'd clear the table, put down
yesterday's newspapers to protect the surface, then build. At the
end of the work session the parts were all put away and the
newspapers were carefully folded up, containing all the wire
snipends, metal filings, etc.

1977 or so, when I was in a small apartment. Still have the receiver.

Sure I have an interest...even when it's a "different viewpoint".

The PROBLEM is that you, Lennie, Brain and Toiddie have a unique
way of expressing those viewpoints.

Espeically Lennie.

"I don't like Morse Code testing because I think it's an
antiquated mode" is a valid and debatable point.

"Macho Morsemen are killing off the hobby with their luddite,
archaic demands" is a baldfaced lie and meant to do nothing more than
incite the very flames that it does.

You? You're just an idiot that is always in second place because
you won't pay attention or fix your own problems. Everything is always
"someones" fault. You're a career victim.

You occassionally have moments of lucid, polite behaviour, even
insightful, but then launch right back into your own "lier" (now
updated and improved to 'lair') routine.

> > > Someday it will be worthy of study under the heading "Aberrant

What? Huh?

> > Just me proving you to be what I claim. And You providing the
> > material for me to do it with.

>
> what do you claim BTW, this moment it changes more often the Kerry's
> positions

I claim that Leonard H Anderson is a liar. I claim this due to
his frequent errors of fact that are obviously intentional and intended
to decive others about the Amateur Radio service.

This is, in fact, proven by repeated examples of
misrepresentations on his part. Not to mention numerous deceitful acts
and actions. His "license" e-mail (actually a picture of a guy
'mooning' from the forward bubble of an A-26) and "I'll get my 'Extra
Lite' out of the Box" stories come to immediate mind.

I call Brian P Burke a liar. I do this since he's repeatedly made
statements and assertions about his alleged "DX" operations that have
never bore out with so much as one single QSL card to prove it, nor has
he shown where it was a legitimate operation to start with.

Furthermore, he's made coutless other assinine assertions
("cordless devices" and "ARES" among them) that have also never bore
the weight of scruitiny. Nor has he ever offered a single word of
validation as to why he'd say so patently wrong things.

The only one in the bunch who can't be really "dinged" for being a
liar is you, since you own up to it, but that still doesn't relieve you
of responsiblity for BEING a liar, especially one who BRAGS aboutm
being a liar.

I don't know why some people think it's perfectly OK for them to
"exercise my free speech" by saying things that are offensive and
deceptive, only to scream foul when someone else uses THEIR "freedom of
speech" to rebutt it...ESPECIALLY where there is evidence to prove the
assertion.

> > > > Stebie's posting sometimes read like "Watchtower" clone bad

> > > Is "Watchtower" good science fiction?
> >
> > A little lost, are you?
>
> not at all, why do you ask? are you admiting to being lost? (we know
> you are lost)

You seem to not know what "Watchtower" is, thinking it's "science
fiction".

"Watchtower" is a periodical put out by the Jehovah's Witnesses,
and usually delivered by three devotees who show up at your front door
at dinner time asking "Have you heard the word of God today...?!?!"

> > > > Stebie should have put His "truth" in quotation marks. Dat

>
> they freely admit to not confroming to YOUR notion of reality,
> Something I will also admit to if you like

My "notion of reality" is that adults tell the truth to each
other, or at least explain thier reasoning behind it...

Doesn't happen here too often...I screwed up and tried that with
you and Lennie...You started right off with "lier" and "I am a
Colonel..." carap.

You expect me to respect your "ideas" after that?

And Lennie didn't take too long to realize that I wasn't being
swayed by his techno-geek bufoonery (while remaining civil), and
launched in on "Nazi", "thug", "Dill Sergeant", etc etc etc.

He claims he didn't start it nor does he "do" that, but look at
any of his posts directed at Jim Miccolis, N2EY...Jim has never once
addressed Lennie as anything BUT "Len" or other appropriate derivision
of his proper name.

Doesn't stop Lennie.

> > Where were you on that Boy Scout Jamboree, BTW, Brain?
> >
> > Certainly osunds like they ahd some of your "leadership" behind

> reality

BUZZ wrong answer Markie. I have a very firm grip on reality.

Now I will grant you that expecting Lennie to be civil, Brain to
tell the truth, or you to get help for your English composition and/or
comprehension problems may be UNREALISTIC, but so were the concepts of
Aviation and space flight once-upon-a-time.

thats whjy i beleive in a free system for those who dont wish ot build or repair

legailse 2 metres/70cms maybe only single freqs not repeaters for anyone who wants to,a licence to purchased but no need to learn morse and other things,so ok still a liocence nbut make it easier

then the other liocences for those who require more.

and why insult cbers all the time again i have known many a good cber and many a bad one

seems like you want to just have ham radio to a few in th clique

things will change regardlss OFCOM really does not want the hassle of loking after any two way radio,least alon ameteur,it wants more of a free for all on all bands.

i disagree with much of OFCOMS ideas but ham radio ifd its going to survive needs to welcome more people regardless of abackgoind and abiklities

i fail to see why i should know how to put an aerail together or solder something when all i want to do[not really just hypothetixcally] is speak into it to contact someone else.

Oh yes he could!

Radio amateurs thrive when in the midst of QRM and N. Brings out the best in 'em. Determination and the competitive spirit.

Without it, on a silent band, they are in danger of lapsing back into the state of couch potatoes with nothing to discuss except the weather and their state of health.

> it. Some examples:

Do you mean something like your own claims that you've had a several
decades interest in amateur radio and the one about getting the "Extra
right out of the box" and your subsequent statements about having no
interest in obtaining an amateur radio license?

> True! Google archives have the proof in them, in thousands of
> personal-insult messages generated by Stebie...with only a few
> (perhaps a dozen at most) which are actual discussions devoid
> of personal attacks at somebody.

Watch it, Leonard. That sword cuts two ways!

> That would disturb Stebie's fantasy. He wants the nicely-ordered

> handle disagreements with his opinions, tries to defend himself
> (no need in normal discussion not about a person) by issuing a
> series of personal insults directed at his perceived "accuser."

Wow! That must seem like something straight from your past, Len. You
don't handle disagreements with your positions and you defend yourself
in a series of personal insults, directed at your perceived "accuser".
In fact, a fitting profile of your likely actions was put together by N2EY.

> There is, nor has there ever been, a SINGLE "correct" way of
> doing things in amateur radio. Amateur radio is NOT a military
> branch and the ARRL is NOT a directive-issuing "headquarters" (no

> matter what some like to believe).

Congrats. That's a familiar and masterful statement of the obvious.

> Any "need" to hold tradition
> tight and fast, to "work" stations in a particular mode (such as
> radiotelegraphy) is purely personal perception.

I don't know how you operate your amateur radio station, Len, but I
don't use tradition in working other stations. If a station I want to
work is using CW, I use the same mode to QSO him. If he's using SSB, I
use that mode. If he is using FM, I use that mode. Your own personal
perception seems skewed by your lack of amateur radio experience.

> Hewing to one
> particular way of doing things is NOT indicative of some kind of
> expertise in anything.

Interesting, Leonard. So, just because others use CW to call a station
CQing in that mode, is no reason that you'd have to do so. You could,
for example, use FM. That would certainly show us your level of expertise.

> But, the old rank-status-privilege class consciousness of the
> old six-class license system suits the ordered, disciplined
> military psyche. One "works up through the ranks" (in some
> folks' perception) even though the hobby is just a hobby, not a
> job, not a branch of the military, not part of a union or craft
> or guild.

Nope. There's no union, craft or guild. Then again, nobody has claimed
anything like that. You might see similarities between the six class
licensing system and the new three-tiered system. You'd still have to
work your way through the ranks and you'd still receive additional
operating privileges as you went through those ranks.

> It CAN be a fun hobby, an interesting personal
> recreation,

...or so you've been told.

There's nothing "out of context", Mark. You've stated that Steve is attempting to claim glory by mentioning that he'd received a QSL card for a QSO he didn't make. I've received hundreds of 'em over the years. I've never attached any personal glory to that. I didn't read anything like that into Steve's post. You are the only person who did.

Dave:

With enlightenment comes freedom...

Freedom to exchange data without restriction is a tool all educated peoples would seek.

How some can argue that placing limits and short comings on the internet is some kind of "enlightenment" is beyond logic, the two conflicting concepts are ironic to attempt to even fit together...

"A picture is worth 10,000 words" has always been accurate--it still stands today." Individuals who would argue to "blind" us to that wisdom and call it "enlightenment" are either sorely mistaken and confused, or do so for other purposes not well understood by those questing true knowledge and enlightenment.

Newsgroups are just a 7 bit data forum, methods exist to fit 8 bit data in such a forum...

Don't open posts with encoded binary if it is some kind of threat to you. That is your option...

More lies Stevie, I refuse to participate in your libeling of some one
else

>
> THAT is "evasion".

nope that is honarable behoavot
>
> THAT substantiates my accusations of "COWARD" directed at you.

nope it shows your lack of Honnor and your cowrdace that you attack
people not present to defend themselves if they choose

cutting stevie trying to inviolve people not here in his juvi games

I have said i will play along with your games, to a point, but there are points I will not go

Like when you seek to use people not here to play your games

no you don't you just start demeaning that we comply with your
viewpoint

>
> The PROBLEM is that you, Lennie, Brain and Toiddie have a unique
> way of expressing those viewpoints.

and therein lies your problem Stevie, you see the facts we are are
defferent as a problem

>
> Espeically Lennie.
>
> "I don't like Morse Code testing because I think it's an
> antiquated mode" is a valid and debatable point.
>
> "Macho Morsemen are killing off the hobby with their luddite,
> archaic demands" is a baldfaced lie and meant to do nothing more than
> incite the very flames that it does.

it isn't a bald faced lie, it is an accurtate disription of a valid
point of view

I agree that the Luddite rejection of change embodied by the clring to
more Code is an open wound in the Body of the ARS.

Len statement is simply a colorful expression of that view

>
> You? You're just an idiot that is always in second place because

> you won't pay attention or fix your own problems. Everything is always
> "someones" fault. You're a career victim.

nope you are just lying agian

>
> You occassionally have moments of lucid, polite behaviour, even
> insightful, but then launch right back into your own "lier" (now
> updated and improved to 'lair') routine.

stevie if you want me to treat you politely then you can have it but
you have to treat me politely first at this point

you lie constantly by presenting your view as undesputable fact

where it is at best opinion

>
> > > > Someday it will be worthy of study under the heading "Aberrant

> his frequent errors of fact that are obviously intentional and intended
> to decive others about the Amateur Radio service.

Making erros of facts even if done doesn't make make one a lair, unless
you are willing to embrace that label yourself

and the rest of the statement is another bald faced lie

>
> This is, in fact, proven by repeated examples of
> misrepresentations on his part. Not to mention numerous deceitful acts
> and actions. His "license" e-mail (actually a picture of a guy
> 'mooning' from the forward bubble of an A-26) and "I'll get my 'Extra
> Lite' out of the Box" stories come to immediate mind.

neither of those example have any conection to the charge you are
making

>
> I call Brian P Burke a liar. I do this since he's repeatedly made
> statements and assertions about his alleged "DX" operations that have
> never bore out with so much as one single QSL card to prove it, nor has
> he shown where it was a legitimate operation to start with.

you make that the claim it was not then becomes your burden

if this is Somolia reference than I don't see in the absense of any
Govt any operation on treaty ham bands could be ilegal

>
> Furthermore, he's made coutless other assinine assertions
> ("cordless devices" and "ARES" among them) that have also never bore
> the weight of scruitiny. Nor has he ever offered a single word of
> validation as to why he'd say so patently wrong things.

I have seen any such patently wrong statements and if he has not made
any he does not owe any explaination

>
> The only one in the bunch who can't be really "dinged" for being a
> liar is you, since you own up to it, but that still doesn't relieve you
> of responsiblity for BEING a liar, especially one who BRAGS aboutm
> being a liar.

more lies stevie I don't brag about it, you make it an issue often
enough that i end up not dening it often

and you simply can't stand for a defferent veiwpoint
>
> I don't know why some people think it's perfectly OK for them to
> "exercise my free speech" by saying things that are offensive and
> deceptive, only to scream foul when someone else uses THEIR "freedom of
> speech" to rebutt it...ESPECIALLY where there is evidence to prove the
> assertion.

you claim they are deceptive without proving the claim, and it takes so
little to offend that it borders on by proof that you have a mental
problem right there

you don't rebut the statements with facts you attack the maker of the
statement, not the the statement, this is hard to do without either,
one, comiting libel/slander or two, engaing in harassment, or engageing
in hate speech.

Stevie you seem to lac the skill to mange that

>
> > > > > Stebie's posting sometimes read like "Watchtower" clone bad

taking one claim out of a dozen or so is taking it out of context, in
and of iteslf Stvie 's amking the claim of a false contect is merely
odd, indefending it freicely he makes it odder, placed in context of of
many other acts it helps form a pattern

"Lair". Maybe you meant "a liar"?

In any case, more likely just "mistaken in their understanding of the proposed rule".

blimey someone understanding my posts its a miracle

as said i dont want to denigrste the hard work and achievements of fully licensed hams,just see the need for a more fun less or unlicensed side again like pmr446 using low power

in rest of eurrope you have such a band of 69 channels in middle of 70cms,and indeed some people use such in uk already,males sense to allow its use in UK

trouble is of course 70 cms is MOD as well of course and they are rspidly taking more and more spectrum for barracks/us bases and other high sec location

regards,pAUL

Mark, you blabbering idiot...Type ONE WORD AT A TIME, do it SLOWLY,
and QUIT trying to impress us whith how many words you (think) you
"know"...because it's painfully evident to any elementary schooler that
you're functionally deficient in the use of even colloquial English.

What ever you tied to say there was nothing but trash...And I
don't mean that because I am sure you were tryi to "diss" me...It was
just alphabet trash.

Steve, K4YZ

>> copy stuff. :-)
>
>Is "Watchtower" good science fiction?

No. It's not even a subject at the world's first (and still
oldest surviving) Science Fiction Writer's Association in
North Hollywood, CA.

Stebie's output is more like the 1930s "Big Lie" technique
used by the national socialist party of Germany at that time.
Publish enough of it, often enough, as widely as one can, and
some folks will begin to believe it. It's a common
psychological warfare technique used the world over.

>> Stebie should have put His "truth" in quotation marks. Dat

We might have to bring back "Duck and Cover" drills...

>> Brian, you are too subtle for Stebie. He failed to notice your
>> plural form of "yourselves" (as in reference to multiple
>> personalities). :-)
>
>He's not very bright.

Plus a barbarian emotional mentality...resorts to brute force
whenever challenged in the slightest. Tsk, brute force doesn't
work in an enviornnment where it is impossible to really reach
out and hit anyone. He implies "threats" of coming to various
challengers' residence areas as a surrogate, that nothing more
than bullying taunts.

>> Welp, Stebie has just admitted to hypocrisy. It used to was that
>> anyone talking back to Stebie "HATED ALL HAM RADIO!" Now Stebie
>> admits he is only "representing" HIMSELF (and all his personalities
>> of course). There's a tiny promise for optimists there. :-)
>
>I'm optimistic about many things, but Steve is not one of them.

Tsk, I'm getting the same way.

It's remarkable that his "fellows" and "peers" in here (extras
all of them) all seem to condone his actions denigrating the
spirit, cameraderie, and "propensity for international good
will" (FCC phrase) of the amateur radio service. He's a poster
boy of what NOT to be in the amateur radio hobby. But, he IS
"federally qualified" to transmit RF on U.S. amateur radio
frequencies and has a certificate (suitable for framing)
attesting to that. After all, he thinks that OBTAINING THE
*LICENSE* is the most desireable attribute in U.S. ham radio.
He recently said so.

>> Do you mean something like your own claims that you've had a several
>> decades interest in amateur radio and the one about getting the "Extra
>> right out of the box" and your subsequent statements about having no
>> interest in obtaining an amateur radio license?

Mark, the above is consistent with "Heah com' de Judge" Heil
to attempt discrediting anyone disagreeing with his god-like
opinions.

The word "interest" is unquantified and subjective, the subjective
being both emotional and intellectual. But, Heil attempts to
concentrate ALL RADIO into the realm of amateur radio in his
statements that I was (implied) "interested in amateur radio."
He failed to understand that MY INTEREST was in ELECTRONICS
(radio is a subset within that generic grouping) since 1947 but
that was NOT some kind of deep, soul-grabbing, lifetime career
goal to achieve ONLY in licensed amateur radio.

My original "lifetime career goal" was to be an illustrator
(that's an artist who draws/paints things as they are), using
a born aptitude for art/illustration. I began work (for money)
at that prior to military service. However, my military
assignment put me into the 3rd largest U.S. Army HF
Communications Network transmitter station of the 1950s, a 24/7
operation relaying about a quarter million messages a month
over three dozen and more high-power HF transmitters. That plus

a delayed (installation priority of equipment) exposure to multi-channel microwave radio relay equipment as well as all the facets of Big Time communications of that era changed my career goals so that, by 1958, I had changed my major study (and campus) from Art to electronics engineering...while being employed full time in southern California aerospace industry. I've retired from regular hours in that, but still work from time to time at electronics design engineering. [yes, I've done some illustration from time to time (for money, of course) just to keep my hand in that, plus (unpaid) practice, but that is due to an aptitude and skill in that field]

Now David Heil, Judge of the Lowest Court of Arrogance, wishes to "sentence" me on some artificial charges of moral perfidy because I DID NOT BECOME AN AMATEUR *FIRST*! :-) Tsk, his personal vilification insults (from being disagreed with early on in here) ORDER me to DO AS HE SAYS I MUST! :-) Tsk, tsk, I do not have the glorious Time Machine apparently possessed by James Miccolis to travel back in time to alter my Life Goals. Further, I have NO WISH to subjugate myself to Heil's COMMANDS nor his moral edicts on WHAT IS GOOD and WHAT IS NOT GOOD in anything.

My original goal in THIS NEWSGROUP about seven years ago was to attempt some influence on ELIMINATING THE MORSE CODE TEST REQUIREMENT for U.S. amateur radio licenses. What I've encounterd is an almost KKK-like good-old-boys-club of Mighty Macho Morsemen who all seem to be control freaks of major status, ultra-conservative RADIO BIGOTS who stop at nothing to preserve THEIR PERSONAL DESIRES in federal regulations of a virtual HOBBY radio activity. These Mighty Macho Morsemen are guilty of moral perfidy and unbending status-quo-ism in absolute vilification of ANYONE who does not agree with them. The MMM denizens of this din of inequity are hypocrites as well as radio bigots...they are "free" to personally insult anyone they so choose, yet NONE are free to do the same to them.

Instead of discussion and debate on regulation ISSUES and SUBJECTS, we are "treated" to an outpouring of personal insults, out-of-context quotes, and, in a few cases, outright falsehood statements by these self-enobled "keepers of (some) faith" all in the interest of maintaining THEIR elite status of rank and privilege and long tenure in U.S. amateur radio.

But, these elitist morsemen have ultra-thin computer-modem "skin" and their "sensitive" emotional states forbid ANY criticsm of THEM. THEY are sacrosanct, not to be touched while they freely roam and throw insults at their disagreers as early barbarians did in subjugating other people in other lands. ALL MUST SUBJUGATE themselves to THEIR points of view

and MUST NEVER act as they do back at them!

Tsk, tsk. These morsemen do not understand that they are NOT universally "loved" nor are their opinions "truth" always! They are delusional in thinking that all those who disagree with them are "wrong." They are in denial and are frozen in the antiquity of hobby radio standards and practices. There is no point in trying to argue the SUBJECT with THEM, just to bear up under the onslaught of personal denigrations they hurl at disagreers. The "radio sport" in HERE thus becomes the usual mud-slinging Flame War unfortunately common to all of USENET and any Internet message forum.

So, Judge Heil "conveniently forgets" certain past statements, pulls out others OUT of context, and thus manufactures some Moral Perfidy commited by a disagreing individual. He cannot argue the SUBJECT...all he can do is attempt insult on individuals to win "message points." He wins NOTHING.

Stebie Robeson is another, though he appears so far gone in his visible-syndrome psychosis and reality-fantasy confusion that he be beyond redemption, certainly beyond discussion or debate.

Fortunately there is WT Docket 05-235 before the Commission and the Comments so far (184 as of mid-Sunday) are running about 3:1 in favor of dropping the morse code test for an amateur radio license. This will be the "equalizer" to put the amateur radio "servicemen" almost on the same playing field (or battleground as many seem to think) and there may be some break in the rancor and bile from the elitist ultra-conservative status-quo-ists.

dit bah

Start demeaning what?

Or did you mean "demanding"...???

If you perceived something I said as "demeaning", it was probably
because I was responding to something that was so absolutley idiotic or
assinine that I had a hard time staying in the chair from laughing so
hard.

If you meant "demanding", you're more than welcome to pony-up a
quote of mine that substantiates your claim that I have DEMANDED
anything.

> > The PROBLEM is that you, Lennie, Brain and Toiddie have a unique
> > way of expressing those viewpoints.
>
> and therein lies your problem Stevie, you see the facts we are are
> defferent as a problem

Oh, you're "defferent" alright.

I don't have a problem with DIFFERENT, Mark.

I DO have a problem with intentionally mistruthful or deceitful.

> > Espeically Lennie.
> >
> > "I don't like Morse Code testing because I think it's an
> > antiquated mode" is a valid and debatable point.
> >
> > "Macho Morsemen are killing off the hobby with their luddite,
> > archaic demands" is a baldfaced lie and meant to do nothing more than
> > incite the very flames that it does.
>
> it isn't a bald faced lie, it is an accurtate disription of a valid
> point of view

No, it's a bald faced lie.

There are no "Macho Morsemen" holding ANYthing back.

If there was, there never would have been the NCT or the present
"Kill Element 1" movement.

Amateur Radio is more than 3 1/2 times bigger today than it was
when I was a Novice in 72. One can communicate around the world with
an NCT and an HT. We can communicate with the Space Station, any one
of 10-12 satellites, and we have HF radios smaller than a carton of
cigarettes where it once took a whole deskfull of gear to do the same
thing.

> I agree that the Luddite rejection of change embodied by the clring to
> more Code is an open wound in the Body of the ARS.

Read the above then try to realize why your statement is so
assinine.

> Len statement is simply a colorful expression of that view

Lennie's statement is an anagonistic swipe at a subset of radio
communicators he doesn't like because at sometime in his past one of
them "diss'ed" him.

It has nothing to do with reality.

So here's the challenge, Mark...

We just hit August of 2005 so I will use previous Augusts as the
milestone...

Go find old copies of any Amateur Radio journal...Heck...take "CQ"
since it started in 1945...A nice round number of years (suggested
since Lennie will jump in about how the ARRL is hardly objective, etc
etc etc...)

That represents an even 60 years of Augusts.

I dare you to look back through all thos Augusts and then come
back here with a straight face and tell me about how Amateur Radio is
not "progressing".

Even better yet...Since Lennie's always harping about how Amateurs are allegedly "stuck in the 30's", go ahead and stroll back through QST's back to 1930. That now gives you SEVENTY FIVE Augusts to establish trends with.

Now compare the technology, practices, modes, etc of August 1930 or 1945 with August of 2005, and THEN tell me how Lennie's accusations of the immobility of Amateur Radio are true...?!?!

Good luck.

Steve, K4YZ

sure are

relaince on Morse Hald back bring new folks in EME for example with
most of that world being unwilling to bother with other modes people
like myself are all but excluded

this but one example

Indeed you sent me an email fewyears back after CQ or was it CQ VHF
published a letter to that effect when I comented on the inapproateness
of talking about testing in the "VHF and up "

>
> If there was, there never would have been the NCT or the present
> "Kill Element 1" movement.

wrong that MM is the reason it was needed to to form and campaign for
the NCT The ARRL was opposed to NCT til it was done then tried to claim

it was all for it, that it has teken years to kill code testing is
another sign of the MMM hlding things back

>
> Amateur Radio is more than 3 1/2 times bigger today than it was

Ah, but there is no such thing as an Internet without limits. You are
living in a make-believe world if you think so.

> Newsgroups are just a 7 bit data forum, methods exist to fit 8 bit data in such
> a forum...
>

Clue: Usenet is *not* the Internet. Repeat that to yourself 100 times.

> Don't open posts with encoded binary if it is some kind of threat to you. That
> is your option...

The people who make their servers available to carry Usenet are the
ones who are making the rules. If their rules are violated, they
either block the originating site from their collective servers
(Usenet death penalty), or they retroactively cancel the posts of an
offending individual (spam canceling, based on the BI of a post, for
example). Others, such as groups.google.com, simply don't allow
binary posts on their servers in the first place.

So, John, it is the option of the people who own the servers to cancel
or block your posts, and there's nothing you or Dave can do to change
that. If you want to know what the server owners are thinking, go to
the newsgroup 'news.answers' - a group that a newbie like yourself
should read before continuing to make a fool of yourself on Usenet.
In news.answers you will find one or more FAQs which outline the
reasons that binaries in non-binary news groups are not allowed.

Again: Usenet is not the Internet. And Usenet is not a democracy.

That's a pretty good leap, "John". I didn't see anything about binaries being banned. There are binary newsgroups for everything.

> I think you can probably come up with a lot of reasons YOU think they should be
> banned--and are good enough, but, freedom of exchange over-rides anything you

I saw nothing advocating the banning of binaries. Your "freedom of exchange" is intact and your "right" to post binaries in text newsgroups overrides nothing.

> But, they are not good enough reasons to block the exchange of ideas, there is
> no "gentleman's agreement", there is a bunch of cheap-shot idiots like you

The exchange of binary "ideas" is carried out daily, in the tens of thousands--in the *binary* newsgroups.

> You think if you argue long enough and hard enough you may pull the wool over
> the simple minded masses eyes.

Some of the simple-minded masses seem to have plenty of eye wool already.

Okay, *you'd say*. Let's ask some rational folks. I suppose you're dismissing Mark's fabrications of some years ago and his stubborn refusal to make his posts look like the English language. How do you feel about his vulgar postings which make him look more like the harasser/stalker than the harassed/stalked?

> But, Gruppenfuhrer (excuse me, JUDGE) Heil LIKES to pick on

There's nothing from the FCC about domestic good will. Maybe you can
talk Mark into really moving to Canada. Perhaps then, he can continue
to act like a jerk and Steve may ignore him.

> I guess not. Their version of amateur radio is coming
> to a nasty, inevitable END. They are just so SURLY!

I expect that "my version" of amateur radio will be just fine. I'll
continue to operate using the mode of my choice. I'll work those I
choose to work and not work those I choose not to work. Are you going
for that "Extra right out of the box" when *your* version of amateur
radio comes into being?

>
> It is very difficult to guess but I would expect a significant number of
> people to take the Tech & General at the same time as there is only a small
> jump in difficulty level so that their original licenses will be General.

Well, "small jump in difficulty" is subjective. Back in 1987, FCC
thought
the difference was significant enough that they split the old General
into
two elements. Old 3 became 3A and 3B, with 3A for Tech and both for
General.

> In any classes that I teach, that will be the approach that I take and I
> will have a syllabus geared towards that goal. If you are familiar with the
> "Now You're Talking" study guides from the 1992 era, you will recall that it

> encouraged students to take the road of studying for both writtens (and
> code) and take all the tests. I'll take the same approach. This way the
> material that is repeated between the Tech & General needs to be studied
> only once.

I think it all depends on the individual. Some will find the two tests
a big step, others won't.

> However, it wouldn't surprise me to see Extra eventually become the largest
> class under the upcoming system.

Well, look at the numbers.

Back in May 2000, Extras made up just 11.67% of then-current licenses
held by individuals (78,750 out of 674,792)

Today, Extras make up 16.10% of current licenses held by individuals
(106,900 out of 664,040).

Meanwhile, the combined Tech class percentages have *dropped*:

May 2000: 49.5% of then-current licenses held by individuals were Tech
or Tech Plus (334,254 out of 674,792)

Today: 47.8% of current licenses held by individuals are Tech or Tech
Plus (317,452 out of 664,040)

If you add in Novices, so that you're looking at all the "entry level" licenses, the difference is even greater.

Perhaps you're right, Dee. Maybe the system will evolve to something approaching a two-level system, in that there will be a few Techs, lots of Generals and lots of Extras.

---

I read the FCC document again. Seems very clear to me that FCC's vision for the Technician is that it will have *no*, repeat *no*, HF privileges.
Instead, FCC intends that those who want HF pass at least the General test.

Of course those who have Novice or "Tech with HF" privileges won't lose them. But both existing noncodetested Techs and future ones will have no
HF privileges at all, under the FCC proposal. This is evident from a careful reading of the proposal.

Here's why:

The proposed changes to the rules are very simple.

First, Element 1 would simply be deleted. No more Morse Code testing at all.

Second, the requirements and credits for existing licenses would change slightly. Getting a Tech would require Element 2, getting a General would require Elements 2 and 3, and getting an Extra would require Elements 2, 3 and 4.

And that's about it for changes to Part 97.

The Part 97 verbiage about HF privileges for Techs involves those who have passed a Morse Code exam and retain license documents to prove it. But if
Element 1 is deleted, there will be no way for anyone to pass such an exam, and so there will be no new Techs with HF privileges.

IOW, existing noncodetested Techs *will not* get any HF under the FCC proposal as written.

This is backed up by repeated verbiage in the document about no one getting
privileges without passing the exams. No free upgrades for anybody. FCC also
repeatedly mentions the generous HF and MF privileges that would be obtained
by passing the written for General.

73 de Jim, N2EY

313

btw, the comments of two regular posters to rrap were mentioned in the document.

If you are talking about the US proposal, read the NPRM through a couple of times. They discuss this at great length. Techs will not get Tech+ privileges. Anyone who wants to increase their privileges will have to take a test. They specifically state that no one will get any changes in privileges. That is also consistent with the way the paragraphs will be reworded as shown in the appendix.

Finally, one of the posters on eHam called the FCC on this and asked for and got clarification. He was told that Techs will not get Tech+ privileges. It is indeed the FCC's position that anyone desiring more than their current privileges must take the appropriate written test.

## 57. Re: ARS License Numbers

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-01 22:15:41 UTC
From: N2EY@AOL.COM
Message-ID: <1122934541.463602.62480@f14g2000cwb.googlegroups.com>
Source record: 114408

These are the numbers of current, unexpired
amateur radio licenses held by individuals
on the stated dates, and the percentage of
the total number of active licenses that
class contains:

As of May 14, 2000:

Novice - 49,329 (7.3%)
Technician - 205,394 (30.4%)
Technician Plus - 128,860 (19.1%)
General - 112,677 (16.7%)
Advanced - 99,782 (14.8%)
Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of July 31, 2005:

Novice - 27,975 (4.2%) [decrease of 21,354]
Technician - 269,801 (40.6%) [increase of 64,407)
Technician Plus - 47,651 (7.2%) [decrease of 81,209]
General - 136,167 (20.5%) [increase of 23,490]
Advanced - 75,546 (11.4%) [decrease of 24,236]
Extra - 106,900 (16.1%) [increase of 28,150]

Total Tech/TechPlus - 317,452 (47.8%) [decrease of 16,802]

Total all classes - 664,040 (decrease of 10,752)

Note that these totals do not include licenses
that have expired but are in the grace period.

They also do not include club, military, RACES
or other station-only licenses.

Note also that effective April 15, 2000, new
Novice, Technician Plus and Advanced licenses
are no longer issued.

Since April 15, 2000, FCC has renewed all existing
Technician Plus licenses as Technician. It is therefore
informative to consider the totals of the two classes,
since the Technician class includes a significant
number of Technician Plus licenses renewed as
Technician.

How did they "tie up" the repeater? Did they refuse to let others use
it?

Or would it have simply been silent without them?

> details and the resultant depression. Please?
>
A couple of observations:

First off, with a few exceptions, the subject matter of amateur radio
conversations isn't regulated or restricted by FCC. Unless you can
make a case that the conversations involved violated some provision
of Part 97 or the Communications Act, they're allowed.

Second, I hope no one, including you, ever gets seriously ill or has a loved one in perilous health. May we all live to very old ages with all our faculties intact, and go quietly and peacefully in our sleep when
the time comes.

But in reality, many if not most people have to deal with such health situations. While those conversations may be boring and depressing to *you*, those involved may find them a source of strength, support and comfort. Also information. Would you rather those hams go through such times without the support of fellow amateurs, whom they may have known for decades?

Third, a repeater's owners have the right to shut down a repeater if they don't like the way it is being used, or who is using it. But that didn't happen. Are you one of the repeater's owners, or an authorized control operator for it?

Fourth, almost all of the ham rigs I've seen have both a frequency control and an on-off switch. Use them!

so what?

It is unlikely that you are going to get anyone on the phone able to
speak for the what the R&O will say before even the end of the coment
period

indeed that issue is the only mystery left,

after all we are assued that No one loses previdges as well, and if all the langauge that is said to be delected is delected then the old tech plus folks lose HF access

The lang is badly worded, and frankly I suspect ones reading depends on wether you look at rules in the light all not forbidden is allowed or all not expressly allowed is forbidden

I hope (nearly said I trsut but though better of it) the FCC will make that one point clear in the R&O

Nope. The paragraph that gives Tech+ their HF access is unchanged. Look at the appendix. It shows what paragraphs they are planning to change and what the projected wording is. The Tech+ paragraph is untouched and left to stand as is.

> The lang is badly worded, and frankly I suspect ones reading depends on
> wether you look at rules in the light all not forbidden is allowed or
> all not expressly allowed is forbidden
>

Nope. It is very clear on which paragraphs they propose to change and what the proposed wording is. The paragraph that grants Tech+ the Novice HF privileges has no changes proposed.

> I hope (nearly said I trsut but though better of it) the FCC will make
> that one point clear in the R&O
>>

The problem with the NPRM is simply its extensive discussion, which does get rather wordy but is explicit if one reads it. The revised paragraphs for Part 97 listed at the end of the NPRM are quite clear.

I originally was confused too but comparing the new text to the old text clarified the situation. That comparison put the lengthy discussion into perspective and clarified it a great deal.

Morse had become merely a licensing hurdle, Farnsworth a testing
scheme. Now if anyone bothers to learn Morse, it will be to use it.

Dee:

If the only difference between NC tech, and tech+ is the code, and there is is no longer a code test, would logic dictate that the plus'es can still hold a greater privilege than a tech?

Now, why would logic dictate their being two classes of tech, when there does not exist any difference between the classes? Often you see this kind of insanity when the gov't becomes involved, you could argue that point, and there are no more tech plus licenses being issued, you could also argue that point.

However, I think just as valid an argument would be that tech plus was ok for some HF, now there is no code, so tech is now ok for the same HF allowances.

However, I don't think you are going to find many who would care to argue this point, there just is not enough interest in amateur radio at this point, and the argument is something of a "time sensitive" issue, it would have to be argued quickly--or not at all. As precedence is won by the dragging of the feet...

I still want to hear about his claims to seven (7) hostile actions.

The moment he speaks of them, the Stolen Valor people are going to be
all over him. He's lived in fear ever since his first brag.

> > > > Stebie's posting sometimes read like "Watchtower" clone bad

> Something I will also admit to if you like

Using Steve's rules, he discredits himself, his family name, and
amateur radio.

> > Where were you on that Boy Scout Jamboree, BTW, Brain?
> >
> > Certainly osunds like they ahd some of your "leadership" behind
> > it.
>
> and you pounce on me for spelling?

He's special. Extra Special.

And just like Steve and the Lib press to focus in on BSA errors while
ignoring all of the liberal failures of the last half century. Wonder
if Steve hates the BSA just because I've been an adult volunteer, or if
he was denied an adult leadership position for whatever reason, and
couldn't wear its uniform?

> > > > >> > > Nope. I'd like to carry one meaningful discussions (and

The FCC's logic says "YES!"
>
> Now, why would logic dictate their being two classes of
> tech, when there
> does not exist any difference between the classes?

But there *does* exist a difference!

Techs who have passed a code test have some HF privileges
now - today - under current rules.

Techs who have not passed a code test have no HF privileges
now - today - under current rules.

The FCC makes it clear that they do not want any current
licensee to gain or lose privileges simply because of the
proposed changes.

Therefore, if the proposal is enacted, the two types of
Techs (code tested and non code tested) will continue to
exist, with the difference in privileges, even if there's
no longer a code test, and even after the last Tech Plus
expires, upgrades, or is renewed as Tech.

> Often you see this kind of insanity when the gov't
> becomes involved, you could argue that point, and there
> are no more tech plus licenses being issued, you could
> also argue that point.

It's not "insanity" at all. It's the only way to satisfy
all the requirements listed above.

> However, I think just as valid an argument would be that tech
> plus was ok
> for some HF, now there is no code, so tech is now ok for the
> same HF allowances.

That would violate the principle of no additional privs without
the appropriate test, whoch the FCC repeatedly supports in the
NPRM document.

> However, I don't think you are going to find many who would
> care to argue
> this point, there just is not enough interest in amateur radio > at this point, and the
> argument is something of a "time sensitive" issue, it would
> have to be argued
> quickly--or not at all. As precedence is won by the dragging > > of the feet...

You can argue it all you want. Comments don't close for weeks yet.

If anyone actually bothers to read the NPRM, they'll see that
FCC repeatedly mentions how easy it is for existing licensees
to get more privileges by passing only written tests. FCC also
mentions repeatedly how, if the NPRM is enacted, all nonExtras
will be able to get more privileges by taking a few written
tests. They even mention how many correct answers are needed.

FCC also repeatedly mentions their support for spectrum as an
incentive to upgrading, and how free upgrades act as a
disincentive.

Do you not like the idea of a VHF/UHF-only entry-level license,
with HF held out as an incentive for more *written* testing?

--

Just think - under the new system, all new hams will have access to all
of amateur VHF/UHF, all modes, and full authorized power.

Those who go on to General will have most HF privileges too, with small
parts of 4 HF bands reserved for Extras.

Be careful what you ask for - you may just get it.

N2EY:

I have consistently given the answers for the general ticket, I will continue to do so, I have a study guide for general (put together by another individual) the answers are in it, all one needs to do is dig them out--they should have to work a bit for extra, one only needs study these for an evening, two if they are slow, three if they are a "ma'roon" and go to the examiner and get their ticket... it is a moot point for me... I think the FCC changes are perfect as is...

... all I was remarking on was the insanity which wrapped itself around amateur radio, in the 60's-70's, and has maintained its' death grip, and brought the hobby to its' knees and the sorry shape we find it in today. The leaders we put our trust it have let us down severly, destruction has happened "on their watch!" The correction necessary now is going to be painful but we have only those to blame for it... and ourselves for allowing it to happen without complaint or action...

I suspect this now has all taken a change for the better, we will be on an upswing and we will only see younger guys in control from here on out. If not, at least we are getting people who are capable with handling the changes to get us up to speed in the second millenium (actually 3rd millennium!!!: 0-1000 <<-- first millennium, 1000-2000 <<-- second millennium, 2000-3000 <<-- third millennium) after 2000 years you'd think people could handle changes better and quicker... ahhh, that isn't true either, think if Jesus came back, stood before the multi-million dollar churches and commanded, "Sell these structures and feed my people!" They'd have him on a cross before the evening meal (and his last supper!)

Morse had become merely a licensing hurdle, Farnsworth a testing
scheme. Now if anyone bothers to learn Morse, it will be to use it.

You know something? Your probably right....and actually that is a good
thing.

Well whatever one personally believes, the FCC has made their position clear. The distinction between Tech and Tech+ will remain as it currently is. No code Techs will not have HF unless they upgrade to General. The Techs with code (Tech+) will have the limited Novice HF privileges unless they upgrade to General.

Based on the tone of the FCC's discussion, their goal is to drive people to upgrade. They discussed how upgrading is part of fulfilling the basis and purpose of amateur radio (i.e. the self training part).

Also think of this. Long ago (and before my time in amateur radio), there was so much bitterness over people losing privileges in one of the restructurings that the FCC probably did not want to make that mistake

again. On the other hand, there's been so much hulabaloo about no automatic upgrades that they didn't care to make a mistake by increasing anyone's privileges.

Actually it does make a kind of sense though. This way, everyone will have had to take at least two tests of some kind to get on HF. Besides most of the Tech+ who were both currently active and wanted more privileges have probably upgraded to General by now.

As I've mentioned before, in my classes in the future, I'll be encouraging my students to do that extra bit of study and go straight for the General. Apparently some of the proposals to the FCC did suggest this but they are not ready to go this route just yet.

Of course it's insane.

"The Morse test is no longer required for operation below 30MHz. You can't operate on HF because you've not passed a Morse test." By any measure, that illogical.

KXHB:

I wouldn't even think about allowing someone a radio, unless first they have mastered the "African Message Drum", if all civilization is gone the drum is what they will need to survive.

Much more logical than cw, you don't need a radio! Can make a drum out of a hollow log and a skin off the neighbors cat!

> times without the support of fellow amateurs, whom they may have known
> for decades?

One of the biggest reasons that some hams have a problem with those types of conversations is their *own personal* fear of their *own personal* mortality. And the oldsters with their discussions remind those fearful ones of that very mortality. And they do not like that.

One of the most gripping conversations I ever heard on the bands was one fellow talking to another. He was in the last stages of something or other. But he was wheezing and gurgling on the air. I was fearful that he was going to pass on right there in the middle of the QSO. Real funny stuff, that. Let's go make some hilarious jokes, eh? 8^(

> Third, a repeater's owners have the right to shut down a repeater if

Anyone who would turn off their repeater for *that* is a heartless bastard. The Karma buildup would be very bad - and deserved.

> Fourth, almost all of the ham rigs I've seen have both a frequency
> control and an on-off switch. Use them!

Finally! And good advice.

I do know that one thing that is much more annoying than old dudes talking about their ailments is people that try to control what other people can or can't say on the air.

A simply excellent response, Jim.

People Eating Tasty Animals?

Sure!

But I bet Brian Kelly would know what that Bear looked like before
the trigger got pulled. Of course Lennie knows...he "saw" them years
before they were even in service, which would be pretty astounding
since the old Soviet government kept things like that pretty secret in
those days...

This forum is NOT "Amateur Radio", Lennie...You've said so
yourself.

In as much as you do not now nor ever have held an Amateur Radio
license, you'll never be in a situation that will allow you to make a
first-hand assessment of my operating skills or conduct WHILE
operating.

> > He's a poster boy of what NOT to be in the amateur radio hobby.

And remind me, Lennie...

What are YOUR qualifications to make ANY assessment about ANYone
in Amateur Radio?

> > But, he IS
> > "federally qualified" to transmit RF on U.S. amateur radio
> > frequencies and has a certificate (suitable for framing)
> > attesting to that.

Yep. Since 1972.

And unlike you, I am a radio OPERATOR.

> > After all, he thinks that OBTAINING THE
> > *LICENSE* is the most desireable attribute in U.S. ham radio.
> > He recently said so.

No I didn't. Why do you utter lies like that in an archived
forum, Lennie?

> They sit by silently. One day he will come for them.

Well...Lennie utters lies and Brain echos his sentiments...

What else do I need to validate my assertions of their dishonesty
and culpability in deceit?

Putzii.

## 103. Status of WT Docket 05-235

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-02 05:40:34 UTC
From: LenAnderson@ieee.org
Message-ID: <1122961234.440789.48220@g47g2000cwa.googlegroups.com>
Source record: 114454

As of the close of business on 1 Aug 05, the total Comments on WT Docket 05-235 were 258. Of those approximately 7 were either duplicates (two) or desired an intermediate decision not covered by the NPRM. There were 78 Comments that were against eliminating the morse code test. The remainder, 251 Comments were for the elimination of the morse code test.

The ratio of For versus Against elimination was 3.22:1.

Comments began on 20 Jul 05 with none logged in by the FCC on 23 and 24 July, none on 30 and 31 July.

Not answered.

I asked you for specifics.

"asked and answered" is a lie.

"Answer" with specifics or acknowledge you are either making it
up, or just trying to recall events from memory (and failing in the
attempt)

> > I've NEVER stated that I am on disability.
>
> you were never that clear but you danced around around it enough to
> convince me of it

"danced around around it"...?!?!

BBBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
! ! ! ! ! ! ! !

You ARE the idiot I accused you of being ! ! ! ! ! ! ! ! ! ! ! ! !

> > > your quote supports the impropriety, as in being able to work 40 hours
> > > you clearly should not eleigble
> >
> > Supports WHAT impropriety?
>
> being on disablity and clearly being able to work is improper

And WHO said I am on disability, Mark?

from WHAT public archive did you get this?

> > I am working, ergo do NOT claim ANY "disability".
>
> one I have only your word you are working, and your word means nothing
> to me

Of course it doesn't.

That's because you've publically admitted to and are proud of
being a liar. Liar's don't like the truth.

> two, working does not preclude you from appling for and reciving
> disablity or other public aid...(SNIP)

It does in the State of Tennessee. If you're receiving ANY form
of public aid, any income you make will pro-rate that down. And if
your "income" is from a source that would otherwise indicate that your
public aid is obtained under false pretenses, you're in trouble.

> (UNSNIP)...only makes improper and/or illegal to do so

Sure it is. Why would I violate State and Federal law for less
than $2000 a months when I make almost double and a half that as a
Nurse?

> > So from WHAT source did you glean this information?
>
> your words of some years ago, you cureent behavior, your clear mental
> problems

(A) I never said I was on disability (ergo your claims of
'...some years ago' is a lie)

(B) What in my words here says "I am on disability"...?!?! (yet
another lie of yours)

(C) There IS a person in this forum with mental health issues,
Mark, but it's not me.

> > > I have no reason beyond your word that you are not double dipping, as a
> > > point of fact I believe you are...(SNIP)
> >
> > First of all, you obviously don't know what "double dipping" is.
>
> No I simply don't apply the word as narrowly as you do, as can be
> expected since I am less narrow minded than you

No, you're far MORE narrow minded than I ever thought about being.

> more of Stevie trying to pretend he is a binding authority on english
> cut

No "binding authority"...Just rubbing your nose in yet another
mis-applied "definition" that you heard on some newscast once and tried
(inappropriately) to use here.

> why do you bother with that stevie, I don't accept your "authority"
> surely even you are bright enough to notice

What's "bright enough to notice" is your glaring ignorance of
proper terminology...Or at least terminology as the rest of society
uses it...Your applications are...well...bizzare.

> > > I have not been bringing it up since
> > > then since I don't think it that important, but since you insist I
> > > think you are stealing for the govt monies you are not entitled to
> >
> > Then you've demonstrated what a COMPLETE idiot you are by making
> > such a statement without an iota of evidence.
>
> merely your statements of 7 years no eveidence there

What statements?

You keep refering to alleged statements of mine wherein I claimed
to be on disability.

I call you a liar, Morgan. Prove me wrong.

> > > That isn't libel BTW since I clearly state it is my opinion
> >
> > yes it is, since you allege the perpetration of a felony without
> > evidence, opinion or not.
>
> not at all you simply don't know much about law. otherwise the DNC
> would be broke about now

I know enough to know that you're an idiot, have proven it
repeatedly, and if you ever got it into your pea-brain to TRY an "sue
(me) for libel", the judge's family could successfully sue YOU for
causing him to laugh himself to death!

> > > > Then you claim I am "claiming glory" for a QSO I didn't make when
> > > > I clearly stated that I never made the contact from the git-go.

>
> I accept that is a true statement
>
> However it also shows your lack of mental balance

No, it does not.

It shows that I believe you need to be under the supervsion of
mental health case workers or a vice cop.

And we have YOU to prove it right.

> nothing you accuse me off merits any attention form a Vice cop and I
> suffer from no mental illness as determined by licensed pros

What "licensed pros"..?!?! The "working girls" in Michigan have
licenses?

> > > wether you are or not is another matter but that I have formed that
> > > opinion is a fact
> >
> > You've broken new ground here, Markie. Looks like it't time to
> > have a chat with the folks at Houghton County SO. Someone up there
> > needs to know about you.
>
> not at all, no new ground at all, not even your threats are new I have
> stated my opinions on you quite clearly in the past

No, you've not "stated (your) opinions quite clearly".

They are a blended mess of jibberish interspersed with occassional
lucid lines that, when taken in the whole, demonstrate significant
deficits on your part.

> > BTW...How did you manage to screw up your address change with the
> > FCC so badly? Geeze, Markie, how many time do you think it's necessary
> > to note "PO" box in the address line???
>

> more proof of your stalking
>
> as if more were needed

Nope.

Public records. www.qrz.com. Personally, I think it's
hillarious...A simple one-line address and you couldn't even fill THAT
out without screwing it up...

More proof of your functional illiteracy.

Steve, K4YZ

Nope.

There you go making more accusations that are so readily proven
false, Markie.

Hans quoted every word you wrote.

> and like Stevie you cut again the stement you claim to have quoted
> >
> > Then I proved it false.
>
> you demolised a straw man of your own making

What "straw man"...?!?!

There you go quoting Lennie again, and like your OTHER uses of
"definitions" for which you have no idea what they mean, you screwed
this up too.

> > Deal with that.
>
> as will you

He DID "deal with it"...

Made you look like an even BIGGER fool than you already are...as
if THAT were possible, but he did!

Your foolishness is just like a bowl of Jell-O..."There's Always
Room For More!"

Steve, K4YZ

## 108. Mark Morgan Is An Insufferable Creep

> > questions aimed at you.
>
> More lies Stevie, I refuse to participate in your libeling of some one
> else

Who did I libel?

You need an English comprehension course and some backround work in
basic civil law, Markie.

> > THAT is "evasion".
>
> nope that is honarable behoavot

"honarable behoavot"...

What's that?

(Noting that Mark AGAIN cut out the paragraph wherein I asked him
to prove his assertions but he overtly avoids doing so)

> > THAT substantiates my accusations of "COWARD" directed at you.
>
> nope it shows your lack of Honnor and your cowrdace that you attack
> people not present to defend themselves if they choose

What's to defend?

If your "dontor" is doing what YOU siad he's doing, he's a
screw-up.

That's not MY assessment...it's the AMA's.

> cutting stevie trying to inviolve people not here in his juvi games

What you're "cutting" is direct questions that you refuse to
answer.

> I have said i will play along with your games, to a point, but there
> are points I will not go
>
> Like when you seek to use people not here to play your games

There's no games here, LiarBoy.

For example, YOU alledge that I am "practicing medicine" based on
the following quote

QUOTE

Secondly, if YOU don't take the time to sit down with your doctor
and go over those medications to understand what each one is, it's
benefits, expected outcomes, potential side effects and possible
alternatives to their use, then you're the idiot I have always claimed
you are

UNQUOTE

I've asked you for four posts now to validate you allegation, but
you just keep "ctuuing juvi stiff"..

So...Where's the answer?

From WHAT statement do you draw the conclusion that I am
"practicing medicine"...?!?!

(Hint: I've already written this one off as yet ANOTHER example of you using terminology for which you have NO idea what it means...You just like tryig to use the words in a sentence)

Steve, K4YZ

> >
> > Why don't YOU learn to use proper grammatical construction...It
> > can only HELP you...And it won't hurt a bit.
>
> why becuase you insist I must

Because you're a liability to yourself, your "partner" (whoever he
is) and all around you when you can't communicate effectively

> losing my freedom even slightly to bully and bigot such as yourself
> harms me beyond measure

You are completely free to bully and bigot anyone you please,
Mark...As a matter of fact, you've been doing quite well right here.

And if anything "...harms (you) beyond measure...", it's your own
failure to "do the right thing" and get your problems fixed.

> so we chalk up another lie stevie

Yes, Markie, you've been caught lying again, so go right ahead and
chalk it up.

> ever care to start teling the turth

Sure..go right ahead and start any time. We've been waiting for
you...

> > > why don't you give up you control freak status
> >
> > Seems you suffer from that which you would accuse others of,
> > Markie.
>
> I don't want to control anyone it is far too much work, and as you
> point out I am far too lazy to work that hard

But you do keep trying.

You "control" us by making us wade through your jibberish and try
to put the ends together to a logical outcome.

YOUR problem is that you insist on being stupid and misunderstood.

I am quite sure that other statements you made above were intended
to say something other than what was said, but since you refuse to
exercise reasonable grammatical structure, it came out "bassackwards".

THAT is why you need to fix these problems.

Now...to re-ask a question I asked you in another thread but you
refused to answer with a yes/no response...Would you allow a surgeon to
do surgery on you or a loved one based upon pre-op orders that were
written the way YOU write?

Try to be honest. We're all watching.

Steve, K4YZ

Len,

Thanks for the status analysis.
Will you be doing periodic updates too?

Cheers,
Bill K2UNK

Hey Mark,

I wouldn't call it evolution in action - but perhaps Darwinism in
action! 8^)

The RF isn't ionizing radiation, so it wouldn't mutate any cells,
giving rise to evolvement.

But the idea of holding 5 or more watts if UHF RF against my temple is
a scary one.

Related item. I was on vacation last weekend, and a couple weekends
before that. I was very nearly killed several times by cell phone users
who nearly rear-ended me, were engaged in some sort of animated
argument, and nearly side swiped me, or just generally drove like a

complete idiot.

Seeing as how truck drivers and Hams have been using radios for years and years with out (apparently) nasty incidents, I wonder if exposure to the near field of near GHz radiation makes people temporarily stupid.

I believe that we need to treat people who drive and use cell phones in the same manner that we treat people who drive intoxicated. Proof that an intelligent person can be made stupid by a cell phone would go a long way in that direction.

And, uh, what'd you say *your* callsign was? I, uh, just didn't quite catch it... I'm just asking because it's a generally noted condition of a few major posters in this newsgroup, that if one is not an amateur radio licensee (Len Anderson, for example) their opinions on the matter of amateur radio are taken with a grain of salt.

If all civilization is gone, and you have a drum and a deaf person is around, does it make a sound?

"...that at all"...

What was that? It wasn't a sentence.

> > Hans quoted every word you wrote.
>
> a lie on both of parts

No, it wasn't.

> > > and like Stevie you cut again the stement you claim to have quoted
> > >

> >
> > What "straw man"...?!?!
>
> which straw men you mean

Well here we go again, LiarBoy.

YOU said..."you demolised a straw man..."

Singular. As in "just one"...

"men" is plural.

> you add stuff to any statement

Nope. You do.

Re-read what I just wrote, quoting YOU word-for-word.

> > There you go quoting Lennie again, and like your OTHER uses of
> > "definitions" for which you have no idea what they mean, you screwed
> > this up too.
>
> not at all. It is not my fault or lens that you mind is so limited

There's a limited mind here, alright, but it's not mine, LiarBoy.

> > > > Deal with that.
> > >
> > > as will you
> >
> > He DID "deal with it"...
>
> by making another bald faced lie

Nope. Every word of it true.

> > Made you look like an even BIGGER fool than you already are...as
> > if THAT were possible, but he did!
> >
> > Your foolishness is just like a bowl of Jell-O..."There's Always
> > Room For More!"

As I said, and you PROVED it for me AGAIN.

Steve, K4YZ

> > one I have only your word you are working, and your word means nothing
> > to me
>
> Of course it doesn't.

progress

>
> That's because you've publically admitted to and are proud of
> being a liar. Liar's don't like the truth.

no that isn't the reason Stevie BUZZ another lie

the reason is that I don't trust you because you are an arrogant, lying
peice of shit

>
> > two, working does not preclude you from appling for and reciving

> public aid is obtained under false pretenses, you're in trouble.

more Stevie lies

indeed your stament makes clear you can legaly work and collect public
aid.

and yes I suspect that your income is obtained under false pretenses,
so you shold be in trouble
>
> > (UNSNIP)...only makes improper and/or illegal to do so
>

> than $2000 a months when I make almost double and a half that as a
> Nurse?

Stevie how would I know why you were stupid enough to that. Funny
though that you claim to know how much is involved without ever have
received it

that statement alone is enough to convince you are a fraud

>
> > > So from WHAT source did you glean this information?
> >
> > your words of some years ago, you cureent behavior, your clear mental
> > problems
>
> (A) I never said I was on disability (ergo your claims of

but you did

>
> (B) What in my words here says "I am on disability"...?!?! (yet
> another lie of yours)

you know more about disability than the ARS that is certainly
sugeestive

that you deny it so loudly is another

that you prase your words on the subject so carefully as if to avoid
being caught in an outright lie

>
> (C) There IS a person in this forum with mental health issues,
> Mark, but it's not me.

you have clear mental health issues

very likely OCD for one or one of it's cousins

>

No I don't as a point of facts, I allege statement where you lead me to
believe you are

>
> I call you a liar, Morgan. Prove me wrong.

you call me lots of thing, none of them true why should I care, about
what a stupid, hillbilly, paraniod, with delusions and a hair trigger
tempter and clear mental problems thinks of me (well I should worry he
will carry though on of his threats, and I do a bit)

I said "CITE IT", LiarBoy...not just say I said it.

Failure to produce the alleged comments proves you are lying. The
answers, if they were there, would be right at your fingertips and easy
for you to quote and say "SEE SEE! I was right!" Bu they are NOT
there.

Mark Morgan lying again.

> > > > > > First you alledge that I am receivng public funds for "disability"

Nope. It's a ruse.

You answered nothing.

> > "Answer" with specifics or acknowledge you are either making it
> > up, or just trying to recall events from memory (and failing in the
> > attempt)
>
> More orders Stevie? makes of lie of claims you don't make "demands"
>
> shove it

Uh huh...pretty much what I expected.

No truthful answer...because the whole premise was a lie by Marke
Morgan in the first place.

>
> more Stevie lies

Nope.

> indeed your stament makes clear you can legaly work and collect public
> aid.

How?

Notice EXACTLY what I said, Markie...???

If you DO work and collect ANY "support" money, they pro-rate your
benefits DOWN.

Even if I asked for public assistance (why would I?) I couldn't
qualify.

> and yes I suspect that your income is obtained under false pretenses,
> so you shold be in trouble

Under WHAT false pretenses?

YOUR lying doesn't qualify.

> > > (UNSNIP)...only makes improper and/or illegal to do so
> >
> > Sure it is. Why would I violate State and Federal law for less

> Stevie how would I know why you were stupid enough to that. Funny
> though that you claim to know how much is involved without ever have
> received it

Because I have to deal with people who come to my ER every day who
need help getting that support, Markie. It's called "Case Management".
That's part of what Nurses do. My care for my patients may start at

the front door when they come in, but ti doesn't end there when they leave again.

What? You think I help these people and then just forget everything when I punch out at the end of the shift?

> that statement alone is enough to convince you are a fraud

Then you've proved yourself the idiot I claim you to be.

So much for your claimed "248" IQ, eh, LiarBoy?

Stgeve, K4YZ

Kim:

Well, there ya go, the only people you would consider fitting to converse with have proven they are a ham to you. Of course, this is going to rather limit your social skills and world quite a bit, wouldn't be surprized if you don't know ALL ~300,000 by name (that might be an over-estimate.) Don't worry, why you are there doing "ham sorting" the world goes on, we will keep you abreast of the changes which have occured while you have been engaged in you little diversion.

John

> > '...some years ago' is a lie)
>
> but you did

No I did not. Not once.

Provide a cite, Markie.

(Hint: This will keep you busy for a while since it never
happened...)

> > (B) What in my words here says "I am on disability"...?!?! (yet
> > another lie of yours)
>
> you know more about disability than the ARS that is certainly
> sugeestive

Hardly.

But in either case, I bet I know more about both than you do.

I've been an active Amateur since before you reached puberty, and
helping indigent patients get support, health care and nourishment is a
part of my job.

> that you deny it so loudly is another

I deny it "loudly" because it's not true.

But that you are lying about it and commiting the very "libel" you
accuse others of is grossly apparent.

> that you prase your words on the subject so carefully as if to avoid
> being caught in an outright lie

I don't need to be concerned.

And as for being "careful" about what I say, truth is truth, no
matter how it's phrased.

A lie is a lie no matter how eloquently it's phrased too.

> > (C) There IS a person in this forum with mental health issues,
> > Mark, but it's not me.
>
> you have clear mental health issues
>
> very likely OCD for one or one of it's cousins

So Markie...PLEASE tell us about YOUR dealings with the mental
health infrastructure.

It's very obvious that YOU have had dealings with it...Refering to
your "docs", their "records" and even refering to established diagnosis
by abbreviations with casual familiarity.

THAT'S telling!

Steve, K4YZ

alas the Nazi refferences fit between your Goebelsish effort at
psychological warfare, to your views on the disabled
>
> Of course Lennie should know about The Big Lie technique...He's
> been trying to root it here without success.

root it out

why can't Stevie get it straight?

prehaps becuase he is a closet Gay, as were many Nazi's

>

> hear it, is he still wrong?

Yes!

Then again, why would a man in the forest say anything?

Isn't there a list of things he should be doing? Did he remember to
pick up the dry cleaning and drop off the rental videos on his way to
the forest? For that matter, did he take out the garbage on his way out
of the
house? How about getting those new shoes like he promised he would two
weeks ago? And the upstairs bathroom *still* isn't painted. Honestly,
you'd think he had nothing better to do than go off in the woods saying
things to no one in particular....

ah admiting to being on the dole well thank you

>
> > that you deny it so loudly is another
>
> I deny it "loudly" because it's not true.

no you deny it becuase you think it is improper, meaning that when you
make me think you getting or have gotten it (as you have admited above)
you also admit to doing something improper

>
> But that you are lying about it and commiting the very "libel" you

so?

>
> THAT'S telling!

of what? nothing I have not admited before many times in fact

that you think dealing with the mental health system is somehow "dirty" or something simply shows you a bigot.

OTOH I have no intention of discusing my medical records with you, byind stating that other than some anger issues, there is really nothing wrong with me, and those issues are simply a matter of dealing with them

Indeed it is one the reasons I show up here dealing with such a provoking bigoted fool as yourself, without losing my top is most benificail

There are some spots on 'phone where such conversations go on. 75
meters is
a common place for them. I've never encountered one on Morse Code even
though
I spend far more time using that mode than all the others put together.

Understandable, but not a reason to tell folks to shut up.

Probably emphysema or CHF. Neither is any fun. Two big reasons I never
took
up smoking.

> > Third, a repeater's owners have the right to shut down a repeater if

> bastard.

Agreed - but they'd be within their rights as repeater owners. Then
again,
maybe the folks talking *were* the repeater owners.

> The Karma buildup would be very bad - and deserved.

Yup.

> talking about their ailments is people that try to control what other
> people can or can't say on the air.

What you can't say is pretty well laid out in Part 97 and the
Communications
Act. The rest is pretty much open.

Of course there are folks everywhere who have a hard time gauging their
audience. For example, there are folks on the Internet who can't seem
to
learn to spell, use grammar or punctuation, or even post in the same
style as others in the particular forum. Some haven't even learned that
using all caps is the equivalent of SHOUTING.

And of course there are the folks who will tell you the same story of
their life over and over and over....and over again, even though
there's no point to it and it has nothing to do with the discussion
at hand...

> A simply excellent response, Jim.

Thanks!

why wouldn't you? if you qualify why not get it?

I recieve a certain amount of assistance myself, mostly in the form of
leting someone else pay for new edition of various software that is
supoosed to make my typing easier but never seems to work, indeed I
qualify for such assitance dispite my income

>
> > and yes I suspect that your income is obtained under false pretenses,

>
> But you cut ALL the questions, Markie!

another lies by Stevie I cut many of them yes

and if as I have had to in couple of your posts well it isn't my fault
if you can't ask a question without making a sexaul, or libelous, or
criminal allusions,

>
> > > > I have said i will play along with your games, to a point, but there

N2EY:

It is strongly suggested they don't appoint a deaf person as net control,
however, it is a free country. The hearing disabled may wish to consider
smoke signals, message arrow or carrier pidgeon. If near an ocean,
"message in a bottle" might be investigated.

Well, you guys have your reasons, I guess. The problem is the rest of
us get to observe Steve's and your bar room brawl. While those of us who
would rather not have to read the stuff normally could filter the
thread, we can't do it here because so many new threads are started

every day.

If ya'll would just keep it to a few threads, it would be cool. I much prefer to filter threads rather than names.

And of course, Steve has no intention of "backing down" either. So I guess this is just you folks' "life-on-line". As long as you are all happy, then go for it!

>Len,
>
>Thanks for the status analysis.
>Will you be doing periodic updates too?

Aperiodically, as time here permits.

So far, I've READ each and every Comment posted in the ECFS
on WT Docket 05-235. I've noted which ones were absolutely
FOR code test elimination and which ones were absolutely
AGAINST code test elimination. There are a few "gray area"
Comments which want an in-between state; i.e., code test for
some classes but not others...or the writing is too ambiguous
as to what the commentor is trying to say. The third category
has to be subjectively judged and I "put on my editor's hat"
to gauge those. The first two categories have NO possible
ambiguity since this is a highly-polarized subject and most
are very definitely on one side or the other.

As for approximately mid-afternoon in DC on 2 Aug 05 there
are 55 more Comments, one of which is mine (5 pages worth, but
a small download file, about 30K). Based on previous Dockets,
the ECFS totals are not stable until about 6 PM in DC as the
incoming Comments undergo some kind of human perusal/check
prior to appearing in the final day's listing. 6 PM in DC is
3 PM out here.

A ratio of greater than 3:1 FOR the NPRM is still holding.

dot bye

>Ahhh, good to see such a thing. Restores a bit of faith in humanity. You
>never have to fear the decision of the majority, logic, common sense and
>decency still resides in the overall consensus.

I wouldn't go at it QUITE that way, John. I'll put the BIG THING
on the federal government getting ON the Internet and letting folks
talk DIRECTLY to their government. No longer does one need a
legal firm or other organization to "talk for us" (or, laugh-in-ly,
as a "representative" ex-officio).

Up through the 1980s, "interfacing" with our government HAD to be
done at slow-speed via surface mail OR through some legal
representative. The ARRL helped (and hurt) the "amateur community"
by providing a legal firm on retainer in DC which, in turn,
"presented its case" to the FCC in neat legalistic format. Problem
is that the League HAD CONTROL of this "representative" process
all the way despite their spin that they "represented all amateurs."
They didn't since their membership was never greater than a quarter
of all licensed U.S. radio amateurs and right now is perhaps only
one out of five (have to wait until QST finishes their mid-year
"publishers sworn statement" to get an update on their numbers).
The League is only beholden to its membership and is in no way
obliged to "represent" non-members.

Once the Algore influence on Internet connecting by the government
began happening, we (those who were around prior to 1991 and
after the Internet became public) could COMMUNICATE *DIRECTLY*.
The first taste of this New Freedom for radio amateurs was
probably in 1998 and FCC 98-143, the NPRM on Restructuring.
Surprise, surprise, no more League filtering of opinions, us
citizens got to Comment easily and quickly DIRECTLY with the FCC.
I'm sure the League got a bit of a shock on realizing they no
longer had the CONTROL they thought they had.

Direct communication with our government is pretty much a good
thing despite the rare crackpot stuff that sometimes happens...
and even with "canned" Comments that originate with one author
and are spread around and copied and sent do work. Don't nobody
forget that those work for BOTH sides. :-)

So far, with the ECFS not yet completed for 2 Aug 05, the NCTAs
outnumber the PCTAs by at least 3:1.

>I can go to sleep realizing God is good...

Yes, but lock the doors and windows...a PCTA may be lurking out
there somewhere ready to BEEP you! :-)

out dit

Len:

Well, that is cheating looking at the docket info...

How about you do a little "Len's Crystal Ball" piece--keeping it
up-to-date of course!, kinda give us a glimpse into the future? FCC and
arrl have such boring methods, we have seen them many, many times
before--time for a change and a bit-o-fun!

Warmest regards,
John

Michael cautiously approached his keyboard and quickly typed out, "I
wonder what the point of all this is?", while no one was looking...

When we finally noticed, we wondered?

1) The meaning of life?
2) Is there a "God?"
3) Was our distant ancestor a mud puddle?
4) Is there intelligent life on Earth?
5) What did anyone do which is so horrible the FCC stuck them with a call
including the letters "TIT?"
6) Is this a bi-sexual/gay/lesbian amateur thread?
7) Is Art Bell secretly manipulating the future of amateur radio--with
only his mind?
8) Could the "African Message Drum" make a come back?
9) Are aliens in control of the either?
10) What is Dee cooking for dinner tonight?

... the answers, they are out there, somewhere!
<humming-X-File-theme>

Not really, Mark. It's just that a couple dozen research facilities have NOT YET uncovered anything harmful in low-level radiation in at least 3 decades of study on the subject.

>> But the idea of holding 5 or more watts if UHF RF against my temple is
>> a scary one.
>
>you Have a 440 HT?
>
>and you are afraid of it?

It's a SOCIAL STIGMA fear, Mark. No "real" ham is supposed to have a "shack on the belt" sort of radio.

If a PCTA is seen by other PCTAs using a handheld, he is subject to immediate excommunication. No one is allowed to beep to him again.

>> Related item. I was on vacation last weekend, and a couple weekends
>> before that. I was very nearly killed several times by cell phone users
>> who nearly rear-ended me, were engaged in some sort of animated

Tsk, tsk, tsk. Did Mike get a Warrant for their arrest? Attempted manslaughter is felony in most states.

>> Seeing as how truck drivers and Hams have been using radios for years
>> and years with out (apparently) nasty incidents, I wonder if exposure to
>> the near field of near GHz radiation makes people temporarily stupid.

No, some hams are naturally stupid.

Tsk, tsk. The strongest effect on human tissue of RF radiation is
in the low-VHF spectrum. That is much reduced above 300 MHz and
on up...

>> I believe that we need to treat people who drive and use cell phones in
>> the same manner that we treat people who drive intoxicated. Proof that
>> an intelligent person can be made stupid by a cell phone would go a long
>> way in that direction.

There is considerably more "proof" that ham radio makes supposedly
intelligent persons go stupid just from all the comments in here...

bar nut

>Technician) earlier?

Oh, my, all that SPECULATION and the "bearing down heavily!"

WT Docket 05-235 is about ONE thing and ONE thing only: Delete
or retain the morse code test. The FCC expects deletion but
will not order that until all Comments are done and has reached
a conclusion on the basis of those Comments.

NOTHING in that docket was about "restructuring" anything but
test element 1 statements.

Whatever else anyone in this group has said/pronounced/babbled
about is PURE SUBJECTIVE SPECTULATION.

Tsk, where are all the "insiders" who used to say "exactly
what the FCC was thinking?!?" [ as if... ]

>> And when you consider that the old, pre-restructuring 20 wpm *Extra*
>> was earned by at least one third-grader at the age of 8,
>> it's a bit hard to accept that the written tests are "too hard".
>
>> (OTOH, the same can be said about the code tests...)

Tsk, the FCC doesn't recognize AGE. :-)

WT Docket 05-235 is NOT about license classes, "restructuring"
acts befores or afters, or WRITTEN TESTS. It is concerned
with Test Element 1 deletion or retention.

Tsk, tsk, you people just have NO focus...

>> It gets more and more interesting. Sounds like a rebirth of
>> Incentive Licensing.

Sounds more like you PCTAs have way too much time on your
hands when you cannot understand what 05-235 is about...

> THey better call it something else! ;^)

WT Docket 05-235 is good enough for the FCC. Why isn't it
good enough for you PCTAs?

>> Think about it: FCC saying that it's *not OK* to stay a Tech!?!

Only one little problem: The FCC did NOT say that in
WT Docket 05-235.

><rest snipped>

Just as well. You PCTAs just can't focus on THE important
part of U.S. amateur radio regulations for entering amateur
radio...the morse code test.

bla bla

No. Firstly, you guys don't pay enough...together you can't get up scale (fees). Secondly, there's ten kinds of "insiders" in here all "explaining" what the FCC "is all about." Those get nauseous as well
as repetitive. Thirdly, I go after things DIRECTLY instead of sitting in here all the time and "explaining" things like so many others do.

I've Commented directly to the FCC on 98-143, BPL, and all 18 petitions. I doubt there are any other "regulars" who've had the guts
to do the same...I've not seen them in the ECFS on ALL of those.

b.b.:

Uhhh, we "code tape wizards" and "computer taught b*st*rds" are "out there" (more ways than one, I suppose), and if a code reader can't display it on the screen--we can probably live without those "words of wisdom."

Art Bell said, "CW is dead!" If Art Bell (even more trustworthy than Santa and the New York Times!) says it, Victoria, it is true!

People may not always agree with my opinions, but that's OK with me.

There were plenty of Code Tape Extra's out there who never worked a dit in their lives.

People may not always agree with my opinions, but that's OK with me.

There were plenty of Code Tape Extra's out there who never worked a dit
in their lives.

Of course there were/are. Lots of folks never cared a lick if they actually
operated CW or not. And to them it was a hurdle to do 13 or 20.

But to those select few that actually enjoyed the mode it became a real pain
hearing about how hard it was to learn, how useless, how unnecessary, etc.

Now perhaps the debate will finally END. And those that like CW can
continue to enjoy it. And help those that want to learn it, learn it, and
also enjoy it. And use it and not have to put up with all the whinning any
longer.

That is a good idea Dee. With the massive desertion of V/UHF for HF, it
will be a vast wasteland. Yes indeed, standby for the giant sucking
sound.

All us present users of HF will have to make room, we will have phone all
the way down to 14.010. The FCC will be deluged with demands, yes demands
for more spectrum. Even 11 meters will be turned back into a ham band.

After all that is what all the anti-code is all about, right?

> Technician) earlier?

I'm not sure what you're getting at, Mike.

05-235 isn't just an NPRM, and it isn't just about Element 1. It's
actually FCC's response to the 18 petitions, and denies most of
what was requested, with explanations of FCC's reasoning.

For example, FCC states that they see a 3-license-class system
as the correct number of license classes to work towards. They
specifically deny four-class and two-class suggestions (sorry, Hans -
FCC obviously read your ideas and disagreed).

Yet at the same time FCC doesn't want free upgrades, giveaways, more
complexity in the license structure, nor anybody to lose privileges.

FCC also doesn't see any need for a new entry level license, nor
changes
in the subband structure, nor big changes in the written test methods.

All this is spelled out in detail in 05-235. It's not speculation nor
interpretation.

One by one, almost all the proposed changes are denied by FCC. All that
is left up for grabs is the one remaining code test, which FCC proposes
to eliminate.

As I've said before, I'm surprised it took FCC this long. When FCC
wrote in the R&O for 98-143 that the only reason Element 1 was being
retained was the treaty, the future was pretty clear.

> >>>The only testing difference between a Tech and Tech Plus/Tech-> > with-HF

> > Incentive Licensing.
>
> THey better call it something else! ;^)

Why? FCC specifically uses the term "incentives" and says the primary incentive is spectrum space. They say such incentives will not be removed. In the discussion where FCC denies automatic upgrades and expansion of privileges for various license classes, FCC says such things are disincentives to upgrading.

In fact if you read the document carefully, there's a bit of a tone that says 'how easy do you want us to make it? We're saying we'll dump the code test. If you want the privs, take the tests!'

> > Think about it: FCC saying that it's *not OK* to stay a Tech!?!
> > That upgrading is part of being a good ham and supporting the
> > Basis and Purpose...
>
> Works for me!
>
Yup.

It's clear where FCC wants things to go. Start out the beginners on VHF/UHF,
offering HF/MF as the big incentive to get a General. Those who want those
little pieces of HF and a fancy callsign can go for Extra.

They're also clearly saying that anybody with an existing license will be
able to upgrade by just taking a written test, so what's the problem? Are the
tests really so hard, and VE sessions so difficult to access?

Eventually the closed-off license classes will disappear from the database, and
the rules governing them will be removed.

--

Another idea:

Suppose Element 1 is eliminated, but the number of US hams continues to decline.
What will be the fix then?

Maybe not, Dan.

The license is just the first step. Then comes building a station,
putting up
an effective antenna, getting on the air, learning the characteristics
of the
various bands, etc.

How many folks are actually going to do all that? Particularly during
sunspot minimum?

> Even 11 meters will be turned back into a ham band.

A lot of folks are going to be surprised that all of HF isn't like 11
m.

> After all that is what all the anti-code is all about, right?

We'll see.

---

One report I read is that in Germany, where the code test was dumped some time back, there has been an *increased interest* in Morse Code operation! Apparently a sizable number of newcomers want to use Morse Code, test or no test, simply because it's different, takes skill, etc.

No argument there. My point was that I take exception with the idea that
the HF bands are populated by the type.

Nope. Transmissions are kept short, and I use an earpieces mic almost
all the time. If the earpieces isn't handy, I hold the thing several
inches away from me while I talk.

I'm not particularly afraid of anything. I do take necessary precautions.

First Book of Bokonon, Verses 2-4:

In the beginning, God created the earth, and he looked upon it in His cosmic
loneliness.
And God said, "Let Us make living creatures out of mud, so the mud can see what
We have done." And God created every living creature that now moveth, and one
was man. Mud as man alone could speak. God leaned close as mud as man sat up,
looked around, and spoke. Man blinked. "What is the purpose of all this?" he
asked politely.

"Everything must have a purpose?" asked God.

"Certainly," said man.

"Then I leave it to you to think of one for all this," said God.

And He went away

Yeah I think we won't see any major changes. There will be a noticeable blip in upgrades but that's about it. Actually the fact that it is being implemented at the time of a sunspot minimum means we are at risk of losing hams as they upgrade, find the HF bands difficult and then drop out. We'll really need to do some exra Elmering to help the new people and keep them in the hobby.

I hope so. Again perhaps the fact that the change in the code requirements comes as we approach a solar minimum will affect how people view the code.

Dee:

You might be right, I think I have a defective crystal ball anyway, never has worked with 100% accuracy, not even close :(

However, I have been on CB channel 17--27.165 a lot, informing the truck drivers, they seem very interested, about 1 out of every five want to know more. In reality this probably translates to 1 out of every 10 which will actually do something about it (quite possibly even lower). Still, if word is gotten out effectively, should produce quite a "bump" in new licenses. Those guys carry the word to many states.

Also, first time I catch Art Bell on 3.840Mhz, I will try to get him to mention it on his show (I certainly don't have special influence with the man, but if enough of us prompt him, hey!), the discontinuance of CW, perhaps even give a little chat on the benefits of the hobby, that show reaches millions! He should be able to create quite a "bump" all on his own! Be nice to see him do an hour or so with a couple of hams "friendly" to these new changes and stoke the hype up a bit...

Let's make this "bump" as BIG as we can!

I have posted a flyer on all the bulletin boards at the college too, and an EE professor extra has offered to assist newbies to amateur radio. He has gotten the ok to use the college facilities and even set up some kind of summer course (~1 unit) to prepare in obtaining a general ticket.

We will be keeping our fingers crossed here...

John

Make things *even* easier. It is a time proven fact that if you want to
attract technical people, you have to make things *less* technical.
(detect note of sarcasm)

## 214. Re: What The NPRM Isn't

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-03 01:10:22 UTC
From: John Smith <assemblywizard@gmail.com>
Message-ID: <cQUHe.222$es4.7326833@news.sisna.com>
Source record: 114571

Mike:

At this point, amateur is just NOT that technical...

However, it still can fill one of its' directives it was given, and the hams be ambassadors of goodwill...

Hey, it is a hobby, perfect for the CB'ers. It can be technical--and perfect for the computer communications people. It can go anywhere from here, and probably be multiuse without a problem...

John

Steve said he was discharged from the service early, and either had
therapy before or after the discharge. But he also says he was never
injured except for some sand in his eye, so his therapy must not have
been physical therapy.

The military generally grants disability to people unfit to serve, and
Steve is constantly refering folks to the VA to see his records. Ergo,
Stve must be receiving some disability pension from the VA, even though
he claims he's been rehabilitated.

Steve could clear up any misconceptions, but he would rather call
people liars rather than come clean on his own stories. Steve prefers
to remain an enigma within an absurdity.

I have no problem with folks wanting to use CW. It just pisses me off
when they make claims of intentionally sending code so poorly that a
pimply-faced No-Code Tech with a code reader can't listen in.

My whole beef is not exactly how technical the hobby is or isn't. I have problems with the idea that is trotted out from time to time, about how relaxation or elimination, or whatever, of some technical aspect of licensing is going to attract technical people.

I'd give them a lot more credibility if they said:
We're tired of all the whining about the Morse code test. So Element one goes away. Now would you people get on with your life?"

That would be intellectually honest.

- Mike KB3EIA -

Give it up Willy Weeper. "They" (a single guy) who said that is long since dead, but you keep writing jeremiads on a topic that no living soul remains to support.

And why is it that you continue to hijack my satirical character, Billy Beeper?

beep beep
de Hans, K0HB

(Apologies to Kurt Vonnegut)

To all external appearances, Farnsworth Corners, U.S.A., is bright, cheerful, and happy. However, in dark corners of the city lurk Godless Nocoders who seek to undermine the moral fabric of our mighty Nation.

In a dirty basement apartment, an underfed, seedy-looking old man wearing small, round spectacles and threadbare clothes, types furiously at a musty desk illumined only by a single, naked bulb. As the pages fly through his typewriter, an evil plan gradually emerges: a treacherous treatise which threatens the well-being of the upright citizens of Farnsworth Corners. The work is completed, and the old man leans back thoughtfully and smiles as he rubs the three-day stubble on his chin. The time has come for the Hammer of Leonard to strike!

Some weeks later, in another part of town, little Billy Beeper walks home from school. Suddenly he hears a voice right next to his ear.

"Psst! Hey, kid! Would you like to try my 2M HT? It's free!"

Billy's eyes open wide as he faces the stranger. An embroidered patch on the mans soiled jumpsuit reads "Codefree Charlie". "Gosh, no! N2EY told me never to touch a radio which didn't beep!"

"Aw, c'mon!" says the old man. "I only wanna be friends with you!"

"Well, I don't know," replies Billy. "I was told that FM was bad for you!"

"That's just what the grown-ups say to scare you!" says the drooling man.

"The truth is that they don't want you to try it 'cause it'll make you grow up faster and be able to smoke cigarettes and drink liquor just like them!"

Billy is hesitant, but suddenly a tall form looms before them and grabs the ruffian by the collar.

"Golly!" exclaims Billy. "It's Captain Code!"

Yes, Readers, it's Captain Code: faster than a Vibroplex Blue Racer, more powerful than an Alpha three-holer, able to leap tall pileups in a single bound.

"You should be ashamed of yourself, old man," says Captain Code to the hoodlum. "There are far better ways to earn money than to hoodwink innocent children into a life of codelessness. It's to the FCC for you!

"And as for you, young friend, take my advice and stay away from strangers, and believe nothing that they say. It's tragic, but until Godless Nocodism is abolished from the world, there will always be those who would like nothing better than to hurt you ."

"Gee, thanks, Captain Code!" says Billy. "I promise that I'll always listen to Mom and Dad, and I'll keep away from strangers with shacks on their belt!"

## 226. The Chosen

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-03 02:33:04 UTC
From: K&#65533;HB <groupk0hb@earthlink.net>
Message-ID: <A1WHe.1483$I04.831@newsread2.news.pas.earthlink.net>
Source record: 114577

The Wise Ones live in the depths of the D, E, and F-Layers, and in the usenet servers at Google.com. They are the descendants of the Gods. I personally subscribe to the theory they are the children of Thor Heyerdahl, the Viking god of Thunder and Balsawood Raft Dxpeditions. But that's another story.

The Wise Ones control everything that happens on the air and on usenet, but they can't police every pileup or every newsgroup by
themselves, so every morning, just before daylight over Katmandu, the Wise Ones select the "Mostest Intellegentest DXer" in their layer and convey upon him the title INFLICTOR OF HIGHER MORAL HARANGUES. This title and its duties last until the following dawn on Bouvet, if someone is there to observe the sunrise. Otherwise your duties end when K2ASP gets tired of your crap and sends his lawyers with a gag order.

If you are ever chosen you will know because a representative of the Wise Ones will anoint your temples with oil from a forty-two year old bottle of Dr. Guano, collected on Ocean Island by VR1L in 1963. For that day you will be known as The Chosen. Your duties will be to seek out those that don't do things the way you do them (in other words, the right way.) When you find them, it will be your duty to correct them.

Think about it...too wide, too weak, too slow, too fast, what's your call dammit, wrong VFO, rotten fist, poor pileup control, wrong band, wrong QSL route, you timed out the repeater, wrong lingo, not enough green stamps, you're in the DX window, no-coders not allowed, coders suck, .... They're all yours.

When you find these wayward ones, you will lumber onto their frequency, stand up in your operating chair and shout, I AM SMARTER THAN YOU, SHUT UP AND LISTEN. You will now have the wayward one's undivided attention. He will think about this very briefly, then yield to your superior intellect. He will be very receptive to your thoughts and point of view.

Lecture him and proceed to the next wrong doer.

Now for the sad part of this tale. There are pretenders and charlatans out there who try to usurp the rightful powers of The Chosen. To you villainous few, I say beware. The Wise Ones also created BAWA (Baddest Ass Whats Around). No matter how bad you are, BAWA has the ability to be badder. You will know when you start your lecture and Bawa yells back, "You're a jerk, but I'm a bigger one. LET'S ESCALATE".

And you will have no choice.

But soon BAWA will tire of you and sink your little balsa boat. As you slip under the surface you will yell, "BUT I WAS RIGHT, DAMMIT" and you will once again prove the ancient mariners axiom -- AN OPEN MOUTH TAKES ON WATER.

## 229. Docket 05-235 Scorecard

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-03 03:00:39 UTC
From: LenAnderson@ieee.org
Message-ID: <1123038039.062383.133230@g44g2000cwa.googlegroups.com>
Source record: 114579

THE PLOT THICKENS IN THE NCTA V. PCTA AMATEUR CHAMPIONSHIPS!

As of the close of business in DC on 2 Aug 05, WT Docket 05-235
Comments are:

Total 408
In-Between/Dupes 25*
Against Elimination 122
For Elimination 261

* In-betweeners are those "following" the ARRL plan to scrap code
testing for all but Extras, therefore with feetses in both camps.
Also 2 duplicates (Dupes) appeared in August up to 2nd; two more
on 2 Aug are considered in this category because the writers
appear undecided and/or wanting something else not on the Docket.

Note: Submissions made prior to late-night whatever at the FCC
computer are appearing on that date in the next days search
(the software/procedures may have changed since last year). A
listing made at 6 PM Eastern does NOT necessarily contain ALL
Comments made later on that same day. For that reason I will
be monitoring a day behind and allow the current day's contents
to accumulate. This posting's numbers may not be complete as for
2 Aug 05 (99 total, 13 in-betweener, 30 against) but are complete
for the 9 days up to and including 1 Aug 05.

To date, the NCTA:PCTA ratio has shrunk to 261:122 or 2.14:1
ratio. The number of "in-betweener" Comments has increased
markedly over the first week's Comments; someone may be
pumping up the "ARRL plan" behind the scenes so to speak. :-)
More morsemen are joining the fray in August. Stay tuned.
This is only Day 10 of Comments; there are 65 more days
before the official end of shouting and hollering.

I guess asking you to read what MARKIE wrote was an excessive
burden, Brainless?

And then read from who's decision the comments >>I<< made were
taken from?

> Was Steve on some kind of medical review board to have rendered such an
> opinion?
>
> Isn't that unprofessional?

Nope. It's not my "judgement" that sloppy writing and poor
patient education are evidence of professional incompetence,
Brain...That's the AMA and JCAHO.

Have a nice day.

Steve, K4YZ

Mark never accused DeShawn of anything. Why you say he did?

Who is dis DeShawn?

## 239. Markie Flattering Himself Again

I guess you weren't reading very closely, Markie.

I didn't "assume" anything.

> > As if the three of you "mattered"...?!?!
>
> obviously we do esp to you

Nope.

> > > no he has his own themes as does Len and myself and even todd you are
> > > just so narrow minded you can't see the defferences
> >
> > Obviously he DOESN'T have "his own themes" as he was mimicking
> > Lennie.
>
> not realy you just are too narrow minded to notice

Nope.

He mimick's Lennie's hand. Just like the PuppetBoy I called him.

> > > > Ooooops...Went and invoked the Nazi's again! Not too surprising
> > > > there.
> > >

> > > alas the Nazi refferences fit between your Goebelsish effort at

> > I have all the compassion in the world for the TRULY disabled.
>
> right and you are one nursie empowered to make the judgement

Now you follow suit with Lennie's "nursie"...! ! ! !

> > People like YOU are not in that category.
>
> practicing med with just a ham license again

Who's practicing medicine without a license of ANY kind,
Markie...?!?!

Show your work.

Cite those inappropriate parts, Markie. What "evidence" would you
show to the State Board of Medicine that I was "practicing
medicine"...?!?!

> > > > Of course Lennie should know about The Big Lie technique...He's
> > > > been trying to root it here without success.
> > >
> > > root it out
> > >
> > > why can't Stevie get it straight?
> >
> > I got it right the first time.
>
> nope nor the second or the third

First time. On the nose...and in your case that was a LOT of nose.

> > > prehaps becuase he is a closet Gay, as were many Nazi's
> >
> > Nope...Not closet, open or otherwise.
>
> you sure look and act like a closet Homosexaul

I am sure you have more experience with homosexual lifestyle than
I, Markie, but you managed to screw this up too....

> > > and you insist on making wonder about them and then are not man enough
> > > to admit they are threats
> >
> > What threats?
>
> "One Shot one kill... " amoug others

Four words out of an entire post...Made in response to YOUR
comment "Is that your best shot.."

> > You keeps whining about "threats" but none have been made OR
> > proven.
>
> you made it you don't deny the posting therefore it is Threat and you
> made it therefore it is proven

I don't deny that I used those words, but not in the contect you
try to put them in, Markie...

THAT makes YOUR use of them a lie.

> > Why do you insist on lying?
>
> no lie you threatened to kill me

No, I didn't.

> for something related to code testing

Nope. Not code testing, not your sexual preferences, not your
religious choices or lack of honesty.

You flatter yourself by thinking that I would hazard my freedom by
such an act. It's part of what makes you an insufferable creep. And a
fool.

Steve, K4YZ

## 240. Re: New Morse training tape

b.b.:

They are not "sending code so poorly that a pimply-faced No-Code Tech with a code reader..." can't read it, they are attempting to send so badly that a computer running software coded by one both CW and computer savvy has set up--I suspect they think themselves smarter than the computer... maybe... <grin>

Indeed, a very good programmer would inject "nuances" into the way the app translated his keyboard code to morse, making it virtually impossible for them to tell they were copying automaton generated code, at a very respectable speed! <grin>

I would think it would be a game, an enjoyable one...

Mike:

Building antennas of their own will attract people. Building linears of their own will attract people. Fiddling with feedlines, etc...

Building radios is going bye, bye... the new ones will be PCI cards, USB external devices, etc... your new rig will be a computer with external components...

Human hands, in most cases, are just not designed to create computer cards...

> > >
> > No I did not. Not once.
> >
> sure did

Nope. Never.

If I had, you would have found it and re-quoted it here by now.

You haven't. Neither has Lennie or Brain.

Because it didn't happen.

> > Provide a cite, Markie.
> >
> shove it

I'll take that to mean "I haven't got the prrof, so I'll just tell
you to get lost so I don't have to own up to it..."

> > (Hint: This will keep you busy for a while since it never
> > happened...)
> >
> nope it will not since I have no intention of doing as you demand

It's not a demand.

It's an opportunity for you to prove your point and try and
humiliate me.

But what it REALLY is is me proving that you haven't got a leg to
stand on with this assinine allegation of yours.

> another stevie lie

Another Markie dance around the truth.

> > > > (B) What in my words here says "I am on disability"...?!?! (yet
> > > > another lie of yours)

Nope.

Admitting that I know more about taking care of people who need
help.

> > > that you deny it so loudly is another
> > >
> > I deny it "loudly" because it's not true.
> >
> no you deny it becuase you think it is improper, meaning that when you
> make me think you getting or have gotten it (as you have admited above)
> you also admit to doing something improper

And you're demonstrating that you've got nothing but this story of
yours to hide behind, Markie.

As for how "loudly" something is denied allegedly "proving" how
guilty someone is supposed to be, I'd have to point to YOUR "denials"
about deviant behaviour and mental health issues.

> > But that you are lying about it and commiting the very "libel" you
> > accuse others of is grossly apparent.
> >
> not lying at all

Sure you are.

You've blatantly stated that I am receving "the dole" illegally.

It's not true...Not in fact, not in fantasy. Not under my "real"
name nor any fictional name.

> > > that you prase your words on the subject so carefully as if to avoid
> > > being caught in an outright lie
> >
> > I don't need to be concerned.
>

Why not?

Take up too much bandwidth, wouldn't it...?!?!

> > It's very obvious that YOU have had dealings with it...Refering to
> > your "docs", their "records" and even refering to established diagnosis
> > by abbreviations with casual familiarity.
>
> so?

So I've proved my point.

Thanks.

> > THAT'S telling!
>
> of what? nothing I have not admited before many times in fact
>
> that you think dealing with the mental health system is somehow "dirty"
> or something simply shows you a bigot.

I never said that.

What I HAVE said is that (a) you need help and (b) you're lying
about it when it's very clear that you ARE in the mental health system.

As I said...You have a "casual familiarity" with mental health
terminology.

> OTOH I have no intention of discusing my medical records with you,
> byind stating that other than some anger issues, there is really
> nothing wrong with me, and those issues are simply a matter of dealing
> with them

You have more than "anger issues", Markie.

Anyone who brags about being a chronic liar has deeper problems
than "anger issues".

> Indeed it is one the reasons I show up here dealing with such a
> provoking bigoted fool as yourself, without losing my top is most
> benificail

But you ARE angry. You're ate up with not being able to get ahead
and with people being able to see right through you, even when they
can't see you in person. This includes your "I am a victim" routine
which you use as a crutch.

People try to give you direction, both overtly and covertly, but
you're bound-and-determined to beleive that "how" you are is normal.
It's not. It's an unrealistic assessment of your problems.

As for "provoking" and "bigoted", those are issues of YOUR own to
deal with. Again, they fall squarely into your "I am a victim"
routine.

Not at all. I've never really paid any attention to whether someone has a call or not. Doesn't matter to me one way or the other. I am just surprised you haven't run into that on the newsgroup yet. From someone such as...hmmm, trying to remember who that matters to, usually...Dave Heil, I believe I've seen razzing Len for not being an amateur radio operator. Others...but, was just wondering if it'd ever been an issue.

Oh, and then there's those who raz about people being annonymous, etc. Guess you've not had that happen yet, either. Although, come to think of it...there's not that many of the "regulars" who are communicating with you... So maybe it's still an issue, just not as noticeable as it used to be...

>products now, in anticipation...

<shrug>

>... amateur radio is about to take on a new personality.

Damn good! The OLD personality was getting terminally
geriatric what with all the "pioneering by morsemanship"
triumphed as the Second Coming in radio...in 2005.

>Truckers with extra licenses, house wife's as generals, kiddie techs, the
>possibilities are endless...

John, ANYONE can get a ham license if they want one.

Some PCTA extras have blabbed that over and over and over
again to me.

"TRUCKERS!?" Hell no, they can't go! They used evil,
wicked, mean, nasty, and HIGHLY ILLEGAL CB!!!

cry bye

Tsk, tsk, tsk...the FCC says WT Docket 05-325 is an
NPRM and only intends to do something with Test Element 1.
They are the LAW in regards to U.S. civil radio. Are you
being a LAW-BREAKER?

> It's
>actually FCC's response to the 18 petitions, and denies most of
>what was requested, with explanations of FCC's reasoning.

Tsk. After two years of very NON-consensus-viewpoint
petitioning on a "mere" EIGHTEEN Petitions, you are
now going to give everyone the "real reasons?!?"

Do we congratulate you on your new LAW degree?

The Notice of Proposed Rule Making is quite clear to me.
They provide a lot of material THEY used to reach THEIR
decisions. But, you have the "real reason" perhaps from
the legendary Sylvia Browne's channeling? :-)

>For example, FCC states that they see a 3-license-class system
>as the correct number of license classes to work towards. They
>specifically deny four-class and two-class suggestions (sorry, Hans -
>FCC obviously read your ideas and disagreed).

Tsk. The FCC listed all 18 Petition numbers in the NPRM
heading, throughout the body of the text, and at the end
where they had bold-faced type saying in part either
"...IS DENIED" or "...IS GRANTED, to the exten indicated
herein."

Is that somehow too complicated or are you reading someone's
tea leaves that threaten a deep dark conspiracy?

>Yet at the same time FCC doesn't want free upgrades, giveaways, more
>complexity in the license structure, nor anybody to lose privileges.

Did they ever? [except for the creation of CB which all
God-fearing Hams thought was the armageddon of radio to allow
ordinary non-code-tested civilians to actually transmit on
the sacred HF]

Is ANYONE "losing privileges" if the subsequent R&O reflects
the NPRM?

What IS your beef, little ham?

>FCC also doesn't see any need for a new entry level license, nor changes
>in the subband structure, nor big changes in the written test methods.
>
>All this is spelled out in detail in 05-235. It's not speculation nor
>interpretation.

Tsk, tsk, tsk...you are INTEPRETING all over the place, Jimmie.

>One by one, almost all the proposed changes are denied by FCC.

Tsk, tsk, tsk...read those later pages again, Jimmie.

Only EIGHT Petitions were denied. TEN were granted to the
extent indicated therein. There is NO WAY CLOSE to "almost
all denied" that you state.

> All that
>is left up for grabs is the one remaining code test, which FCC proposes
>to eliminate.

Tsk, tsk, tsk. The FCC still has all those Petitions and
still has roughly six thousand Comments on them. They CAN,
and sometimes HAVE resurrected matters that were once denied
and then granted them at a later time. I don't claim to be
a legal beagle but the HISTORY of many, many decisions is
easily readable by ordinary literate people.

>As I've said before, I'm surprised it took FCC this long. When FCC
>wrote in the R&O for 98-143 that the only reason Element 1 was being
>retained was the treaty, the future was pretty clear.

Jimmie, you have ASTOUNDING retrovision, at least 20-10 in
Hindsight!!! :-)

Tsk, tsk. Turn back the clock just a little ways to 1998 and
check on your own postings in regard to FCC 90-53. Recall
that one? That was about the creation of the NO-CODE-TEST
Technician class. In the year 1990, the FCC said (essentially)
that morse code ability was NO indicator to them insofar as
being licensed. Imagine, a mere 15 years ago.

>It's clear where FCC wants things to go. Start out the beginners on VHF/UHF,
>offering HF/MF as the big incentive to get a General. Those who want those
>little pieces of HF and a fancy callsign can go for Extra.

Tsk, it's NOT CLEAR in WT Docket 05-235. That NPRM is ONLY about
deletion of the morse code test. There is NO "treaty" thing
[ITU-T S25] that says all administrations MUST give morse code
tests to license applicants who with below-30-MHz privilege
licenses.

"Beginners" (what you PCTA extras call your "lower classes")
were once the NOVICE class licensee. Remember them? That's
what the "Novice" name means, isn't it? Novices had some HF
privileges. But, long after their creation, the Novices were
DROPPING OUT. Those Novices MAY have upgraded, but it's
obvious not all were doing so...and NEWCOMERS were NOT getting
in via that Novice route! Then, in 1991, the "no-code" Tech
license got granted. But, under that "treaty" (the OLD S25)
they could NOT OPERATE BELOW 30 MHz! S25.5 was not changed
until 12 years LATER. [amazing but true...it is history]

The "no-code" Tech class license proved to be IMMENSELY
POPULAR to "beginners" and even those with years of radio
experience in OTHER radio services because there was NO code
test! [that may be hard to believe for you but it is true
and IS history in the FCC databases] Popular enough that
(roughly) 200 THOUSAND no-code-test Technicians joined the
"amateur community" (on the outskirts in the ghettos where
you PCTAs think they belong). The Novices (the original
beginners) kept on dropping in numbers, dropping, dropping
until - finally - an Epiphany of Reality dawned on the
Newington gods of radio and they "officially" dubbed the
no-code-test Technician class the ENTRY CLASS! [not as
a "beginner" or other lowly term you elitists love, but
ENTRY CLASS]

The NPRM does NOT change/alter/modify ANY OTHER regulations as
to class, nothing at all but the regulations about the MORSE
CODE TEST. That is ALL that WT Docket 05-235 is about.

Try, please TRY to understand that. Others do, why can't
you?

try cry

Brian, those extras CANNOT "be told" much of anything.

You are absolutely correct, but reality is usually
irrelevant in HERE. In HERE the PCTA extra thinks they
rule. Stebie is a PCTA extra...one of the 'hood (and
acts like it)

PCTA extras ENDORSE and even ENCOURAGE Stebie.

I don't understand it. I feel sure that morse beeping
does something to their brains, making them very UNLIKE
normal, civil human beans. PCTA extras are "BAWAs!" :-)

Kim:

Ahhh, I think the old guys who used to have to worry about winding a filament choke for an old tube PA are still worried. Indeed, there are probably some around who remember when the filament used to be the cathode! Perhaps they even worry more...

There eyes are not as good as they used to be, probably from trying to read news papers from the purplish-bluish glow of gassy finals. Maybe they just can't read the text here anymore.

Kim, don't you ever wonder who setup newsgroups for them on their computer, isn't pretty obvious they could not? Who then, grandkids?

Some of these old guys probably even remember very old and ancient tubes, where thorium was included into the filaments metal to increase electron emission, and to "rejuvenate" the tube you would have to run the filament at an increased voltage to over-heat and to get some of the thorium to come up to the surface. Not long ago (decade or two) this was still being done on TV cathode ray tubes, some oscilloscope crts could be rejuved the same way...

That was the lair of these old brass pounders, around equip and practices which is now only found in museums--and old hams shacks...

Wonder a NC Tech (and a woman even!--with a "hard to pronounce call!"--something like "Lake Titicaca?" <grin>) can survive here, don't they tend to "use up all the air in room", leaving one wanting for outside and a fresh breath of air?
<grin>

Source record: 114608

Here's my submission to the FCC.

Can we have just post our comments here and take the editorials to
other threads, Ladies and Gentlemen?

73

Steve, K4YZ

Ladies and Gentlemen of the Commission, Greetings,

The issue of whether or not to remove Morse Code competency
testing has been a heated and hotly contested issue for years. Many
persons cite the evolution of new technologies and methodologies of
communications as having made Morse Code "archaic", while on the
otherhand some demand it's retention as "traditional".

There is certainly precedent for allowing Amateurs access to the
HF spectrum (below 30Mhz) without Morse Code competency, however this
respondent believes that dropping it completely will be an overall
detriment to the Amateur Radio Service.

The Basis And Purpose of the Amateur Radio Service as outlined in
Part 97 provides that the Amateur Service shall provide a trained pool
of radio operators for emergency service. And technology
notwithstanding, Morse Code remains the simplest, most easily deployed
communications mode available to Amateurs worldwide. To drop this
requirement simply because military or commercial users no longer use
it is foolhearty.

However I am in favor of allowing access to the HF allocations
without the benefit of a Morse Code examination with the restriction
that non-Morse tested Amateurs not be allowed access to those parts of
the spectrum wherein voice (wideband) modes are not permittted.
Without the basic skills of being able to recognize whether or not they
are potentially interfering with other communications, the non-Morse
tested operator should be restricted to areas wherein they will have
less likelyhood of causing such interference.

I thank you for this opportunity to participate in the rule-making
process.

STEVEN J ROBESON, LPN
Amateur Radio Licensee K4YZ

An interesting aside in the NPRM says that, in another separate proceeding
in another NPRM, the Novice subbands will be eliminated, and all Novice and
Tech+ hams will have the General subbands on the bands where they have
privileges. Presumably on 80/40/15 they really mean only the General _CW_
subbands, but on 10 they would apparently get the whole band.

Oddly, though, both these licence classes would be closed, so that no-one could get a new one. I suppose it does make sense, as it would be idiotic to preserve the Novice subbands only for closed licence classes.

>
> Sheesh!

Oooops...forgot to mention, The last footnote in Lennie's
comments:

"Any change in the license examination regulations will primarily
affect license applicants. That does not directly affect those already
licensed and have already passed any test given under older
regulations...despite the displayed spite in a few Comments who had
worked hard to pass the morse code tests and are disturbed that
applicants in the future might not have to do the same. The Commission
is in no way responsible to hold thigs in perpetuity or to insure
feeding of emotional sustanance to those already licensed.

Of course his comments were laced with the usual amount of
"mythology", "tribal" and other insulting inferences that we have
become used to here.

The biggest lie being his suggestion on page 1 that he was a
potential Amateur Radio licensee.

Too bad there's not a method for filing charges of perjury on
filings.

Steve, K4YZ

## 263. RRAP Regulars A No-Show for WT05-235 Comments

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-03 10:15:45 UTC

Source record: 114614

Well, well, well.....................

After I posted my comments and recovered from laughing at Lennie's predictably pessimistic and mistruthful diatribe, I started to look over some of the other comments.

Then I decided to just cut to the chase and search by names for the rest of you.

Other than myself and Lennie, I only found ONE other semi-regular of this group had cared enough to comment: WA2ISE.

Missing? K0HB, W5TIT, N8UZE, W5DXP, K2UNK, N2EY, AA2QA, K3LT, W3RV, KB9RQZ, N0IMD, WK3C, W1RFI, N3KIP, KC2HMZ, K8MN.

Sooooooooooo......

Where is everyone from BOTH sides of the aisle?

On another note, I notice both Maia and West haven't said a word either...guess they figure they'll sell books one way or the other...

I found it took a couple of readings AND getting out my copy of Part 97 and doing a comparison to have confidence in my conclusion. By the way, it's not a bad idea to keep a copy of the current Part 97 on hand. A person tends to forget those areas that relate to activities that they only do occasionally. I always have to look up the rules on digital since I only hook it up every couple of years.

Steve,

W5DXP, K3LT, WK3C, and W1RFI haven't posted to rrap in a long time.

Cecil decided to focus on antennas soon after the 2000 restructuring.
He said in here that 5 wpm was the right level,
he resigned his NCI membership and went on to other things.

Larry's work and other interests caused him to spend his time
differently.

Carl has shown up once or twice but his main focuses have been
his job, house, anti-BPL and NCI duties. Heck, he was so busy it
took him a year to get his Extra and vanity call.

Ed has been focused on fighting BPL. He's also an ARRL staffer, so he
may prefer not to even give the appearance of a conflict.

> Sooooooooooo......
>
> Where is everyone from BOTH sides of the aisle?

It's only been a few days. There are weeks to go yet.

Look at the responses - most of them are "Brief Comments", meaning a
short yea or nay. Many are embarrassing in their
poor spelling, grammar, capitalization and punctuation. Better
to spend some time proofreading and polishing.

There's also the perception some have that the whole thing may be a
done deal already.

Suppose the majority of commenters want code testing to stay, either as
it is now or maybe just for Extra. Will that make any difference at all
to what FCC does? Back in 1999, a member of NCI read and tallied up the
comments and found that the *majority*

wanted either two or three code test speeds. Yet FCC went to 5 wpm
only.
>
> On another note, I notice both Maia and West haven't said a

And no doubt that many people will. There will probably be a larger percentage that do not, as the requirements ease. Soon a good "test-taker" will be able to get that license with a lot less effort. There will be a lot of casual Extras.

No big deal, but it *will* be a side effect of the new testing requirements.

Me personally. I don't have a problem with someone who is, even, entrenched in tradition of something, which is pretty much what it seems you're describing in the paragraphs above that sentance there and that sentance. I don't know how to plumb a house, install wiring for electricity, rebuild a transmission, diagnose and treat my self medically, etc. And, I don't begrudge the people who do for having some pride in the tradition of "their" ways (whomever "their" may be). Where I do have a problem--and I don't see it much anymore, save a few idiots, is where that pride in tradition translates to some kind of inalienable right to belittle others for getting there differently and choosing to walk to the beat of a different drum.

>
> That was the lair of these old brass pounders, around equip and practices

And, what a wonderful thing that is. I am also in awe of the memory of people who forged this country on foot, horseback, train, early cars and dirt roads and now shoot themselves into space with all the threats to life and safety that is attached to that.

I gave up on RRAP being any usable place for ANY kind of debate
other than flame throwing and frustration venting years ago, Mike.
There are occassional sidebars that are actually informative, but they
are so few and far between, and usually usurped by yet another
LennieRant as to make it ineffective as any discussion group.

I've started a few threads on different policy issues before (as
have others with sincere intent)only to have it drawn into Lennie's
"It's a Might Morsemen Conspiracy" mode within a few posts...

So...the NG isn't good for what it was intended...might as well
use it for what it is good for...

Mudfight!

You'll probably only see Fred's comments via the NCVEC comment
when that gets agreed to within the NCVEC groups.

Cheers,
Bill K2UNK

Kim:

Good post, I can't disagree with much there. People are funny, no accounting for some of their views, beliefs and ways, I guess.

One thing we can hold faith in, if some strive to hold back progress as much as it looks like the are to me, I believe strongly they will only fail. As, anyone over-looking our past can plainly see, the only thing which has truly been consistant is the push forward, always on to new technology and better hardware and methods.

Some fear tomorrow, some can't wait for it to get here...

Michael:

Strange, fearing old hams which must lurk in shadows hoping the youngsters will fear them out of past deeds of glory. I suppose people always have a fear of the unknown, as long as you don't know the evil--it takes on a grand size and threat...

Naaa, I think they fear change. Even they know it is inevitable, Mr. Anderson...

Well, Bill. I am not sure that a kind of public indictment of people who've
not chosen to submit comments to something is all that democratic ( :o);
but...

I am, admittedly, a ham who is not all that active. I also *used* to be
more affected emotionally by issues of CW and ham traditions than I am now.
Maybe chalk that up to having spouted off to people like Larry, etc., for

long enough that I've lost sail...LOL I have opinions on the service, the hobby, etc. But, I choose not to try to "affect" ham radio by way of my comments to NPRMs (that is, unless there was some kind of something that truly affected me emotionally) in things that I am OK with going either way and this one, I am. I think it's probably something along the lines of consensus. I may have an opinion of my own, but I am willing to step aside and yield to the prevailing group.

nope I never said that

I said 3 things

1 that you have claimed a public support,

2 that if you are not lying then then I belive you doing something
improper, possibly ilegal

3 that isn't clear exactly how you are doing it

you keep making stuff up or over simplifing statements

>
> It's not true...Not in fact, not in fantasy. Not under my "real"
> name nor any fictional name.

BUZZZZ

If I am wrong then it is ture in fantasy

thou doth protest too much

never said but that your meaning more or less

>
> What I HAVE said is that (a) you need help and (b) you're lying
> about it when it's very clear that you ARE in the mental health system.

nope you can't get it right even now

I have had dealing with mental health

but currently I don't need their help

nor am I getting it

more stevies lies

cuting more stevie shit

> > OTOH I have no intention of discusing my medical records with you,
> > byind stating that other than some anger issues, there is really
> > nothing wrong with me, and those issues are simply a matter of dealing
> > with them
>
> You have more than "anger issues", Markie.

nope not according to thoose licensed to know

>
> Anyone who brags about being a chronic liar has deeper problems
> than "anger issues".

don't brag about about it, simply adknowledge the truth since

>
> > Indeed it is one the reasons I show up here dealing with such a
> > provoking bigoted fool as yourself, without losing my top is most
> > benificail
>
> But you ARE angry. <cut>

I am not angry. I get angry at times with your lies and bigotry but it
passes you mostly make me laugh with your abusrdites

<cut> You're ate up with not being able to get ahead

get ahead at what? Life? I have my own home 2 vechiles, no debts, a satisfing relationship, now victory is cause I have fought for for years. Sure I could find uses for a some money but I doing fine, and all with resources that means I don't don't need to work more 5 hours a week roughly, and that "work" is almost play as well. I call that being ahead

> and with people being able to see right through you, even when they
> can't see you in person. This includes your "I am a victim" routine
> which you use as a crutch.

you know very little about me, indeed and what you should know by now you can't accept becuase it unsetlles your way of "thinking"
>
> People try to give you direction, both overtly and covertly, but
> you're bound-and-determined to beleive that "how" you are is normal.
> It's not. It's an unrealistic assessment of your problems.

Stevie you are nuts

of course how I am is normal for me part of the meaning of the word normal

I have a problem of two being that I, without huge effort express myself poorly in written form. That is unfortunate. It is not as you insist a mental defect esp not a simply correctable one, years in my youth dealing the mental health system taught me that

>
> As for "provoking" and "bigoted", those are issues of YOUR own to
> deal with. Again, they fall squarely into your "I am a victim"
> routine.

nope they are you being a Bully indeed I have no realy with Jim he doesn't bully me. I have issues with Dave, but that is becuase he is a jerk not a bully.

I know you are a bully because I watch you bully everyone you disagree with, not just me. that tells who is seeing thing straight

> > right and you are one nursie empowered to make the judgement
> >
> Now you follow suit with Lennie's "nursie"...! ! ! !

that you are nurse making medical judgements is not follow len's lead
but your own

and if anyone following a lead it is len following mine from years ago,
when first Started calling you on your nurse acting as doc routine

you can't even keep your lies straight

>
> > > People like YOU are not in that category.
> >
> > practicing med with just a ham license again
>
> Who's practicing medicine without a license of ANY kind,
> Markie...?!?!

not me I have a ham license same as you

>
> Show your work.

do your own work

>
> Cite those inappropriate parts, Markie. What "evidence" would you
> show to the State Board of Medicine that I was "practicing
> medicine"...?!?!

I would dump your posts esp the one where you boasted that at a VE
session you rejected a code waiver signed by a doc claiming you knew
(without test or exam) that is was a fraud

>

> >
> > First time. On the nose...and in your case that was a LOT of nose.

not at all

you are the one using the biglie and you keep repaeting it and
repeating it just as the manual says

however people trained and thinking can spot it miles away

>
> > > > > prehaps becuase he is a closet Gay, as were many Nazi's

> > > > Nope...Not closet, open or otherwise.
> > >
> > > you sure look and act like a closet Homosexaul
> >
> > I am sure you have more experience with homosexual lifestyle than
> > I, Markie, but you managed to screw this up too....

nope

the more a person goes on about it the more likely they are concealing
homosexaul desires

simple facts

and of course I know more than you in this matter by your words

You are repressing homosexaul desires that is certain from your
writing, ref Dr Kinsey the standard in the feild

how much is hard to say without further contact (which I have no desire
for)

>
> > > > > and you insist on making wonder about them and then are not man enough

> > > >
> > > > What threats?

> >
> > "One Shot one kill... " amoug others
>
> Four words out of an entire post...Made in response to YOUR
> comment "Is that your best shot.."

and you still are not man enough to admtt it is threatening

and it was since you insit
"One shot one kill even in illiopolis" being the only person you know
in that town well that is a threat

>
> > > You keeps whining about "threats" but none have been made OR
> > > proven.
> >
> > you made it you don't deny the posting therefore it is Threat and you
> > made it therefore it is proven
>
> I don't deny that I used those words, but not in the contect you
> try to put them in, Markie...

I agree I said is that your best shot but you decided to add the part
about killing
>
> THAT makes YOUR use of them a lie.

nope the language was and reamins a clear threat

you further recently add the threat to vist the UP

>
> > > Why do you insist on lying?
> >
> > no lie you threatened to kill me
>
> No, I didn't.

sure did and you keep repating the threat

>
> > for something related to code testing
>
> Nope. Not code testing, not your sexual preferences, not your
> religious choices or lack of honesty.

the subject at the time was code testing your were called to take a
beter shot at supporting code testing, instead you threatened murder

Law enforcement agrees it was threat but doesn't take the usenet
seriously, although the officer did call severl times over the next few
days just tosee if you had acted on your threat

>
> You flatter yourself by thinking that I would hazard my freedom by
> such an act. It's part of what makes you an insufferable creep. And a
> fool.

it isn't flatterery.

It is you being stupid to even type that

yes I would rather take a threat more seriously than t deserves than
have my family and friends end up dead, any real man would see that

>
> STEVEN J ROBESON, LPN
> Amateur Radio Licensee K4YZ

interesting that it says almost of relavance since it never deals with
the real issue of regulation, that being the Public interest,

and sugesting that HF access be allowed but only where digital mode
that these new folks are suposed to be bring a revolution makes it a
fraud

as well one does not need to to be able to read a morse coded CW
tranmission to hear that it is there, and from what I read pactor and
other mode are stumping on CW at times already in the hand of code
tested hams, therefore code testing is proven ineffective at stoping
this "problem" (I use the word graudly since I lack first hand
knowledge of the nature and frenquency of the "problem")

Sorry folks, but I simply had to cross-post this gem of
a posting from rec.radio.cb to the ham radio groups.
I can easily imagine some of the goofballs and kooks
I saw at a certain hamfest last week trying this on 75M
after reading this. *If you do guys, remember that a
good ole traditional METAL garbage can, like a trusty
galvanized Wheeling Mfgr Corp model, available at any
home depot for modest cost, would work FAR BETTER
than any of the Rubbermaid plastic model(s)* Also remember
that when you fart inside of a said can with the same propped
over your head down to your lower torso, the sounds produced
will be AMPLIFIED by a factor of twenty or so and you can
get a breath of 'fresh air' while you're at it.

GO FER IT BOYS !!!!!!!!!

# 303. N9OGL to comment on K1MAN RENEWAL

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-03 17:40:54 UTC
From: N9OGL <toddaug555@yahoo.com>
Message-ID: <1123090854.030197.141240@g43g2000cwa.googlegroups.com>

---
N9OGL IS WORKING ON A FILING TO COMMENT ON K1MAN RENEWAL
---
N9OGL is filing a comment to the Federal Communication Commission on the renewal of K1MAN's license. N9OGL is filing the comment not for nor against K1MAN but attends to raise some questions about the recent petition for deny for NO2K1MAN and the recent NAL from the FCC to K1MAN. The comments N9OGL is filing deals with Interference, pecuniary Interest, and Broadcasting. Some of the questions N9OGL is asking the FCC is "If K1MAN is interference is illegal (he begins in show on top of on going Communications, then why hasn't W1AW ever been complained about? It seems that amateur's are "picking on" his station, when in fact there is documents that W1AW has done the same thing. N9OGL also raises concerns over K1MAN pecuniary interest. Amateur Radio is a non-commercial service, yet unlike other NON-COMMERCIAL services aren't allowed to make any money, N9OGL want's to know the rational behind that. noncommercial broadcast stations are allowed to make money to sustain the station with contributions from listener, Public-Safety is given funds from the State and the federal government through taxes, which is used to by new radio's and other communications.
non-commercial often means in radio as a service that doesn't make a profit but get aid to sustain the station. K1MAN may have been using pecuniary interest "direct" but, at the same time W1AW which is owned by the ARRL is doing it "indirectly" the FCC rules state a station can't have any pecuniary interest direct or indirect. But when a short-wave listener hears W1AW they will go to internet and look it up and it will lead them to the ARRL website which sales all sort of good.
Finally N9OGL touches on K1MAN's information bulletin which amateur believe is a broadcast because it is opinionated. N9OGL want's the FCC to point out the rule that states an information bulletin cannot be opinionated, and secondly how does that rule conform to Section 326 of The Communication Act of 1934, and the MANY court cases that the federal courts, and even the Supreme Court has stated that the FCC can not have content-based rules. Because the vague rules and definitions on information bulletins and broadcasting in the amateur bands can be, and have been used by both amateurs, and The FCC to control the content of amateur radio stations, in clear violation of section 326 and the First Amendment.

Yup.

Kinda like the Rush Limbaugh show. I listened for several months, and
then I knew exactly what he was going to say on any given topic. So I
didn't have to listen any more.

I still read every word the lad writes though. Then I simply choose not
to respond. Kinda like a zen revenge, I guess! ;^)

Lloyd:

My gawd man, K1MAN is a GOD! He cannot be judged as a mere mortal!

If he wasn't posing such a danger to the "arrl enterprises, inc." he would probably have a write up in Forbes Magazine.

His best trait is throwing some light on the arrl and perhaps awakening the brain dead to the fact arrl needs a severe "hand slapping" and restructuring.

However, I think the sorry state of things is that those who already have the gray matter are already pi$$ed at the con job, the others will never know.

Funny you should mention it. I filed mine today, as follows:

BEGIN QUOTED MATERIAL
**********

Mr. Chairman and Commissioners:

Following are my comments relative to proceeding WT 05-235, In the Matter of Amendment of Part of the Commission 's Rules To Implement WRC-03 Regulations Applicable to Requirements for Operator Licenses in the Amateur Radio Service.

There have been many arguments posed in favor of eliminating the telegraphy requirement for an Amateur Radio license. I see no reason for me to rehash all of them at this time. Simply stated, it is my considered opinion that continuing to test for Morse proficiency as a prerequisite for licensing in the Amateur radio service is not in the public interest. Furthermore, the requirement serves no useful regulatory purpose, and is not consistent with the goals for the Amateur Radio Service as stated in the Basis And Purpose section of the Commission's rules set forth in Part 97.

Therefore, I support the proposed rulemaking to the extent that it would remove the telegraphy requirement for all license classes in the Amateur Radio Service.

I would also like to comment on the matter of operator privileges to be assigned to the various license classes in the event that the telegraphy requirement is removed. In my opinion, the current written examinations for the Novice, Technician, and Technician-Plus license classes do not, in my opinion, insure sufficient knowledge to safely operate an amateur station consistent with the privileges of the General Class license. The material covered in the General Class written examination simply is not covered in the exams for the Novice, Technician, and Technician-Plus classes. Therefore, I concur with the Commission's proposal to retain operator privileges for those classes consistent with those currently in effect. I state this with the realization that subject to the further modification of those privileges that would result from the separate proceeding and NPRM regarding the Phone Band Expansion, licensees holding those classes of license stand to receive a significant gain in operating privileges. I do not feel it is in the public interest to grant automatic upgrades to higher license classes without requiring applicants for those higher license classes to pass the appropriate written examinations. I also do not see a need for adding any new classes of amateur radio license. The reorganization of the Amateur Radio Service that took effect in the year 2000 has already dealt properly with the number of available license classes.

Finally, I agree with the Commission's proposal to refrain from enacting any rules changes intended to more closely regulate the content of the written examinations. Applicants who pass one or more written examinations qualify for either a new license, or an upgrade to a higher class of license. As noted by the Commission in the NPRM, the purpose of the written examination is to insure that the applicant can safely operate a station. The written examinations are not, and were never intended to be, tests of an applicant's technical level or operating skills, other than those necessary to safely operate an amateur station while said applicant is developing his or her technical and operating skills. In other words, passing the exam is the beginning, not the end. Successful completion of the examination causes the applicant to be granted a license, which bestows certain privileges depending on the class of license that is granted. It is what the applicant does with those privileges after they are granted that demonstrates his or her technical level and operating skills. In fact, it occurs to me that, if one were required to be an electronics expert prior to obtaining an amateur license, then participation in the Amateur Radio Service would not be a viable means of training skilled operators and advancing the technical skills of those operators. This would not be in keeping with the Basis And Purpose of the Amateur Radio Service.

In closing, then, I find myself in complete agreement with the proposed changes to the Commission's rules as stated in the NPRM. I would like to express my appreciation to the Commission for it's attention to this matter, and also, in no small part, for having "gotten it right" so to speak. While I am sure that this proposed rulemaking will generate considerable distress for some, I can say as

the current holder of a General Class Amateur License that the
Commission's proposed action on this matter is in the public interest
and is in keeping with the Basis And Purpose of the Amateur Radio
Service.

Thanks you for the opportunity to participate in the regulatory
process governing the Amateur Radio Service. I look forward to the
Commission's eventual Report & Order on this matter.

Sincerely,

John D. Kasupski, KC2HMZ
Tonawanda, New York

**********
END QUOTED MATERIAL

If anybody is having trouble with the ECFS telling you the matter is
not open for commenting, be advised you cannot enter "WT05-235" in the
"Proceeding" field on the cover sheet. Just enter "05-235" without any
WT or FCC or anything else and it should work just fine.

Hello, Steve

At age 58 and having lost my job in early 2004 (have had a couple of contract jobs), I've been *very* busy. To the point of not being nearly as involved as I should be with a number of Yahoo groups, some of which I moderate.

I am not really concerned about Morse code; only the arrival of folks that simply want to scream the loudest (with a big splatterbox). Others are trainable.

I've gotten to the point around here that if someone parks near my house with one of those ghetto-blasters running in their car or van, I open my windows and turn the entertainment system on pretty hard (6 Bose speakers and several hundred watts). Last time, the idiot turned of the car stereo and I had four pictures to pick up off the floor after shaking the whole

house.

So, if I can manage to find a decent, permanent job, my next move will be to get a decent HF rig and make sure the thing is set to cw regardless of the frequency (60 meters excepted LOL).

Jim:

Oh yeah, the CW was flying there--more furious than chickens feeding in a tin trough, you could copy the comments in CW at the same time you were following the phone. It was some confusion all right, you didn't know which to follow more closely, cw or phone, they were both quite entertaining... it really never got heavy enough to have to cut in the cw filter and drop the morse... the guy they were beating up on was a newbie, the comments in code had me in stitches... the newbie would only once in awhile get that conversation... it all ended on a lower pitch than tempers had peaked at...

I haven't dropped in on arts' little corner in quite awhile, now I am going back every night at ~10:30 PM PST and copying the mail, art hasn't shown on the nights I have been there--during the times I have been there, it is much more interesting when the master himself is present...

If you can't sleep, check it out, couple of nights now the goings-on have been entertaining enough to keep your interest--and then some!

It is a simple fact, Mark, but not the one you present. The fact would be that homosexuals often accuse their opponents of being 1) homosexual or b) homophobes (a vey inaccurate term sine it implies fear, rather than disgust or revulsion).

> and of course I know more than you in this matter by your words
>
> You are repressing homosexaul desires that is certain from your
> writing, ref Dr Kinsey the standard in the feild

Is that the same Doctor Kinsey who was repressing his own homosexual desires? Some standard! We have a homosexual who is repressing homosexual desires, stating that those who deny being homosexual are simply repressing their homosexual desires.

To steer the matter back to the world of amateur radio, Mark, let me add that I continue to prefer a straight key.

John,

The object isn't to listen to the phone. You put a 200 Hz filter in there (or tighter) and you won't even hear the phone (am, ssb, whatever). You can chat right along with no interference from them whilst they get their panties in a knot. W2OY sure had his panties in a knot when my poor 75 watts of CW kept right on chatting with an Ohio station, despite Mike (W2OY) having a *lot* more power. I never heard Mike, except once in a while when I opened the receiver bandwidth up just to hear him screaming to "take those toys down into the cw band where they belong". If they can continue, so be it. They won't, however, likey interrupt the cw chat.

The other station and I chatted for a good half hour on cw. At 40 words per minute, one can pass a lot of information besides rst, qth, rig, etc. We actually had a nice chat. That's about as fast as most folks go using the keyboard in a chat. Quite sufficient. I could have done more and he probably could too, but 50 would have been pushing me pretty hard; 40 was comfortable.

Making fun of the dyslexic?

> There's also the perception some have that the whole thing may be a
> done deal already.

It was a done deal in the 70's. The gov't just works vewwy, vewwy
swoly.

> Suppose the majority of commenters want code testing to stay,

Huh??? Where did you get that hair-brained idea? Who redefined
"majority???"

either as
> it is now or maybe just for Extra.

Or maybe just for wishful thinking...

Will that make any difference at all
> to what FCC does? Back in 1999, a member of NCI read and tallied up the
> comments and found that the *majority*
> wanted either two or three code test speeds. Yet FCC went to 5 wpm
> only.

Hi!!!

Now you think the FCC will reverse itself after releasing this NPRM?

Hi, hi, hi!!!

> > On another note, I notice both Maia and West haven't said a

Dave:

Yeah, I am always so hung up on spelling and grammer I can't focus unless it is perfect... there are both meds and psyche help for it, I hope those who can't cope with this severe disability on their own avail themselves of what is available...

What is the disgust or revulsion of a certain wanting to be a world
renowned DXer working out of band French Hams on 6M called?
```

awfully confusing here you agreeing with what I am saying presenting
the rest or what

<cut> The fact would
> be that homosexuals often accuse their opponents of being 1) homosexual
> or b) homophobes <cut>

true enough, but esp the later tneds to be most common

<cut>(a vey inaccurate term sine it implies fear, rather
> than disgust or revulsion).

three comments here

one you get your own linguistic house in order before casting stones at
others

two, you (and Steve) object if I don't use use terms as they are
generaly used so get over it I am following convention

three the terms is pretty good good since fear disugst and revulsion
are pretty much the same thing, provoking the same reaction

>
> > and of course I know more than you in this matter by your words

don't know your sourcing for this but if true then Kinsey would
certainly know his stuff on the subject

everything I have read though suggests that Kinsey was simply bisexaul

Still? No, just this time. Who is this DeShawn speaking as if he were
you?

> Hitting the Geritol before you gt on to RRAP, Brain?

You sound a might touchy about this DeShawn feller. Does he wear a
dress, too?

> > Who is dis DeShawn?
>

Gibberish is gibberish, no matter the context.

> cuting junk

I have some junk lying around. How do you make yours cute?

> guess he is offended at not being called a bully

Why no, Mark, I'm simply amazed that someone who accuses another of
stalking and harassing seems to have reappeared here for just that
purpose. I couldn't care less if you'd call me a jerk, bigot, bully,
homophobe or any of your other pet names. I think most readers can
guess that you have some issues of your own to work out.

> Steve, K4YZ
---
OK, here's what I (K2UNK) just sent in:
1. I have been an amateur for over 45 years

and hold an Extra class license. I fully

endorse the proposed rules changes by

the FCC in NPRM 05-235 which, if

so adopted will end all code testing.

2. The discussion and debate on the need

for any code testing was fully covered some

5 years ago by the FCC with not one

compelling reason identified that could justify

continued code testing except for the

international treaty to which the USA was

a party to.

3. As the FCC clearly notes, that treaty has now

eliminated (via WRC-2003) any required code

testing and now clears the path for full deletion

of code testing for USA amateurs.

4. Accordingly, and in the absence of any new

compelling rational to retain a code test, the

FCC has only one logical choice.end all code

Testing.

Respectfully,

Bill Sohl, K2UNK

ANYONE who disagrees with stebie WILL get libeled...that's a given.

Poor stebie doesn't understand that reality isn't black-and-

Stebie thinks anything written against HIS viewpoint is "libel."

Tsk, tsk, tsk.

tsk tsk

NOW, NOW, NOW!!! :-)

>> Look at the responses - most of them are "Brief Comments", meaning a
>> short yea or nay. Many are embarrassing in their
>> poor spelling, grammar, capitalization and punctuation. Better
>> to spend some time proofreading and polishing.
>
>Making fun of the dyslexic?

PCTA extras LOVE to humiliate anyone with anything different
from their viewpoints.

There's almost 600 Comments in the ECFS now and the daily number
is increasing. The "brief comments" exist on BOTH sides of the
code test issue.

>> There's also the perception some have that the whole thing may be a
>> done deal already.
>
>It was a done deal in the 70's. The gov't just works vewwy, vewwy
>swoly.

Actually, the official word from the gubmint came in 1990 on the
worth of the code test to the FCC for amateur radio licenses.
See FCC 90-53 on the creation of the no-code-test Technician
class.

But...with no less than EIGHTEEN petitions to change U.S. ham
radio AND about six thousand Comments on same, the petitions'
main themes showing LITTLE of the "consensus" that the FCC
mentioned, it's a wonder that an NPRM appeared this soon (in
my opinion).

>> Suppose the majority of commenters want code testing to stay,
>
>Huh??? Where did you get that hair-brained idea? Who redefined
>"majority???"

Jimmie doesn't get out much, doesn't understand the rest of the
"amateur community" other than his immediate Code Club.

With 3 August almost over, the FOR:AGAINST ratio is 392:129 or
3.1:1 on WT Docket 05-235. [575 total Comments to date, with
54 of those "in-betweeners" or duplicate Comments]

>>either as
>> it is now or maybe just for Extra.
>
>Or maybe just for wishful thinking...

Only about 9.4% of Comments to date are "in-betweeners"
or duplicates. Most of those in-betweeners wish to have
code testing MOSTLY for extras...but a tiny few want FAST
code for ALL...:-)

>>Will that make any difference at all
>> to what FCC does? Back in 1999, a member of NCI read and tallied up the
>> comments and found that the *majority*
>> wanted either two or three code test speeds. Yet FCC went to 5 wpm
>> only.
>
>Hi!!!
>
>Now you think the FCC will reverse itself after releasing this NPRM?
>
>Hi, hi, hi!!!

Tsk, tsk, tsk...Jimmie is a SORE loser...no, he's a BITTER
SORE LOSER, wanting to re-fight and re-fight all the OLD
issues in order to "win" something.

>> > On another note, I notice both Maia and West haven't said a
>> > word
>> > either...guess they figure they'll sell books one way or the
>> > other...
>> >
>> Almost everything NCVEC wanted in their second petition was denied.
>
>Ditto N2EY requests...

Tsk, tsk. EIGHT Petitions (mostly pro-coders) were DENIED
while TEN Pentitons were "GRANTED in part."

Jimmie's "Blackguard" and "Quitefine" personalities are
beginning to emerge, wanting to FIGHT! :-)

Old battles, old fighting, done again hoping to "win" for
once. He ought to realize it won't work...be he no do.

>> btw, you missed the biggest hoot in Len's comments - the part where he
>> says he offers an "objective" view...AS IF!
>
>Looks objective to me. No toob equipment.

Give Jimmie SOME credit...he may have learned how to design solid-
state circuitry by now...but so far, all he's built of that are
KITS designed by others.

As far as the vast majority of commenters, I would be OBJECTIVE
on this issue since I have NO vested interest in preserving a
license title/rank/status/privilege of any kind. Last I heard,
the FCC was accepting Comments from ALL CITIZENS, not just the
minority in the "clubhouse" looking out at the rest of the world
(and wondering why no one respects them for their "radio

pioneer" work). :-)

John, what the PCTAs FEAR is losing their precious prestige
and sense of self-worth from their Nobel-quality achievement
of federally-tested morsemanship. When that is gone, they
don't have much of anything else.

Remember what Stebie Rosebud said out loud in here..."it's
all about the LICENSE." That's all it is to him, apparently.

John, that discussion took place in here a few years ago, my
remarking on what I'd seen, lent my Icom HF receiver for an
air test, on an ADAPTIVE decoder for morse. It was written
by a professional programmer as an intellectual exercise for
his own benefit, just wondering if it could be done. The
ADAPTIVE part was in automatically adjusting to the differences
in weighting of dits and dahs, their combination resulting in
a word rate equivalent. The ADAPTIVE part took most of the
source code...the translation of morse characters to ASCII for
immediate display was a small, small part of the source, just
a small look-up table in effect. It was done on a medium-old
clock rate PC but would be a snap to work at a 2 GHz clock.

To reverse the process, to add weighting to dits and dahs, even
to having different weighting for different characters, is a
snap with a random number routine. That wasn't done, but is
viable without much alteration of the source.

The PCTA extras in here will have NONE of such things! They
will attempt to THRASH anyone in a monumental display of deus
ex machina worthy of the most devout Luddite. <shrug>

Len:

Yep, that is one way alright, and produces good results, there are others, some better.

Adaptive learning by the program is the key, and the program must learn what the senders' length of a di to a dah is, and the breath of the width he is spanning of each the di and the dah.

The amateur abbreviations are in a table, and the dictionary from a spell checker can be borrowed to check decoded morse words against which are not abbreviations.

You are right, a high speed machine affords you time to do abundant error checking--and here is where you gain close to 100% accuracy from, final fall back is the ear and the mind, to correct any mistakes the program cannot, yet, handle...

All words which do not match the table of abbreviations or the dictionary have a copy of that word thrown into an error file, along with di's represented by periods and dah's represented by underscores or hyphens, of the word thought to be an error. This error file can be studied later and the program "tweaked" to handle such errors in the future.

However, what interests me most is your knowledge on the subject, you most certainly have a good grasp of the logic necessary to begin to put one together.

Perhaps you have programmed and played with such yourself? Perhaps you have a relative or friend in the field?

Where's the libel, Brain?

I said Lennie couldn't get past the first page without mentioning
ADA and lying.

He did both on the very first page of his comments to the FCC.

It's not libel if it's true.

I have absolutely no doubt, whatsoever, that it is absolutely
impossible for you to do that.

First of all, you don't know Morse Code...You'd have to have a
"cheat sheet" and do each letter one-at-a-time. You're too impatient
to spam us with your ill-conceived dreck as it is, and even then all
you have to do is push ONE button to make a letter apperear..I can
imagine you trying to take the time just to spell "an_old_friend" in
Code!

Then you can't spell correctly in the second place. So there we'd
have your incomprehensible typed code trying to encode even more
incomprehensible "words"...

We'd have better luck reading the United States Tax Code after
feeding it to a shredder than reading your "Morse Code", typed, sent,
telepathied, or otherwise.

>
> why would bother
>
> I quote you often and you simply deny it

No you don't "quote me"...You say you do, but you don't.

A "quote" is verbatim...word-for-word.

Saying "you said it" is not quoting.

You've "quoted" nothing. By the way, I am using the Webster's
definition of "quoting", not some made-up "maybe it means this today"
stuff like you do.

> > You haven't. Neither has Lennie or Brain.
> >
> > Because it didn't happen.
>

> we all believe you...not

Prove it.

Cite a post. A "real" quote.

> > > > Provide a cite, Markie.
> > >
> > > shove it
> >
> more stevie making up stuff

Nope.

You said "shove it".

Anyone can back up two posts and see it.

> > > > (Hint: This will keep you busy for a while since it never
> > > > happened...)
> > >
> > > nope it will not since I have no intention of doing as you demand

"Shove it" is a "demand".

> > It's an opportunity for you to prove your point and try and
> > humiliate me.
>
> it is more humilating for you to watch you twist in the wind

What twisting?

So far, all I've done is take YOUR words and show them to be
false.

> > But what it REALLY is is me proving that you haven't got a leg to
> > stand on with this assinine allegation of yours.
>
> is is me means nothing

I am sure it does...to you...

And please note in a post to Dave Heil you accuse him of citing
those words ('..is is me means nothing...") out of context.

Well, LiarBoy...there they are...Quoted verbatim.

What YOU did was "ctuuing" out the sentence that I had them in.

"is is me" IN THE CONTEXT of my sentence is proper colloquial
English.

You are not even competent in conversationalist English to know
better.

> > > another stevie lie

It's not suggestive of a single thing other than you are
desperately trying to find a way out of the dead end you've gotten
yourself into, and doing poorly at it.

> > > > But in either case, I bet I know more about both than you do.

>
> your false supperioty of is fun to wacth

There's nothing false about it.

I absolutely, without a shadow of a doubt, know more than you'll
EVER know about patient care...In this or any other life, Markie.

I am absolutely competent in all those disciplines I cited.

That's not "false supperioty", that's a fact.

> > > > > that you deny it so loudly is another

For the billionth time, Markie, I don't tolerate liars.

You're a liar.

> thou doth protest too much

Still not getting it right, Markie. Try again.

> stevie I told i would all of you sexual references

You would what?

Sorry, Markie...I can't find my Dreck-to-English manual this
morning.

> > > > But that you are lying about it and commiting the very "libel" you

Which I never did.

> 2 that if you are not lying then then I belive you doing something
> improper, possibly ilegal

Uh huh...riiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiight.

> 3 that isn't clear exactly how you are doing it

What's not clear to you is that you're getting your self in trouble
making such accusastions.

> you keep making stuff up or over simplifing statements

Nope. You said I was on the dole.

Now you're even lying about that.

> > It's not true...Not in fact, not in fantasy. Not under my "real"
> > name nor any fictional name.
>
> BUZZZZ
>

>
> nope you can't get it right even now

Sure I can.

> I have had dealing with mental health

Not enough. You're out of lock-up.

> but currently I don't need their help

Oh yes you do!

> nor am I getting it

THAT is OBVIOUS!

> more stevies lies
>
> cuting more stevie ####

No lies.

No ####.

I said you're a mental health case, and now it's proven by your
own words.

> > > OTOH I have no intention of discusing my medical records with you,

You have more than "anger issues", Markie.

> > Anyone who brags about being a chronic liar has deeper problems
> > than "anger issues".
>
> don't brag about about it, simply adknowledge the truth since

Oh..you acknowledge the truth that you're a liar, yet you don't see
the probelm with lying...?!?!

> > > Indeed it is one the reasons I show up here dealing with such a
> > > provoking bigoted fool as yourself, without losing my top is most
> > > benificail
> >
> > But you ARE angry. <cut>
>
> I am not angry. I get angry at times with your lies and bigotry but it
> passes you mostly make me laugh with your abusrdites

There's no lies of my utterance, Markie.

There's no bigotry of my utterance.

And if expecting adults to speak like adults and act like adults
is "absurd", then you do have a lot to laugh at.

The problem here is that you don't even realize who's laughing at
you and why.

> <cut> You're ate up with not being able to get ahead
>
> get ahead at what? Life? I have my own home 2 vechiles, no debts, a

> all with resources that means I don't don't need to work more 5 hours a
> week roughly, and that "work" is almost play as well. I call that
> being ahead

I don't believe a bit of it.

You whine about the cost of an ISP...You whine about "hiding" from
former spouses to avoid child support (yeah...like any woman would
procreate with YOU...)

You have recent;y stated you're caring for a disabled person
(yourself, no doubt), but then liken it to play. One wonders what
you're playing WITH with this disabled person.

(60's flashback to "The Who: Rock Opera Tommy", specifically
"Uncle Ernie")

> > and with people being able to see right through you, even when they
> > can't see you in person. This includes your "I am a victim" routine
> > which you use as a crutch.
>
> you know very little about me, indeed and what you should know by now
> you can't accept becuase it unsetlles your way of "thinking"

I know far more about you than YOU know, and that's from reading
here.

You've outted yourself, proven then admitted yourself a lair, and
then found out to be fugitive from the mental health system.

> > People try to give you direction, both overtly and covertly, but
> > you're bound-and-determined to beleive that "how" you are is normal.
> > It's not. It's an unrealistic assessment of your problems.
>
> Stevie you are nuts

Nope.

> of course how I am is normal for me part of the meaning of the word
> normal

What you ARE is NOT normal.

> I have a problem of two being that I, without huge effort express
> myself poorly in written form. That is unfortunate.

It's extremely unfortuntate since there's very cheap technology
that would allow you to avoid it. In the above paragraphs you claim to

be so well-off, yet can't splurge for some software that would shut up
all the naysayers.

But you don't.

> It is not as you
> insist a mental defect esp not a simply correctable one, years in my
> youth dealing the mental health system taught me that

Sure it is.

You know there's a problem. You know there's both therapy and
tehcnology to help you overcome it. But you refuse to use eitehr to
help you.

> > As for "provoking" and "bigoted", those are issues of YOUR own to
> > deal with. Again, they fall squarely into your "I am a victim"
> > routine.
>
> nope they are you being a Bully indeed I have no realy with Jim he

> jerk not a bully.

Dave's not a jerk...Not by ANY definition.

Nor is Jim.

> I know you are a bully because I watch you bully everyone you disagree
> with, not just me. that tells who is seeing thing straight

The you've just proven that you need glasses, Markie, because
there are more folks here than you, Brain and Lennie that I've had
disagreements with, and manage to move on.

Too bad for you.

Uh huh.

About what I expected and whom I expected it from. Pretty much
substantiates my claims about who pulls threads into rants, etc etc
etc.

> > Ladies and Gentlemen of the Commission, Greetings,
>
> Try treating your fellow hams like ladies and gentlemen, Steve.

OK...From now on I will treat you like a lady, Brain, but only
since you asked me to do it.

> Your 1,000+ comments each month treat people like dirt.

Nope...Just the liars, deceivers and cheats.

Which pretty much narrows it down to you, Lennie, Mark Morgan and
Toaddie.

Pretty small field when you consider the overall size of the race.

No "73" for you...You very aptly proved who's what here, Brain.

Re. NPRM WT 05-235

To Whom It May Concern:

Undoubtedly, there will be many comments filed re. This NPRM. Therefore, I will be brief and to the point. Although I am not new to radio and earned my GROL long before my amateur radio license, I am a relative newcomer to the Amateur Radio Service. As such, I feel that I can offer an alternative view to many of the "old timers."

I believe that there is still a very important place for minimal Morse code proficiency testing in U.S. amateur radio licensing. I've been told that "proficiency" is the technically correct term, however, I do not feel 5-wpm represents Morse code proficiency. I feel that the current 5-wpm Element 1 test is sufficient to require an individual to learn the Morse characters so that s/he may then make an educated decision as to whether or not s/he wishes to pursue CW further.

I would also like to dispel two myths that I have repeatedly heard/read in the argument for dropping Element 1.

· The current Element 1 test acts as a filter to keep out CBers and other "insufficiently-dedicated" individuals.
· The current Element 1 test acts as a deterrent to newcomers to the hobby/service.

Along with being an amateur radio "newcomer," I am also a CBer and Element 1 did not deter me in any way, shape, or form from upgrading my license class and earning HF privileges. If during the course of reviewing the comments filed re. NPRM WT 05-235, this demographic is referred to while supporting the removal of Element 1, please do not include me. This "newcomer" wholeheartedly supports the retention of Element 1 testing for the General and Extra class licenses.

In closing, I would also like to remind those who believe that Morse code testing serves no "regulatory purpose" in amateur radio that there is an intrinsic quality at stake here too. It is part of our culture and tradition and therefore should not be removed entirely from the curriculum.

Thank you for your time and attention.

Sincerely,

Egbert C. Craig, Jr., WA2SI

> Remember what Stebie Rosebud said out loud in here..."it's
> all about the LICENSE." That's all it is to him, apparently.

Whellllp....You'll lie on documents that you send to the federal
government. I guess it's just as easy for you to lie here.

Steve Robeson did NOT say "...it's all about the license..."

Steve Robeson DID say that Amateur Radio is about OPERATING the
radio...Something that Lennie Anderson cannot do without the license.
His frequently mentioned GROL is useless for Part 97 operations.

Leonard Anderson lied on federally submitted documents. Right
there on page one.

Putz.

You already know...I am your worst nightmare. I'm your guilty conscience mixed with equal parts of intolerance for liars and willingness to rub your nose in both.

Have a nice day, Peas. (Yes..."Peas"...you figger it out...)

Steve, K4YZ

"LIARr"...?!?!

That having been pointed out, sorry to disappoint your otherwise.

Also sorry to leave you with your butt hanging out on yet another
of your failed attempts to TRY and show me a liar.

Putz.

First off stebie, he isn't on death row, and I not for nor against the renewal of his license. However, there is a lot questions that need to be answered as stated in my orginal post. If the FCC doesn't answer them I sure the US Court of Appeal will inform the FCC to do so.

not at all, noting desperate, why would I BE desperate, nothing you can
do will make me think less of you, and nothing I do will change for the
better what you think of me

all that is going on is simple I'd rather attack than contiue to be
butt of your attacks

you brought this on yourself, whn you denied i droped the matter since
it was bit less clear but your brought it and demanded I apolgize and
made an issue of again so fine I do think it is true and it beats other
topics you want to deal with
>

becuase as John has pointed for me it isn't just a matter of "some
cheap tech"

and it would nothing to shut you up

>
> But you don't.
>
> > It is not as you
> > insist a mental defect esp not a simply correctable one, years in my

not according to the pros and the folks that do the tests

>
> You know there's a problem. You know there's both therapy and
> tehcnology to help you overcome it. But you refuse to use eitehr to
> help you.

another lie stevie the lie of course the notion everything can be
"fixed" most stuff can be mitagated to some extent but little can raly
be "fixed"

indeed if you got help for your problems i doubt they can fixed either,
they could be mitagated but you refuse to do so

>
> > > As for "provoking" and "bigoted", those are issues of YOUR own to

realy name one? cloest one would bil sohl but he rarely posts

no regular that you respond to do you seriously disgree with

but in any case you think that you might not bully everyone it becomes
valid to say you bully no one

realy sick stevie

>

What you folks are describing is just a form of RTTY using Morse Code as the
encoding method, rather than ASCII or Baudot or some other scheme.

Of course it can be done, and has been done. Why it would be done is another
issue. It is certainly not a "better way".

Consider a bicycle. If another wheel is added, the rider doesn't need
to worry about falling over, so the skill required to ride it is
greatly reduced.
Add a small gasoline engine and a suitable transmission, and
pedaling becomes much easier. A simple cover will protect the rider
from rain
and other inclement weather.

Eventually you wind up with a small, three-wheeled automobile that
could win
the Tour de France. Except it's not a bicycle anymore, and its rider
isn't
a cyclist by any stretch of the imagination.

Or consider the piano. Pianos and similar keyboard instruments have
been around
for hundreds of years. It takes considerable skill and practice to play
them, and
reading sheet music is a skill of its own.

With modern computers and software, however, one can simply have a
machine that
scans in the sheet music and turns it into a "performance" - without
all those
lessons, practice, etc.

There are many such analogies. But they are lost on some people - those
who
Shaw described as "knowing the price of everything and the value of
nothing."

## 400. Re: Docket 05-235 Scorecard

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-04 16:32:27 UTC
From: LenAnderson@ieee.org
Message-ID: <1123173147.254705.81800@o13g2000cwo.googlegroups.com>
Source record: 114752

Today's Scorecard in the NCTA v. PCTA Amateur Championships!

As of the of the day in DC on 3 Aug 05, WT Docket 05-235
Comments are:

Total 575
In-Between/Dupes 54*
Against Elimination 129
For Elimination 392

* In-betweeners are those "following" the ARRL plan to scrap code testing for all but Extras, therefore with feetses in both camps. In that group also are duplicate Comments and a few who wish a higher morse rate for all below 30 MHz! Excluded are the "joke" comments with names and given mailing addresses which are obviously phony.

Note: The DATE RECEIVED block on the ECFS Search Listings is running on Eastern time zone and the calendar date for all Comments is set accordingly.

To date, the NCTA:PCTA ratio is 392:129 or 3.1:1 ratio. The number of "in-betweener" Comments has increased markedly over the second week of Comments. To double-check that, I went through the entire "Against" Comments collection prior to 3 August and adjusted them and the "In-betweeners" accordingly.

Stay tuned. This was only Day 11 of Comments; there are 64 more days before the official end of shouting and hollering.

that does depend on the goal, and the operator. Personaly I find the idea of the manual morse and compter morse interacting the only redeeming virtue of the mode (please I know you disagree but go along for a minute) That someone could use the simple assembly of the QRP rig to reach out to a station like mine reading fby machine and sending it back the same way. It is one the few occasion I can realy see much use in the mode during an emergency gives the user the low signal abilities of RTTY or PSK 31 but allowing the station in the affected area to despense with a PC

Thus it is 'better" in some ways, indeed I am a much better operator of computer morse than manual and it would make my staion a bteer station by your standards (more modes more abilities)

so where your beef?

it is not your cup of tea sure fine

>abbreviations.

There's no need to use a table of abbreviation...those can vary
from time to time and operator to operator. The MAJOR problem
is determining the "dit rate"...once that is done, the "dah" can
be separated, also the inter-character spacing.

>You are right, a high speed machine affords you time to do
>abundant error checking--and here is where you gain close to 100% accuracy
>from, final fall back is the ear and the mind, to correct any mistakes the
>program cannot, yet, handle...

Those who've never gotten far INTO computer programming will NOT
fully understand how blazing fast a 2 GHz clock PC really is!
My platform isn't top-of-the-line at 2 GHz clock and 100 MHz
RAM access...but it can almost blow the mind on how fast it can
handle anything in the Win32 family...I am getting slowly into
that through PowerBasic Compiler, calling the canned Win32
routines directly.

Back in '92 I shifted over to a moderate PC with a 20 MHz clock
and 1 MHz RAM access rate...and was checking various forms of
complex number calculation combinations to handle LARGE two-
dimensional arrays. Had those runing at tens of thousands of
random-quantity repetitions in order to get the fastest. That was
for a ported-over circuit analysis program from RCA in the 70s
(which I had helped improve - along with others in Central
Engineering - then). In the 1970s, any mainframe with a 10 MHz
clock and 1 MHz RAM access was considered "top of the line." :-)
I dug out the same PC time test routines and ran them on THIS
platform and the runs were just an eyeblink long. :-) In order
to actually time them, I had to increase the number of iterations

a hundred times (from about 10K) in order to see some semblance
of actually working hard!

>All words which do not match the table of abbreviations or the dictionary
>have a copy of that word thrown into an error file, along with di's
>represented by periods and dah's represented by underscores or hyphens, of
>the word thought to be an error. This error file can be studied later and
>the program "tweaked" to handle such errors in the future.

I disagree. The first task is to ADAPT to the going rate. That
requires only a temporary memory (but a large one at that since
one dimension MUST be time) to set the approximate received rate.
When rate is approximated, there can be a built-in weighting on
time duration to determine dit from dah. Simple conditional yes-
no on duration but the trick seems to be arriving at a good
decision point in time.

"Abbreviations" tables aren't needed. In fact, from seeing such
a program working (and being able to look at the flow diagrams
of the routines...source was in C++ but flow diagrams were in
standard box-diamond form...the common abbreviations and Q codes
could be left as they were in ASCII on the screen. Since morse
operators tended to have a great variation in inter-character and
inter-word spacing, those spaces were just left in the screen
display and the human reader could do the final "adaptation" on
what the spaces meant (or didn't mean).

>However, what interests me most is your knowledge on the subject, you most
>certainly have a good grasp of the logic necessary to begin to put one
>together.

In 1970 (at an RCA division in Van Nuys, CA) I got a chance to
do programmed calculations on an HP 9100 desk calculator...did
some statistics runs on aircraft collision avoidance estimates,
part of a long-range R&D project at RCA devised by the late
Jack Breckman (a genius type who could extemporaneously speak
in ordered paragraphs). Found that programming and I got along
very well and a "romance" of sorts happened, went full-flower
with successful negotiations with bean counters to get corporate
computer time (then horribly expensive). Got Dan McCracken's
softcover on FORTRAN IV Programming to explain the program
ordering (damn good book, Dan became President of the ACM for
a time later), won a steak dinner bet with another on being able
to make a running program and off it went to bigger, better
things. The epiphany happened due to a supplier delay on some
small inductors for a vital hardware delay line...could I use
a "close, but not quite right" inductor which was plentiful?
Did a simulation run for pulse shape on the corporate computer
using the possible replacement, decided it was okay. When the
replacement parts arrived, I quickly tack-soldered the delay
line together, viewed the pulse shape though it and found the
computer simulation waveform matched the real waveform EXACTLY!

I was sold and a definite believer in accurate simulation ever since.

>Perhaps you have programmed and played with such yourself? Perhaps you >have a relative or friend in the field?

I never bothered with a "morse code reader" program. Wayyyyy TOO MANY OTHER kinds of calculations that would be of immense value. When my group at the RCA division was disbanded in '75, I had six programs in the Central Engineering software library and have had four other programs as Shareware back in times before the Internet went public. Those are all Freeware now, not that it matters much with Windows and other GUI-ey graphic screens being "what all want." :-)

As a former voting member of the ACM, courtesy of cross-membership privilege of the IEEE, I've worked with/known a bunch of computer programmers. The kind that can DO THE WORK and DEMONSTRATE it without pointing to a bunch of framed/plaqued certificates on the wall. One of those was the guy I described...one who had the HOBBY of programming as well as doing it every day for a living. We were friends enough for him to let me look at all pages of his project notebook...and myself letting him use my Icom receiver as a morse signal source. He thought it was a fun program to do, while I thought morsemanship wasn't worth bothering about...but, it was a fascinating challenge to mechanize and to make work. His development platform was rather faster than my 20 MHz clock thing and - as it was written then without final optimization - wouldn't work with high rates of the speed-freak hams (I knew of two, one in Frisco, the other near San Diego, both retired and busy beeping each other most every day then). Right now I can order a Microchip PIC from DigiKey running at a 50 MHz clock, get a couple large EPROMs to hold the source code (if ported) and it would work fine, I'm sure. PIC's RISC instruction set is NOT compatible with 80x86 instruction set and takes a lot of translation. Thank you, I'll take canned PIC programs, use those and be done with it.

I do NOT have ANY sort of decoder for morse, TTY, commercial SSB TTY tones, any of the TORs in-house. Not my cuppa either. The 'TOR peripheral boxes are cheap enough that I could buy one and use it if the interest struck. No problem. Someone else did the design, debug, engineering and I respect that; no sense in re-inventing wheels unless it's to make them more rounded, smoother, etc. :-)

Note: Watch for Jimmie Noserve, the Nun of the Above, to pick up on that last sentence and use it later in chiding postings agin' me...it might be weeks before he do dat, but he gots a memory like an effluent and will issue it later. Predictable.

>if by that you mean that some folks like myself will not allow you to
>control the newsgroup then of course you are right

Stebie has a terrible NEED to control others and acts like all
his diagreers are the Antichrist, spawn of satan, or evil
incarnate come to bedevil HIM, the DILL Instructor of this
murine corpse. :-)

I love Stebie's opening "salutation" to the FCC on WT Docket
05-235:

>> > > Ladies and Gentlemen of the Commission, Greetings,

Geez, Stebie is giving a SPEECH for an assembled group! :-)

He steps up to the podium, adjusts the microphone, takes a
sip of water, opens his speech text copy notebook and beings
to SPEAK! [poor guy didn't get any thunderous applause when
he was finished...snif, snif...]

At 445 12th St. S.W. in DC is someone at a desk, using a
workstation, pulling down incoming Comments on WT Docket
05-235 at an average rate of about 52 a day...and Stebie
thinks he is making a SPEECH! Gotta love the immense EGO
on the DILL Instructor with the askew campaign hat. Like
the FCC folks love "getting SPOKEN to?" :-)

If Bill Cross had the FCC making a decision contrary to what Stebie wants, Stebie would probably yell "Get down and gimme ten!" at him. :-)

Ve are all Putzes in da ghetto while Stebie is up on the roof vid his fiddle, playing while his mind burns. Shalom!

Not really. He's just nutso, Mark. He's frustrated and Angry
As Hell And Can't Take It Anymore! as of several years ago.

>> Steve Robeson did NOT say "...it's all about the license..."
>
>you have said words to that effect, a valid response even under oath

I can pull out a recent archive quote from Google to prove
what Stebie said...but Stebie would DENY it (under oath or
mumbling several oaths), try to rationalize it, all to avoid
EVER saying any of us are correct. In his disordered mind,
all negative sayings against Stebie are LIES!!! :-)

>> Steve Robeson DID say that Amateur Radio is about OPERATING the
>> radio...Something that Lennie Anderson cannot do without the license.
>> His frequently mentioned GROL is useless for Part 97 operations.
>
>another Stevie lie
>
>Len or anyone else without a license can indeed operate on ARS
>frequecies

In a REAL emergency...FCC regulations say so. :-)

However, I can and have operated MANY RADIOS quite well and
all legally...just not IN the amateur frequency allocations
legally. OPERATION no problem.

>> Leonard Anderson lied on federally submitted documents. Right
>> there on page one.
>
>anything Stevie doesn't like is a lie

The current President of the United States LIED when he said, before the nation, that there were Weapons of Mass Destruction in Iraq, thus justifying invasion and the killing of thousands of Iraqis and 1800 U.S. military personnel. So far, shrub hasn't been recalled and still occupies the White House. :-)

Tsk. Stebie EXAGGERATES something fierce! :-)

"LIED ON FEDERALLY SUBMITTED DOCUMENTS!!!!"

Sound the Hue and Cry!!! Form the posse! Hang 'em high!

Stebie needs to wash his KKK "white dress uniform," especially around the mouth. It's gone on seven years now and hasn't been cleaned...must be itching something fierce after seven years.

No problem. We'll see Stebie IN COURT. Oyez, oyez! :-)

>> Putz.
>
>more obsession with genitals

Maybe Stebie isn't "getting any?" He wants to Convert?

Oy gevalt!

Len:

It is not even close...

The end of all that design in computer hardware and software, when
efficient and up-to-date, would be impossible for a human operator to send
let alone receive without hardware and software... RTTY is as dead as CW...

Len:

Right now I am running a 3.8Ghz processor clock with a 466Mhz memory clock
on a bus capable of 266Mhz.

The fastest keyer would leave the
hardware/software killing time to await his next di or dah...

The purpose of the "error file" is to catch new abreviations so they can
be added to the table, let them come up with as many variations as they
possibly can, in the end the reader is only made stronger...

nope stevie lack the guts and likely the funds to take us there, and
seem to lack the funds to worth us taking him there

id rather see him up before a comitement broad but likely he is not
screwed up enough to commit given the way they let folks out now

Perhaps someone can clear up one issue for me.....why do we take a morse code test to gain access to phone portions of the bands? It has never made sense to me that you had to pass a code test to operate HF phone.....

For the same reasons that you take tests which include questions on homebrewing to use manufactured radio sets.

For the same reasons that you take tests which include questions on voice modes to use Morse Code and data modes.

For the same reasons that you take tests which include questions on the limits of VHF/UHF ham bands to operate on the HF/MF ham bands.

For the same reasons that you take tests which include questions on RF exposure and electrical safety to use low power battery-operated rigs.

For the same reasons that you take tests which include questions on transistors and ICs to use vacuum tube rigs.

Etc.

Suppose someone wanted to operate a low-power Morse Code amateur radio transceiver on 7020 kHz. Just a simple 50 watt transceiver and dipole antenna, with key and speaker.

To operate legally, such a person would need an Extra class license, which requires passing tests that include all sorts of stuff that is unnecessary for the legal and correct operation of the above station.

Steve,

The comment period isn't OPEN yet (the release of the NPRM by the FCC doesn't "start the clock," it's the publication in the Federal Register, which has not yet happened.

Thus, technically speaking, while the docket is open in the ECFS, comments filed now are "premature," so I would suggest you consider refraining from "dis-ing" people over something where they are behaving in a completely appropriate manner.

I fully intend to file my comments on the NPRM within the appropriate, prescribed time window. I expect others who understand the comment/reply comment process, as prescribed by the Administrative Procedures Act will likewise file their comments in the appropriate, prescribed time window.

No, you're not.

The systems you're talking about consist of a keyboard and visual
readout,
same as RTTY and other "keyboard modes". The error-correction and other
features are simply enhancements - they do not change the basic method
of communication, nor the experience of the end users.
>
> Not even close... RTTY is dead... but some dead languages are still
> spoken, no surprise. Look at how long Latin was a dead language, but

Morse Code, OTOH, is alive and well on the amateur bands. You will find
many
more radio amateurs on the HF/MF amateur bands using Morse Code than
any
other mode except single sideband amplitude modulated voice.

Another analogy:

Inexpensive pocket calculators can do basic arithmetic far faster and
with more
accuracy than most humans, even with pencil and paper. Does that mean
there is
no reason to learn how to add, subtract, multiply and divide?

N2EY:

Yes, your list there shows how quite insane FCC licensing has been,
however, the arrl has to bear a lot of this blame also, they used
political pressures for their personal gains.

The longest journey begins but with the first step, there are many
necessary steps now to bring amateur radio back in line with sanity...

So what is your solution?

Would you eliminate the technical parts of the tests because hams
aren't required to build or fix their rigs?

Would you eliminate all mode-specific and band-specific questions
because hams aren't required to use any specific band or mode?

Would you eliminate all technology-specific questions
because hams aren't required to use any specific technology?

*Besides* eliminating the code test, what would *you* change about
the license tests?

Because it is one of the basics of amateur radio. There are a number of things that you have to learn as basics that you may never use. A fundamental introduction to these basics is valuable in allowing the operator to better judge whether the subject is interesting enough to pursue further.

> for a minute)

It's just *one* good thing about Morse Code (the ease and flexibility
of
human-machine interface. There are many more good things (redeeming
virtues?) of Morse Code.

> That someone could use the simple assembly of the QRP rig
> to reach out to a station like mine reading fby machine and sending it

If the operators know Morse Code, there's no reason for a PC at either
station.
>
> Thus it is 'better" in some ways, indeed I am a much better operator of
> computer morse than manual and it would make my staion a bteer station

In that regard, it is "better". But it is not universally "better",
just as an automobile is not universally "better" than a bicycle.
>

> so where your beef?

The idea that machine operation is somehow universally better.

BPL !! Even that expression has been usurped. BPL used to mean Brass
Pounders League. It was a CW honor to achieve BPL in handling traffic on
the CW nets.

Dee Flint wrote:
>
> I haven't decided whether to comment or not.
>
> Dee D. Flint, N8UZE

I'd strongly suggest that you comment, Dee, regardless of
what your comments are. And regardless of whether they
affect the outcome at all.

For one thing, although some folks claim to know what the majority
wants,
the fact of that won't be known until all the comments are in. Last
time,
the majority didn't get what they wanted, though....

Of course someone trustworthy will have to read and categorize all the
comments for us to know what the majority wants. That was done back in
1998.

If nothing else, all of us can at least say that we let FCC know where
we stood.

--

One thing that I found unsettling about 98-143 was how *few*
comments were filed. FCC was proposing the biggest shakeup of
the license and test structure in many years, and they got maybe
2200 comments - from an amateur population of almost 700,000 hams
(not counting expired-but-in-the-grace-period licenses, clubs, etc.)

Such a low turnout is troubling, particularly considering how easy
FCC has made it to file comments. There's ECFS, which can accept a
brief comment typed-in, or a lengthier one as a file attachment.
There's comments by mail, in paper or electronic format. 98-143
had a very long comment period, yet only about 1 in 300 US hams
commented at all.

Back in the 1960s, when FCC proposed the changes that came to be
known as "incentive licensing", they got over 6000 comments. There
were only about 250,000 US hams back then, with no internet, no
email, no word-processing, etc.

Last time I looked there were over 600 comments on file.

what I would do? gee id change the structure of the tests a pared down
basic test of rule regs, rf safety, bands stuff like, and several
(Passing only one of these) each test covering a type of operation in
detail, would even aloow a code test as an option for this second test,
so I kidnly like the Canda changes esp if theyd go a bit further down
that line

Not just my opinion. The good things about Morse Code are an
objective fact.

Of course that doesn't mean Morse Code *must* be tested, any
more than the good things about, say, a standard phonetic alphabet
means it must be tested.
>
> not in mine
>
> it is a fact manual morse is quite useless to me and others

If you have a mcahine that can interface with someone using manual
Morse Code, whom you otherwise could not contact at all, how can that
manula Morse Code be useless to you?
>

> > > That someone could use the simple assembly of the QRP rig

That's simply not true!

All anyone has to do to get the license is to pass the required tests.

VEs are empowered to use all sorts of accomodations in the
tests (both written and Morse Code) if needed. In fact, a Morse
Code *sending* test can be substituted.
>

The same things about all the other things hams are required to learn.

--

Suppose you were given the following test:

You're sitting at a table with pencil and paper, and your choice of
speaker or headphones.

Through the headphones you hear a series of words spoken slowly and clearly, spaced so there is one word every 2 seconds or so.

All you have to do is write down the first letter of each word.

The test always uses a standard phonetic alphabet, too.

So if you heard:

"Sierra....Tango.....Alpha.....Romeo.....Tango.....Whiskey.....India.....Tango.....Hotel"

you would write down

"START WITH..."

etc.

The test goes on for 5 minutes, but all you need is one minute correct to pass the test.

Could you pass such a test? Is there anyone who can converse in English, and who is literate in that language, who could not pass such a test?

All the Morse Code test does is to replace the words with specific sounds. Instead of "Sierra", for example, you would hear three short beeps.

What is so impossible about that?

I could see that if someone had an auditory or cognition problem, they might have trouble with both tests. But it seems incredible that people who would have no trouble with the first claim the second to be impossible, or even very difficult, for them.

Of course for some folks, "can't" actually means "won't" or "don't want to".

Not at all, Mike.

Of course some folks who poat to rrap tend to pose a
sort of Zen problem - they tell you what a thing is
not, or what it shouldn't be, but never say what it is,
or how it should be.

You watch. If Element 1 is dumped, as seems highly
likely, there will be a burst of license activity,
then same old same old as far as the numbers go.

Then watch as the written tests and other regs are
attacked as "barriers".

Heck, it's already started with the free upgrades
thing. FCC rejected that - this time.

No. But I would emphasize troubleshooting strategy, which would help
hams at all levels from the appliance operators to the
one-handed-behind-the-back surface-mount circuit homebrewers.

> Would you eliminate all mode-specific and band-specific questions
> because hams aren't required to use any specific band or mode?
>

Nope. But know the best operating procedures for each band and mode. And
why, from a basic radio science perpective.

> Would you eliminate all technology-specific questions
> because hams aren't required to use any specific technology?
>

No. Keep the introductory electronics, but strongly emphasize the
science behind the RADIO WAVES you're EMITTING and RECEIVING, and the
media in which they propagate. This means that even appliance operators,
so maligned on this group and elesewhere, will have as firm foundation
in the actual activity of communications as the electronics wizard.

> *Besides* eliminating the code test, what would *you* change about
> the license tests?

It's the Operator Techniques, stpuid. ($1) With fewer LIDS, people won't
care what electronics skill level you have when the mike is off. And ham
radio will be less of the circle jerk it has become.

And eliminate the swimsuit competition as stated in previous message. I
mean, the Huntsville Hamfest is coming up and man, I don't even want to
think about it.

>Perhaps someone can clear up one issue for me.....why do we take a
>morse code test to gain access to phone portions of the bands? It has
>never made sense to me that you had to pass a code test to operate HF
>phone.....

Heyo John T.,

Oh, my, that IS a long story, but it begins in 1896 and the
first demonstration of radio as a communications medium. Back
then, before transistors, even before vacuum tubes (!) this
"radio" thingy was VERY primitive. One could turn the Tx ON
and OFF, though, so all turned to the Morse-Vail telegraph
code which was now 52 years old and mature.

Okay, 18 more years to 1912, the appearance of the first U.S.
radio regulating agency and the sinking of the Titanic. This
fledgling radio regulating agency had no precedent, played it
by ear and eventually made radiotelegraphy a necessary test
for applicant radio operators. Almost ALL radio transmitters
used on-off keying. Damn simple technology, if you can call it
"technology" in radio. On-off keying is a no-brainer thing.

Two more years to 1914 and Saint Hiram of Maxim, the new
"leader" of hamdom who, with a couple buddies, establishes
the ARRL. [never mind that the Radio Club of America was
formed a lot earlier as well as some competitors] Things were
very competitive amongst the ham clubs then.

Cut to 1919 and Hiram Goes To Washington to lobby for the
restoration of the amateur bands...which had been shut down
for World War One. Big Publicity is later made of this
successful lobbying...even though Maxim wasn't the only one...
in the ARRL's telling of the tale Saint Hiram did everything
but walk on the reflecting pool of the Mall in DC.

ARRL has made it to the top of the club heap after WW1 with
a neat trick: Becoming a publisher...of books on ham radio,
of a periodical called QST. EXCELLENT base for spreading
the ARRL's word, it's "maxims" as it were. H.P.Maxim does
a regular column (he is now virtually President for Life)
under the pen name "T.O.M." ("the old man") and talks a lot
about sending good code, behavior, and all the other things.
Publishing MAKES MONEY and they can get away with it on taxes
because the League is ALSO a "membership organization." With

profit the League can afford a legal firm in DC to represent them before the various radio commissions.

New findings, new rulings. Hams are banished from the "BC" band and "vanquished" to "wavelengths shorter than 200 meters." I.e., frequencies above 1500 KC (as they usta call KHz), or MF and HF the "short waves." Oh, wow, lots to write about, lots of "technology" to publish about with this new "shortwave" stuff. Between the Wars the world's hams begin to converse, but in the newly-standardized (more or less) International Morse Code (standardized for international commercial telegraphy). Vacuum tubes begin to be available and the radio technology starts looking like technology. But...

The Great Depression hits with over a quarter of the workforce in the USA out of work (but almost three-quarters still work). Tough times, little income. Tube radio parts are expensive and radiotelegraphy is the cheapest mode in hardware...AM voice sounds too "commercial" like professional broadcasting. Very few hams know about "sideband" which the telephone long-lines folks started on land, then pioneered on HF with four voice channels per transmitter. T.O.M. hung in there into the thirties and kept on plugging morsemanship. Vive la beeping! "The Amateur's Code" came out in the 1920s, one item of which was a shameless plug for the League ("owe your allegiance to the ARRL" etc.).

Come WW2 and there's another blackout of ham radio. QST keeps being published, yielding free publicity for income-producing ham books. ARRL makes a big thing about hams being a "national resource of trained radio operators for the nation" and that notion will hang on for six decades plus. "CW" is King in the ham world. But...with the revolution in post-WW2 technology arrives the single-channel single sideband technology for voice at lower power, somewhat lower cost. The military starts the demand and Collins Radio leads the commercial pack in producing the bestest SSB rigs...which they also market to hams. Oboy, new technology in 1950 (although lagging the commercial radio field by at least two decades). QST and some olde-tyme hams bring back the hoary old saying "CW gets through when nothing else will" in defiance of this new voice mode and new technology (who the #$%^!!! ever heard of "sidebands" and what's all this "vector" crap?).

ARRL starts making good bucks in publishing after WW2 and several other publishers start up. Profits for all. Standard of living improves, money is spent. But, the leaders at the League are still of the "old school" where Code is King. Now back in that prehistory, few hams lived close to DC and the Internet wasn't even a pipe-dream. Communications with one's government had to be done by surface mail (slow) or telegram (fast but expensive).

Few could afford Telex things except maybe the attorneys who worked over the gubmint for their clients.

The League got terribly Conservative in the post-war time and that spread throughout the world. Political tensions were high all over and the "Reds" were waving sabers and tossing test nukes. Instability after a terrible Second World War. Conservatism and simplicity looked good, a comfort. Olde-tymers at the League pushed for "CW" to be at the top of the heap and there it stayed for decades. ARRL had the MAJOR publicity vehicle and monopolized the influence on ham hobbyists. Olde-tymer ham conservatives ruled the IARU and did their thing with the newly-formed ITU for ham radio standards.

Things didn't go as well for the olde-tymers as they thought. New blood was out there and flowing hotly. At the WARCs this progressive group were able to set the "code test mandatory" rule of the ITU to just below 30 MHz. The "T-hams" started up in various other nations before the USA made the no-code-test Tech in 1991. Domestically, the no-code-test movement was stirring and sounding off during the 1980s (they pushed the no-code-test Tech creation, NOT the League). But, comms on legal matters took TIME and effort for all but the attornies. Conservatives in the League were entrenched now and were determined not to give up at any cost!

Behold the Internet, finally public in 1991...then the push in the government to take advantage of that, to eventually integrate it into the DSN as a part. Pow! Suddenly the lowly citizen with a PC could now TALK DIRECT with their government! Wondrous! Something they never really had before...no need to "filter" things through some "membership organization." Internet exploded in many directions and the convservative olde-tymers groused and grumbled. Their INFLUENCE was waning and they could no longer "direct traffic" of members to THEIR way of thinking.

Cellular telephony, CDs, dial-direct-wired phones, DVDs and VHSs and a burgeoning fun-with-any-electronics in hobby things vied for attention among hobbyists. The WORLD was open to explore and didn't depend on the vagaries of the ionosphere or solar index. Olde-tyme conservatives were pissed and strutted around with hoary old phrases, cussing at evil CB types (now 47 years old), and making big big with morsemanship. The League managed to hang onto its core membership but the core was olde-tyme conservatives who prized morsemanship above everything else. The League fought tooth and nail for maintenance of the status quo since their black-ink ledger notations needed MORE $$$.

By 2005 there are MORE cell phone subscriptions than there are wired phone subscriptions, one in five families have some kind of Internet access, and the League membership has shrunk to less than a quarter of all licensed U.S. radio amateurs. ARRL

was seemingly unaware that the two Technician class license totals had reached 48% of all licensees in this year...they have never really reached out to them. Why, I don't know, but the League is hide-bound to their olde-tyme core conservative membership desires. The numbers of amateur licensees is NOT growing, actually slightly dropping (small but continuous). The newcomers are getting in via the NO-CODE-TEST class and most are staying there. They do NOT want, en masse or not, to be the greatest 1930s radiotelegrapher possible in 2005.

In 2000 the IARU defied the ARRL and pushed for no-code. By mid-2003 the ITU-T *finally* got S25 rewritten and the mandatory code test for a below-30-MHz license was removed, deleted, made defunct. Trouble is, all them olde-tyme conservative hams had been so thoroughly brainwashed by code testing that they opposed U.S. code test deletion like it was a battle for life itself. For some that may have been true...morsemanship was THE thing in their radio world and that world would END on code test elimination! Olde-tyme mentalities are VERY stubborn.

Trouble is, them morse lovers are outnumbered 3:1. They just don't realize it yet...

>attempting to break archaic methods to attempt to obfuscate anything you
>don't like and/or agree with?

John, he MUST. It's an obsessive compulsion. :-)

That's Jimmie for sure, the Nun of the Above. Predictable.

> Technology has passed you by man, the reins
>have passed, what you are holding in your hands are the ashes of
>yesteryear... don't embarrass yourself and others about you... speak on
>things you understand, or not at all...

Oh, oh, Jimmie will now remark on his TWO degrees in EE and his
years-as-a-ham (like he spent 8 hours a day, 7 days a week in
pounding his brass on the ham bands). :-)

The Order of Luddism is upon Jimmie and EVERYTHING must be done
manually in communications! Just like in the 20s and 30s during
the pioneering days of radio. Jimmie bravely carries his cross
for them (provided Kellie doesn't shoot the bear).

He segues to music (morse is "music" to his ears...and years).
He probably hasn't heard a good musician at work on a synthesizer
keyboard producing the enjoyable sound of an entire band...in any
style of music you like. Down here there's dozens and dozens of
them...busy working.

You say that RTTY is "dead" but it hasn't "died" yet since it
carries on with the TORs (Teleprinter Over Radio) such as AMTOR.
The FCC, nor any of its three predecessors, NEVER had a manual
teleprinter test for radio amateur license applicants. They've
"always" had one for manual telegraphy. That's the REAL
subject of WT Docket 05-235.

Just leave Jimmie alone with his abacus/soroban and he can do
all his Eigenvalues by hand plus a table of elliptic integrals.
Very basic calculator. However, beyond the four functions it
gets cranky...forget simple square-roots, for example. A Taylor
Series for a correct Sine or Cosine is going to take a lonnnnng
while to finish on his buttons-on-wires soroban/abacus. :-)

<insert small bg tape of "she ain't got no yo-yo" song...>

From: Carl R. Stevenson on Aug 4, 1:55 pm

>Steve,
>
>The comment period isn't OPEN yet (the release of the NPRM by the FCC
>doesn't "start the clock," it's the publication in the Federal Register,
>which has not yet happened.

Heyo Carl! Welcome again.

Sunnuvagun you are RIGHT! I checked the FR at the GPO site
and there is nothing there yet from 15 July (the NPRM release
date) through 4 August!

Amazing...two weeks gone on this NPRM and it hasn't started yet!

Even worse, at least a dozen ham-interest websites have made it
a cause celebre, front-page headline thing (which it is)...and
lots of folks are now urging Comments to be sent in! Everyone
from Nancy Kott at FISTS on out... :-)

>Thus, technically speaking, while the docket is open in the ECFS, comments
>filed now are "premature," so I would suggest you consider refraining from
>"dis-ing" people over something where they are behaving in a completely
>appropriate manner.

Stebie don' need no steenking rules! :-)

See 25 Jan 99 on 98-143, 10 days AFTER the supposed window close
on the Restructuring NPRM. Stebie was in there dissing me. :-)
He hasn't stopped since.

>I fully intend to file my comments on the NPRM within the appropriate,
>prescribed time window. I expect others who understand the comment/reply
>comment process, as prescribed by the Administrative Procedures Act will
>likewise file their comments in the appropriate, prescribed time window.

No problem here. I can resend my Comment in the click of a few
mouse buttons. It will still apply. Morse code is only 161
years old...it's had its time in the sun.

Thanks for the advisory. Will have to check the Federal Register
daily now to see if 05-235 has had its window open.

No breeze. Or, as Shakespeare almost wrote it, "Lo, what ball
through yonder window breaks?" :-)

dit bye

Dee:

Some would argue Latin is not dead, churches and doctors still use it...

It is dead, both cw and morse, some may live to see the proof, some may not have long enough. This is the digital age.

Here in this newsgroup you can find many who try to form religious doctrine over out dated specs, faqs and past limitations of the net. This type of behavior is seen in many groups of individuals, the "control freaks" are here on the web too.

There is a real cult which has formed around CW, they have their church, high priests, hierarchy and devoted following, you might refer to them as "CW Groupies" if CW was the name of a rock band.

The data transmission protocols which could be used on amateur radio as we speak here are mind numbing. However, phone and cw do server hobby uses here. But, data transmission of binaries, graphics, movies, etc. are not suited to either. Two bursts of encrypted/compressed packets happening a a blink of an eye can fill your screen with enough text to keep you reading for two minutes. Or, an IM protocol could be employed in "text chat" with one freq serving as a party line and only grabbing packets they are interested in... possibilities are endless...

No, no one would pause at a simple cw reader, you would allow two machines to chat together, no human needs to tap a key, it is far below what the human mind was meant to do, it is akin to pounding on a skin covered drum, however, if MadMax ever happens, I will grant you it may have a use, "God" forbid that ever occurs... but then, if it does, there will be tons of CB radios out there which will be pressed into use... they will be able to be found in almost any diesel truck on the highway, and base stations in the smallest of towns, alternators removed from cars and driven by small gas engines off lawn mowers, etc.

I don't think there is going to be that many hams with a key in their hand saving the human race... and you will not likely know the heroes until the event happens... the greatest plans of mice and men...and all that...

But, hey, the dreams of men are what keeps them going, and there is always only a problem when they attempt to force their dreams on others--especially when the dreams become decades old... become brittle and turn to dust in the face of harsh reality...

N2EY:

Has our society been so dumbed down you must even ask a question like that?

I would have question fitting using a commercial radio for those whose
only use is to buy the damn thing and chat... of course the question of
rf hazards would always be important and should be included.

I would have tech questions fitting those who wished to build their own
equip, so I knew they were properly prepared...

For those constructing their own antennas, proper tower, mast, etc
questions to make sure they were prepared to do so safely...

Of course, you would need a group of minds to arrange the question
properly and sanely...

You should be able to extrapolate from the above and see how it would
apply to and given situation--hardware--software--rules--regs--etc

UCM:

The new surface mount technology will now require highly trained "Gnome
Technicians", the ones with the smallest of hands will be most suited,
with very, very small soldering irons... and BIG magnifying glasses...

because it is useless to me, simple fact, and i will never know wether
it is usefull to any other particular person, unless they tell me and I
believe them

> >
> > > > That someone could use the simple assembly of the QRP rig

and you spport the Morse code test and therefore you opose me on the
field at all

>
> VEs are empowered to use all sorts of accomodations in the
> tests (both written and Morse Code) if needed. In fact, a Morse
> Code *sending* test can be substituted.

which doesn't meet the ADA standards of accomodation at all, since that
law allows me anything that will in fact work, my choice would be a
code reader

based my expeences in the past that is about all that would do it

However that aside you insist I develope some varraint of a skill that
I can't use.
> >
> > My station is at least one if not several such tool but you
> > don't wish to allow it without ahvng that ONE tool
>
> I have no idea what you are trying to say.

becuase you think Morse code is just a trival bit of work to learn, and
for some it is

and lacking that skill you would choose to sideline my station which is
able right now to work HF (I have up a G5RV conected to my ft 847
satelite rig which is also HF cappable

>
> > > > It is one the few occasion I can realy see much use

no becuase I blow everything On AM or on SSB or FM and still get a
license Code testing is deferent nothing else in Ham radio has that
status so your staement is simply not true

>
> --
>

> pass such a test?

I might well not be able to, that is the meaning of Dyslexiod Aphasia,
I would hear the S in might write Y it all but certain I would suffer
from one of these occurances if a minute was 27 letters, any time I am
changing media there is high chance for making such errors, there is a
decent chance if I am just coping writen text, indeed to take your test
seeing the writen word one at a time and trying to copy them first
leters I can make such errors I fequenly do in the newsgroup find
myself unable to copy corectly a word on the screen

Does not mean I can't read text and understand it and tell you about
later
>

get it though your head, I have failed exactly that test a number of
times Jim
>
> I could see that if someone had an auditory or cognition problem,
> they might have trouble with both tests. But it seems incredible
> that people who would have no trouble with the first claim the
> second to be impossible, or even very difficult, for them.

In My case it is a set of learning disablities, varies people have
varies abilities
when you add morseyou have tranlating . to "e" which might make it to
the page as "y" when you sart with letters .- which I think is "a" I
may hear -. think "a" (becuase dyslexics reverse stuff) and might not
get even that "a" to the paper right

I do better with keyboards where I am tring to learn not the . is "e"
but is the trhid finger of left hand up one key (the touch tpye
position of "e" of course)

>
> Of course for some folks, "can't" actually means "won't" or
> "don't want to".

so to answer your title I doubt I could pass the test phoenetic test
you describe, unless it was realy slow, and certainly not with any test
anxeity

In My case it is a set of learning disablities, varies people have varies abilities
when you add morseyou have tranlating . to "e" which might make it to the page as "y" when you sart with letters .- which I think is "a" I may hear -. think "a" (becuase dyslexics reverse stuff) and might not get even that "a" to the paper right

I do better with keyboards where I am tring to learn not the . is "e" but is the trhid finger of left hand up one key (the touch tpye position of "e" of course)

Apples vs oranges. No other mode requires a "skill"
test which is exactly what the current CW test is...a skill
test.

> For the same reasons that you take tests which include questions on the
> limits of VHF/UHF ham bands to operate on the HF/MF ham bands.

But not one of those subject areas stands alone as a pass/fail
gate as does the CW test. THAT is the difference. You
want some questions added to the pool regarding morse

as a mode, no problem. That is, however, not the same as
having a single stand-alone morse profficiency test.

Cheers,
Bill K2UNK

AOF:

Look, they pose the most excellent argument, to their own argument, if you look closely...

First, they say there that CW is a useful current protocol, and that it is useful, then they say people are going to flock to use it and keep CW alive no matter what...

Then, they turn around and argue to keep the test, why? Because deep inside their brain, at the center where the denial does not exist, they realize without forcing people to learn morse, not many will (darn few in my best estimate.)

Isn't it quite obvious? They fool themselves (else they are liars), but if they fool you, think how others will judge the weight of your intellect...

It is all pretty clear, think about it...

Frankly, I think you should have to take a CW test... IF, and I say IF,
you are going to use CW, and perhaps they can "CW certify" a person to use
code--otherwise let them only use phone and machine protocols...

Do you also think one should take a keyboard (i.e. typing) test to
certify ability to use digital modes?

How about a speed profficiency test for using phonetics
in voice mode?

Bottom line, there is no minimum code speed required
for anyone to use morse code as a ham. That is the
case now and has always been the case.

Cheers,
Bill K2UNK

Maybe yes, maybe no. In this case, the majority (if one
looks at the comments already filed) appear to be
running better than 2:1 in support of the ending of
all code testing. Sure looks like a majority to me.

Cheers,
Bill K2UNK

K2EY:

I think the majoritys' will is what is occurring, and no, I don't think a minority is going to be able to stop the majority here, perhaps if you got a group together called "Gay Hams for Morse!" it might float, for some reason the homosexuals are able to enforce their will on others effectively, perhaps a study of their methods and their adoption could lead to success.

Bill:

Have you ever used IRC chat and "conversed" with a slow typist there?

It sucks, yes, I would allow for having one come up to speed before using IRC chat, or hang in a newbie room until coming up-to-speed. That same system would work well for Morse... let'em stay off the key and on a "newbie frequency" until they get up to speed and have range of the whole cw bandwidth... sounds logical to me!

Writeth this OF on 21 July: "This "NPRM" is not "an opportunity to comment", it's an announcement about the way it's absolutely gonna be. Period. They'll go thru the NPRM motions only because the law sez they have to and they'll patiently tap their fingers on the table until the deluge of desparate commnents is over then declare the POS they published today a done deal." Ignore the speling and thankew.

Anyone who thinks that flooding the FCC with "comments" will make a whit of difference on this one doesn't understand how/why democracy beltway-style actually works.

Today's Scorecard in the NCTA v. PCTA Amateur Championships!

As of the of the day in DC on 4 Aug 05, WT Docket 05-235
Comments are:

Total 662
In-Between/Dupes 67*
Against Elimination 152
For Elimination 443

* In-betweeners are those "following" the ARRL plan to scrap code testing for all but Extras, therefore with feetses in both camps. In that group also are duplicate Comments and a few who wish a higher morse rate for all below 30 MHz! Excluded are the "joke" comments with names and given mailing addresses which are obviously phony.

Note: The DATE RECEIVED block on the ECFS Search Listings is running on Eastern time zone and the calendar date for all Comments is set accordingly.

To date, the NCTA:PCTA ratio is 443:152 or 2.9:1 ratio. The number of "in-betweener" Comments has increased markedly over the second week of Comments.

Stay tuned. This NPRM has NOT YET appeared in the Federal Register so the Comments seen so far may/may not be used by the FCC in determining the final Report & Order. Thanks to Carl Stevenson for pointing out the Federal Register non-appearance.

Len:

Kinda of disappointing, you would think this would heat the blood much more and the comments would have been much more, even though, apparently, they comment too quickly... dismal figures there... I am thinking about seeing a shrink next week and seeking medication to fight off this depression... Krist those of "Brotherhood of the Dead Key" must be wearing black arm bands... perhaps contemplating a change of church! (away from the "Jehovah's Witness to the ARRL", "Holy Order of the Brothers of the CW Cross to Bear" or "Brotherhood of the Brass Key")

I expected those for elimination to run 10:1 against those supporting! I just can't understand it... I will use this bottle of Jim Beam to console my spirits, a "Meeting of the Spirits" if you will...

John

He figures if he does it this way it will appear as though someone important is being reported on by someone else who deems it important to report ON him...rather than being the basement-dwelling parasite that he is. You know...Kinda like that "When E.F. Hutton speaks...Everyone listens..." commercial...

Yep. In fact they let us know that back in '99.

> Does anyone deny that the horserace is fixed and that the
> majority wishes have nothing to do with the outcome?

The majority didn't get what they wanted back then. More than
half of those who commented wanted at least 2 code test speeds
but we got 5 wpm across the board.

Still, it will be worth commenting just for the principle
of the thing.

Stop and think about this for a second, Markie...

On the one hand you claim I am "nuts enough to do it" , suggesting
that I'd actually perpetrate an act of violence against you...

Yet here you are stirring the pot.

If I thought someone was a potential threat to myself or my family,
the LAST thing I'd do is get in their face!

The sum of it is that your own suggestion that you're in any danger
from me is ludicrous, as >>I<< have been saying for years.

> > > It is you being stupid to even type that
> >
> > And it's even more idiotic for a putz like to you keep repeating it

Nope. You WANT it to be a threat, because that then plays into
your "victim" role.

> (UNSNIP)....foruately one you have havne't carried out,
> but one you keep repeating, such as your threat to come to the UP

I don't "keep repeating" any threat. YOU keep repeating it.

As for any potential travel to the UP, guess what...?!?!

I can travel anywhere in the Untied States I care to go...Just
like YOU can...

>
> because it is useless to me, simple fact,

That's been proved to be untrue. If manual Morse by another operator
makes it possible for you to work that operator with an automated
system, that makes the mode useful to you.

Doesn't mean it must be tested.

> and i will never know wether
> it is usefull to any other particular person, unless they tell me and I

> and you spport the Morse code test and therefore you opose me on the
> field at all

Not you personally.

I also support written tests. There are folks I know who have
repeatedly flunked the written tests - something about "math
trouble" - "never been good with numbers and rote memorization"

Why should they have to learn all that stuff?
> >
> > VEs are empowered to use all sorts of accomodations in the

For some the written tests are trivial, for others they are not.
Shall they be eliminated because some people can't seem to pass them?

> and lacking that skill you would choose to sideline my station which is
> able right now to work HF (I have up a G5RV conected to my ft 847
> satelite rig which is also HF cappable

If someone buys a rig and sets up an antenna, does that give them the
right to demand a license?
>

Maybe not. Nobody knows exactly which questions are on the written
test.

> Code testing is deferent nothing else in Ham radio has that
> status so your staement is simply not true

The point is that you still have to learn stuff you'll probably never
use just to pass the written test.

One last comment.

Back in 1990, FCC created medical waivers at the behest of a now-dead
King wanting a favor from then-president Bush. FCC waived the 13 and 20
wpm Morse Code tests if the applicant could show a doctor's letter.

Canada has recently made the Morse Code test part of the overall
scoring
rather than a stand alone test.

More than 5 years ago, I proposed here a "Chinese menu" form of license
testing that would allow much greater flexibility in testing.

But the near-unanimous reply from NCTAs has always been that the Morse
Code test must be completely eliminated - no compromises, no more
waivers, no score-blending, etc.

In fact, some NCTAs and their organizations, like NCVEC and NCI, went
a step further and pushed for lower *written* test standards such as
free
license upgrades and a "Communicator" license.

What's next?

I don't think the FCC has domain over internet. Who'd enforce
your rule/requirement?

> That same system would work well for
> Morse... let'em stay off the key and on a
> "newbie frequency" until they get up to
> speed and have range of the whole
> cw bandwidth... sounds logical to me!

Have you found the CW segments of HF heavily
populated with very slow operators? Doesn't
seem to be any problem today.

Do you expect that
to change if the code test is ended completely?

What you (John) suggest happens by default now.
While there are no "newbie frequencies"
(although the novice segments could be viewed in
that light), in reality, no one, including yourself, is
forced or required to engage with another ham
who operates code (or keboard) at a speed
that is too slow for your liking. The choice
is yours. No pretest needed.

Additionally, having passed a test in no way
guarantees continued profficiency. I passed
13 wpm over 10 years and haven't use code
in probably 8 years or so. You'd probably not want to
have a CW QSO with me now :-)

Cheers,
Bill K2UNK

> Diddy dah dit dah. Dit-DIT.
> w3rv

Bottom line here...

1. The discussion as to value or need to have any code test
was completely discussed prior to 2000 when the FCC
specifically called for such discussion (NPRM 98-143).

2. Thousands of comments were filed with various
rationals in support of code testing....the FCC
in their R&O reviewed and dismissed every
pro-code test argument....

3. The ONLY reason the FCC kept even a 5wpm test
was because of the international treaty requiring a code
test.

4. The WRC-2003 review resulted in elimination of
any code test requirement in the international treaty with
almost unanomous agreement by the countries
to do so.

5. The current NPRM, in short, deletes code testing
for USA amateurs as allowed now by the international treaty.
The FCC, now has an open comment period for
discussion of the proposed change.

6. Unless some great new and profound reason to
retain code testing surfaces via the 05-235
comment process, any prospect
of keeping any code test is just not going to happen.
The old arguments (and that's all that any PCTAs
have been rehashing) have no chance of winning
out since they failed in 98-143, WRC-2003, etc.

7. Any argument or claim that the code test should be
retained if a majority of hams want it so isn't
going to happen either.
For two reasons:
(a) The FCC doesn't make the rules that way and
(b) The majority of current comments are actually
running better than 2 to 1 in favor of total
elimination of code testing.

Cheers,
Bill K2UNK

Bill:

Sounds like there is no problem then, let the "key bangers" hold to their own "key banger club", I don't think the new cb'ers on phone are going to bother them. If there are happy with their numbers on key, great! Seems like you won't mind any cb'ers which might like to try a key and head over towards you at 1wpm, good luck!

Sounds to me like the whole problem is just an imagined one! Can't imagine why some jerk ever even mentioned some problem, damn fool!

>
> Sure i qupyr often

How do you "qupyr"...?!?! Is that some Arabia sport? Sounds like
it might be kin to "Cricket".

> You still deny one shot one kill

I never denied saying it, Markie. You're welcome to try and
"qupyr" where I did...But you and I both know it's not there.

I DO deny and always have that it was any kind of a threat. It
was a response in kind to your "best shot" quip. Any other insistance
on your part is just childish ranting.

> > A "quote" is verbatim...word-for-word.
> >
> > Saying "you said it" is not quoting.
>
> never said it was

But you insist that just by saying I said something without
>>properly<< quoting it is a quote. That's not correct.

> > You've "quoted" nothing. By the way, I am using the Webster's
> > definition of "quoting", not some made-up "maybe it means this today"
> > stuff like you do.
>

To prove that you were right and I was wrong.

Of course THAT won't happen.

> > Cite a post. A "real" quote.
> >
> why?

To prove that you were right and I was wrong.

Of course THAT won't happen.

> > > > > > Provide a cite, Markie.

> yes I did and I cut your made up repsonse to it

You cut what I said because you're a coward and didn't like
getting your nose rubbed in your silliness again. Nothing less.

> > Anyone can back up two posts and see it.
> >
> they can you just don't like your own editing thrown back little baby

I don't cut comments that I am respoding directly to, Markie.

You do. You try to avoid the truth, which is why people like you
lie so readily.

> > > > > > (Hint: This will keep you busy for a while since it never
> > > > > > happened...)
> > > > > >

> gnerla impotent

What rants and raves?

As for what looks "gnerla impotent", I think an 38 year old who
writes like you do and won't take steps to fix it is pretty impotent.

> > So far, all I've done is take YOUR words and show them to be
> > false.
>
> you have done NOTHING of the sort

Sure I have.

> You can't prove them false, I guess you just don't understand the word
> proof

We have your admissions, Markie.

You first stated you were a Colonel in the Army. I waved evidence
in your face, including the name of the agency, the person I spoke to
and the phone number, and you dropped your lie about that.

The we have your stories about NOT being "Mark Morgan" under
different screen names (as if that broken dreck of yours could be
hidden). Then you admitted who you were, then tried the "I was trying
a different ISP for financial reasons" story. Of course that doesn't
answer why you lied about your identity.

Lately we have your "I have never been a mental health patient"
only to get tripped up on your own stories yet again. And your
rantings agains Hans after he tried to help you out...Priceless!

The list goes on, but why waste the bandwidth?

> > > > But what it REALLY is is me proving that you haven't got a leg to

> > those words ('..is is me means nothing...") out of context.
>
> and you have now also cut them out of context

Nope. I made certain I re-quoted the post to avoid that
accusation...

But YOU did!

> cuting stvie losing it

Lying Markie getting tripped up on his own lies.

Here's a "cut", but not the direct comments that I am responding
to.

> > It's not suggestive of a single thing other than you are
> > desperately trying to find a way out of the dead end you've gotten
> > yourself into, and doing poorly at it.
>
> not at all, noting desperate, why would I BE desperate, nothing you can

> better what you think of me

Yes...you're desperate.

Why are you desperate? Perhaps because you think you're being so
cutsie and witty, only to keep getting your nose rubbed in your own
dreck and lies.

> all that is going on is simple I'd rather attack than contiue to be
> butt of your attacks

But it's YOUR silliness that keeps tripping you up, Markie!

I just point it out!

> you brought this on yourself, whn you denied i droped the matter since
> it was bit less clear but your brought it and demanded I apolgize and
> made an issue of again so fine I do think it is true and it beats other

Nope.

I'll just keep rubbing your nose in your dreck until you leave the
group, subscribe to "Hook On Phonics", or commit your own suicide.

> > You're a liar.
>
> at times when it protects me sure I am

Silly Markie!

Your lying hasn't protected you from SQUAT!

As a matter of fact, it's landed you squarely in the middle of
this mire of humiliation!

> you lie all the time for no reason but you can

No, I don't lie "all the time" even though I could if I wanted to.

Why would I?

> > > thou doth protest too much
> >
> > Still not getting it right, Markie. Try again.
>
> but you understand so it is right enough

I understand that you got it wrong.

> > > stevie I told i would all of you sexual references
> >
> cuting stevie play english cop

Markie avoiding the truth...again.

> > > > > > But that you are lying about it and commiting the very "libel" you

> > > improper, possibly ilegal
> > >
> > > Uh huh...riiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiight.
> >
> > agrement I see, in legal terms at least

Nope.

Sarcasm.

In no particular terms.

> > > 3 that isn't clear exactly how you are doing it
> >
> > What's not clear to you is that you're getting your self in trouble
> > making such accusastions.
>
> what trouble?

You don't know? Sheesh, Markie, you're the big legal expert...Why
don't you tell us what making an improper accusation against a licensed
professional in a public forum is called...?!?!

> more threats
>
> haven't you learned that road doesn't work?
>
> are you really that dumb

Nope. But you seem to be.

> > > you keep making stuff up or over simplifing statements
> >
> > Nope. You said I was on the dole.
>
> yep and a few posted back you added to that statement

Nope.

YOU tried to state thay by knowing anything about the subject at
all made me "guilty".

I expounded on my duties as a licensed health care professional.
You continued to misrepresent the truth.

> > Now you're even lying about that.
>
> nope you just will get right I am saying and what you are adding to my
> statements

I say you're caught in a dead end and have nothing but blatantly
mistruthful statements that you use to try and validate your other
blatantly mistruthful statements.

> > > > It's not true...Not in fact, not in fantasy. Not under my "real"

I've been out IN the world, Markie...I've set foot on every
continent at least once (save for Antarctica).

> you alloy fantasy and reality together to point I am even sure if you
> touch reality

Sheesh, Markie...Cute coming from a confirmed mental health
patient.

> > > more itelavancy cut
> >
> justing cuting the bluster

You mean cutting out stuff you don't want to have to own up to...

No problem...You leave a lot of other stuff to unravel.....

> > > > > > A lie is a lie no matter how eloquently it's phrased too.

> nope I don't, it is never your busness

It's my "busness" once you post it in a public forum or if it's a
matter of public record.

> > > > > > It's very obvious that YOU have had dealings with it...Refering to

Markie....

THIS WEEK you acknowledged being in the mental health system for
ANGER issues.

You acknowledged that you HAVE PRESCRIPTIONS from those doctors.
Remember..?!?! You tried to accuse me of "libel" for stating that if
their writing, which YOU were commenting about, was a lousy as YOU
said, then they were unprofessional...?!?!

Hmmmmmmmmmmmmmmmmmmmmmmmmmmmmmmmmmmmm.....?!?!?!?!?!?!?!?!!?

Nice try, Markie.

Busted again.

Or have you been holding on to the same bottles for twenty+
years...?!?!

> > > congrats
> > >
> > > >

> >
> cuting stvie pleling english cop

"Cutting"

"Stevie"

"playing"

"English"

Congratualtions on getting "cop" right, but you didn't end the
sentence with a period or initiate the sentence with a capital letter.

> > > > What I HAVE said is that (a) you need help and (b) you're lying
> > > > about it when it's very clear that you ARE in the mental health system.

I'm not practicing medicine, Markie.

You're welcome to quote the parts wherein you think I am, along
with references to state law that supports your contention.

> > > > Anyone who brags about being a chronic liar has deeper problems
> > > > than "anger issues".
> > > >

> > >
> > Oh..you acknowledge the truth that you're a liar, yet you don't see
> > the probelm with lying...?!?!
>
> no I don't

Then you support MY contention, as a health care professional,
that you are demonstrating inappropriate, anti-social behaviour.

> I reject the motto that "honesty is the best policy". It is very often
> the worst. I have looked at the way the world works, and made a
> philsopical and religous choice, constitutionaly protected by the way

It's not Constitutionally protected when it is used to commit a
felony, Colonel.

And you again supprt MY contention that you're demonstrating
inappropriate, anti-social behaviour.

> > > > > Indeed it is one the reasons I show up here dealing with such a

>
> sure are

Nope.

> > There's no bigotry of my utterance.
>
> big lie there Stevie

Double nope.

> > And if expecting adults to speak like adults and act like adults
> > is "absurd", then you do have a lot to laugh at.

>
> anytime you are prepared to start acting like an adult please feel free

I already am.

I am trying to effect a change in your inappropriate anti-social
behaviour.

Constitutionally protected, by the way.

> > The problem here is that you don't even realize who's laughing at
> > you and why.
>
> wrong again I know you are laughing, and why, however in my view that
> just your bigotry

Nope. No bigotry...and I am not the only one laughing at you.....

> > > <cut> You're ate up with not being able to get ahead
> > >

> fine
>
> new rule
>
> Stevie when you make up stuff by adding falsehood to what I said I'll
> cut it

I didn't add anything to what you said, Markie.

Look up.

I didn't edit a single word you typed.

> > You have recent;y stated you're caring for a disabled person
> > (yourself, no doubt), but then liken it to play. One wonders what
>
> another lie I have not liken caring for my father to play, but that is
> not my job, I care for the old man as much as he needs on top of
> working

You didn't say you were taking car of your father.

You said you were caring for a disabled person, suggesting that
you were in the employ of a third party.

> > you're playing WITH with this disabled person.
>
> more libel

Nope.

> cuting stevie ####

"Cutting".

> > > > and with people being able to see right through you, even when they
> > > > can't see you in person. This includes your "I am a victim" routine
> > > > which you use as a crutch.
> > >

>
> not really it is clear from what you type back you have distorted it to
> the point you nothing about me, you think you know plenty I agree but
> you don't

Sure I do.

Scroll back to the top of THIS post.

I know you won't "admit" it, but you and I (and anyone following
along) knows that I've busted you so many times that it's not
funny...and all with YOUR words.

> > You've outted yourself,<cut>
> You outed me you and MD

Huh...?!?!

> <cut> proven then admitted yourself a lair,
>
> ok

Sheesh.

> <cut> and
> > then found out to be fugitive from the mental health system.
>
> more lies

Nope.

Truth.

> > > > People try to give you direction, both overtly and covertly, but
> > > > you're bound-and-determined to beleive that "how" you are is normal.
> > > > It's not. It's an unrealistic assessment of your problems.

>
> becuase as John has pointed for me it isn't just a matter of "some
> cheap tech"

Sure it is. YOU claim all these real estate and real property
holdings, but you can't afford a few bucks in software...?!?!

> and it would nothing to shut you up

It would sure limit the number of times I have to query you about
your fractured grammar and functionally illiterate spelling.

> > But you don't.
> >
> > > It is not as you
> > > insist a mental defect esp not a simply correctable one, years in my

> not according to the pros and the folks that do the tests

I am certain the only "pros" you deal with are at the corner of
First and Main Streets.

If you were to engage a half-way competent occupational speech
therapist a lot of your dreck would clear up.

> > You know there's a problem. You know there's both therapy and
> > tehcnology to help you overcome it. But you refuse to use eitehr to
> > help you.
>
> another lie stevie...(SNIP)

Nope.

> the lie of course the notion everything can be
> "fixed" most stuff can be mitagated to some extent but little can raly
> be "fixed"

The lie here is Mark Morgan trying to squirm his way out of
admitting that there's a fix for his problem.

> indeed if you got help for your problems i doubt they can fixed either,
> they could be mitagated but you refuse to do so

What problem?

> > > > As for "provoking" and "bigoted", those are issues of YOUR own to
> > > > deal with. Again, they fall squarely into your "I am a victim"
> > > > routine.
> > >
> > > nope they are you being a Bully indeed I have no realy with Jim he
> > > doesn't bully me. I have issues with Dave, but that is becuase he is a
> > > jerk not a bully.
> >
> > Dave's not a jerk...Not by ANY definition.
>
> wrong and an clear lie, since i define him as one

Your opinion doesn't make him a jerk.

It makes YOU look like a fool since Dave's professional and
"Amateur" careers are both stellar and without tarnish.

You, on the otherhand....well...Guess we've gone there enough
today...

> > Nor is Jim.
>
> never said jim was

Sure you have.

> > > I know you are a bully because I watch you bully everyone you disagree
> > > with, not just me. that tells who is seeing thing straight
> >
> > The you've just proven that you need glasses, Markie, because

> > there are more folks here than you, Brain and Lennie that I've had
> > disagreements with, and manage to move on.
>
> realy name one? cloest one would bil sohl but he rarely posts

Jim Miccolis. Kim Walker. Mike Coslo. Larry Roll. Cecil Moore.

> no regular that you respond to do you seriously disgree with

Wrong.

I just don't find it necessary to go toe-to-toe with them since
they treat me with respect as I do them.

Nor do they lie, deceive or otherwise attempt to redirect the
discussions with inappropriate content, threats, accusations of threats
or other such silliness.

> but in any case you think that you might not bully everyone it becomes
> valid to say you bully no one

I don't.

> realy sick stevie

"Really"

No, I'm not, but thanks for asking.

> > Too bad for you.
>
> yes a truthfull stament

"truthful"

"statement"

And still too bad for you.

Steve, K4YZ

Omission of relevant facts can be a form of lying.

Here's the whole story:

I read that bit of W5YI propaganda, and also the original articles in
"200 Meters And Down" and the QSTs of the time.

(have you done so?)

The referenced article does not give all the relevant facts.

For one thing, the article claims that "higher speed" code testing has
been
used to "limit the number of hams since the very beginning of ham
licensing".
The fact is that all US hams were licensed in the US by 1912, 24 years
before the 1936 happenings cited. The code test speed after 1919 was 10
wpm, and the 1936 increase to 13 wpm - hardly a quantum leap.

To get a clear picture of what was actually happening, it is important
to
understand what ham radio was like back in those days. After WW1, ham
radio
almost ceased to exist. It was brought back to life by the dedicated
efforts
of a few enthusiasts.

Amateur radio was not even recognized by international treaty until
1927. The
1927 treaty resulted in stricter new rules and much-narrowed bands.

By 1929 there were about 16,000 hams in the US. Almost
all of them were on the 160, 80, 40, and 20 meter bands. A typical ham
transmitter was a self-controlled power oscillator, and a typical ham
receiver
was a three tube regenerative. Sure, more advanced techniques existed,
but few
hams could afford them in thos Great Depression years.

Code skill was important in almost all radio services. 10 wpm was not considered as anything like professional level - 25 or 30 wpm was more like it. (This was with semiautomatic keys for sending and manual typewriters for
highspeed copy).

1929 saw two big changes to ham radio. The treaties signed in 1927 came into
effect, which cut deeply into the 40 and 20 meter hambands (70% of 40 was lost, and 80% of 20). The treaties also required much cleaner signals from ham rigs. The Great Depression followed soon afterwards.

But the Depression and the new regs had a surprising effect on ham radio. The
number of hams took a sharp upturn in the early thirties. By 1935 there were
over 46,000 hams - almost TRIPLING the number of just five years earlier! But the turnover in amateur radio was approaching 40% per year.

This meant that most hams were raw newcomers, with relatively little technical
knowledge or operating skills. A ham with 5 years on the air was a veteran, one with 10 years was a grizzled old timer. Problems of interference and crowding abounded. Complaints from other services threatened the existence of ham radio.

The problem was that thousands of newcomers were learning just enough to pass
the tests, assembling simple stations with little understanding of proper
design, adjustment, or operation, and putting them on the air. Many of these
newcomers lost interest quickly, particularly when the limitations of their
knowledge and skills became apparent. The newly formed FCC was concerned, as
was the ARRL.

The action proposed by the ARRL to the FCC was in two parts: Raise the code
speed SLIGHTLY, (10 to 12-1/2 wpm) and make the written test more comprehensive. The changes to the written tests are all but ignored by the NCI
article.

The goal was NOT to limit the total number of hams, nor to hinder or deter anyone from getting a license, but to control the flood of newcomers, and make sure that the new folks had the necessary skills and knowledge.

Look at the complete picture, and the action of the FCC in 1936 makes sense.

Hey!

Are my suspicions correct, and this is a gay ham group?
Anyone know where the straight rooms are?

John

yes you mean me personaly

in supporting the current system and its predeceasor you personaly
oppose me and anyone like me

your statement "Nothing personal" is dishonest
>
> I also support written tests. There are folks I know who have
> repeatedly flunked the written tests - something about "math
> trouble" - "never been good with numbers and rote memorization"

and I oppose there being real math on the test since it isn't needed in
this day and age

the only realy rote memorizetion pretains to the rules and the rules
are of ocourse to some arbitaru
>
> Why should they have to learn all that stuff?

and much of it, they should not have too at least with it they some
choice I have elsewhere outlined my thoughts

> ADA is about rights. A ham radio license is a privilege.

Bullshit what do you know of the ADA?

ADA says In part and oversimplfies of course I have the RIGHT that any
barrair in my way (wether oof a RIGHT or aPrevldege I can earn) be
justified. It is a prevledge to have a drivers license, therefore
anything in the way of applaicnt must be justified, a blind man can't
drive, therefore ADA doesn't help, someone with NO morse Skill can
still operate a radio, therefore he has the right that any barrar be
truely needed

>
> Have you ever asked the VEs for any accomodations?

can't you read.

I have taken and FAILED test sent A LETTER at a time I have done so on
number of occasions

no and your question is nonsense, and insulting

anyone has the RIGHT that any barrair in their way be fair after all I
can even operate with Morse code which the purpose of the test I can't
pass

> >
> > > > > > It is one the few occasion I can realy see much use

> just can't seem to pass those.

no becuase it isn't true of anyone that can operate the radio
afterward, you find me a REAL person that can't pass the test in some
form, as I undersatnd they be read and ansered aloud I look at it and
reconsider

the key word of course is "seem"

as I sate else (another thread I believe I would change the writtens
quite a bit, Idealy I suppose I should be pushing for it NOW along with
code, but being human I fight first what can be fought and affects most

in correct Fred Maia, W5YI (i may be blowing the name but the call is
right) proposed something Like the new Canada system, publishing this
on the Old NCI website

As Far as I know NCI is calling Canada a victory for us
>
> In fact, some NCTAs and their organizations, like NCVEC and NCI, went

now you are fibbing about the NCI position, and NCI hardly control
NCVEC

and the ARRL wanted one time upgrades, as well, haven't seen a word out
of you about that

>
> What's next?

who knows, but that you pose the question tells a lot about you,
nothong I find esp favorable either

it shows something of the Luddite fear of change that the Nocoders
accuse the Procoders of

Bill, there was also discussion 15 years ago in FCC 90-53 on
the creation of the no-code-test Technician class.

>2. Thousands of comments were filed with various
>rationals in support of code testing....the FCC
>in their R&O reviewed and dismissed every
>pro-code test argument....

That's true enough but is not acceptible to the MMMs in here.

>3. The ONLY reason the FCC kept even a 5wpm test
>was because of the international treaty requiring a code
>test.

Well, there was undoubtedly a lot of heated discussion from
a lobbying group for a noted membership organization...

presumably that is since we in this "democracy" don't get
to actually observe such. :-)

However, the final word was in 99-412, the R&O establishing
this recent restructuring.

>4. The WRC-2003 review resulted in elimination of
>any code test requirement in the international treaty with
>almost unanomous agreement by the countries
>to do so.

The bellweather of that was the IARU's decision to support
optional code testing by administrations beginning in 2000.
U.S. hams tend to be a bit bigoted about their "preeminence"
in amateur radio so they don't look at much of what the rest
of the world is deciding by theirselves.

>5. The current NPRM, in short, deletes code testing
>for USA amateurs as allowed now by the international treaty.
>The FCC, now has an open comment period for
>discussion of the proposed change.

Well, the Federal Register for 5 Aug 05 doesn't have any
mention of either 05-143 or 05-235...in fact doesn't have
any mention of the FCC at all. Neither have I had any
response to a query to the FCC on whether or not the Comment
period has "officially" started.

We will have to assume that it has started since, on the
13th day of opening of an ECFS slot (for 05-235), there are
almost 700 Comments!

>6. Unless some great new and profound reason to
>retain code testing surfaces via the 05-235
>comment process, any prospect
>of keeping any code test is just not going to happen.
>The old arguments (and that's all that any PCTAs
>have been rehashing) have no chance of winning
>out since they failed in 98-143, WRC-2003, etc.

Well, we didn't have the Homeland Security angle in '98. :-)
[that Department didn't exist then...]

>7. Any argument or claim that the code test should be
>retained if a majority of hams want it so isn't
>going to happen either.
>For two reasons:
>(a) The FCC doesn't make the rules that way and

The process of rule making is abundantly clear to those who
wish to see examples on the FCC website...or bother to look
in volume 1 of the 5-volume printed version of Title 47
C.F.R. One does NOT need to go to law school to understand

99+ percent of that. Hundreds of examples of the recent
past in civil radio to observe.

Too many have the false idea that "ham regs" are established
as if done in a local club or membership group. Not so since
the laws ARE laws, not "by-laws" and must follow legalities
of much precedence, possible review by the courts later, and
their effect on ALL citizens, not just the clubhouse folks.
Amateur radio is really a very small part of the activity of
the FCC...one indicator is that the "Amatuer" page from the
Wireless Telecommunications Bureau page doesn't have any
"headline" entries after 2002...obviously there were a lot
of things happening after 2002 but 455 12th St SW folks just
haven't bothered to update it.

>(b) The majority of current comments are actually
> running better than 2 to 1 in favor of total
> elimination of code testing.

On the 13th day of commenting on 05-235, whether "official"
or not, the ratio of For:Against on the NPRM is hovering
around 3:1 in favor of For as of about 1 PM Eastern time with
680 entries. That's an overall average of 52 comments a day.

Note: The above doesn't take into account the "in-betweeners"
who agree that "lower-class" licensees should not be code-
tested but Extras or Extras and Generals should be code-tested.
In-betweeners account for about 10 percent of total comments.
Those in-betweeners could be taken into the For side or the
Against side but a rather clear majority FOR the NPRM would
still ensue, the ratio still ABOVE 2:1 in favor of FOR.

Now it is predictable that someone will rationalize "the
sampling is too small" or that "we must wait to see the
'true' trend" but that is still little more than spite on
their part. Morse code testing is a HIGHLY polarized subject
and there has been a two-decade growing opinion to get rid
of it as a federal regulation. It should now be abundantly
clear that the MAJORITY feels it should be eliminated.

What is most strange to me is that there is so little
mention of the Against side on establishing an "ex-officio"
(i.e., not by federal regulation) radiotelegraphy award or
certificate of merit by a NEW group to demonstrate the
alleged efficacy of morsemanship skills. I can see only two
commenters hinting at that. Now if morsemanship is so darn
good, so superb, so attractive to all who try it, then it
would be natural to assume at least one new group to spring
into existance pushing for morsemanship. All that appears
in the comments Against are the tired old cliches and
morsemyths which have been seen by me for a half century.
Those old warhorse maxims just haven't done the job to

attract enough. Those who have made it through the federal tests rationalize that "it is still good" but they are just whistling in the graveyard...they are in the MINORITY now and they are (as they should be) very uncomfortable.

dit rid

>just can't understand it... I will use this bottle of Jim Beam to console
>my spirits, a "Meeting of the Spirits" if you will...

Well, settling for a mid-morning cup of coffee instead, my take
would have been a 4:1 ratio in favor of tossing the code test.

That's my old opinion based on slowly getting into the Elimination
fray about a quarter century ago...and having the advantage to
work full time in the REAL HF communications field a half century
ago.

What the rabid hams can't see is that there is MUCH MORE in the
whole of electronics to interest hobbyists. Note: Ham radio IS
a hobby activity regardless of the posturing and puffery of its
"servicemen" and "radio" is a subset of the whole of electronics.
For example, the hobby (and businesses supplying) of robotics
grew at an alarming rate in the last 5 years, catching me by
surprise...and I try to keep a pulse feel on the whole of
electronics. Such differing hobbies draw personal (hobby)
interests away from the "purity" of ham radio...and can account
for a lessening interest of either of the For or Against NPRM
groups. Ham radio gets the "who cares?" treatment and hobbyists
go to other things more fun and with less of the regimental,
strictly-ordered "fun" of being a "serviceman."

---

John, it may interest you to note that NCI was conceived and
begun by Bruce Perens, himself a 20 WPM tested Extra...a few
years BEFORE the release of 98-143 and dropping of the present
code test to 5 WPM.

It isn't that No Code International is that influential, but that
it is a coming-together of LIKE-MINDED INDIVIDUALS from all over
the world to banish the administrations' "necessity" for a morse
code test. The IARU got convinced and was a major mover and
shaker to rewrite S25 and to make morse testing optional in S25.5.
Carl Stevenson of NCI was on the scene in Geneva two years ago
to help push that along.

Elimination of a federal test for morsemanship started as a
small snowball decades ago. It has been rolling along steadily
for years, gathering momentum, gathering mass, and now has
become HUGE. We must pity those who stand in its path since
this is no Tienanmen Square and the no-code-test "tanks" aren't
stopping for anything or anybody. <squish, squish>

not when you add your other attacks and your mentioning about coming to
the UP

you behave a in threatening manner

you threaten others

>

> lie so readily.

nope

In defference the wishes of Others I am not responding to ceratin
classes of your atacks and cutting them

in other cases I am cutting your tangentail nonradio stuff

I am also cutting your spelling cop stuff

doesn't leave much in many posts

>
> > > > > > > > (Hint: This will keep you busy for a while since it never

> answer why you lied about your identity.

more of your fantasy no lie about my Idenity was made therefore no
answer about why You show me where I denied being me and you might have
something (or you might be taking a statement out of context

>
> Lately we have your "I have never been a mental health patient"

never said that Stevie

I said I am not a mental health patient, and that pros don't think I
need to be when they 'finsihed with, oh about 20 years ago (plus or
minus)

Indeed I have said pro had seen me and decided I needed no further help
from them many times over the years.

Only in your twisted mind is that making the statement

you need to learn the difference between never and not, the present and
the past, basic things like that

> only to get tripped up on your own stories yet again. And your

nope to "trip me up" you have to merge the past and the present it just
ain't so
> rantings agains Hans after he tried to help you out...Priceless!

and then you describe being not answering the questoion as help that is
priceless
never
>
> The list goes on, but why waste the bandwidth?

and you have nothing for what you have wasted so far

>

> > >
> > > and you have now also cut them out of context
> >
> > Nope. I made certain I re-quoted the post to avoid that
> > accusation...

another lie, but you lie so freely, and obviously without even thinking
about it.

When I lie it is the result of a deliberate choice

which of person is the pathological liar

Id say it was you, but that is for a real pro to know, after all you
could be so delusional you realy believe all of the shit you spew

I don't know or care

if you like you may subitute "You are delusional" for "you are lying"
anywhere they appear in refference to you, I'll say lying since it is

easier to spell.

>
> But YOU did!

did what?

call you on cuting things of context sure did

called dave on it too

sure did

call you on trying to claim that quoting a whole post in which someone
else cuting something out of context

did that too

>
> > cuting stvie losing it
>
>
cuting substancless name calling

for what?

>
> Why are you desperate? Perhaps because you think you're being so
> cutsie and witty, only to keep getting your nose rubbed in your own
> dreck and lies.

never saw any one use desperate that way, but if you like then by
Stevie speak enjoying making youdance is desperate, I will of course
use the word as I see proepr in my own posts

>
> > all that is going on is simple I'd rather attack than contiue to be
> > butt of your attacks
>
> But it's YOUR silliness that keeps tripping you up, Markie!

not at all

>
> I just point it out!

>

> > it was bit less clear but your brought it and demanded I apolgize and
> > made an issue of again so fine I do think it is true and it beats other
> > topics you want to deal with
>
> WHAT are you TALKING about...?!?!

not talking at all typing prehaps?

yea a cheap shot but I enjoyed it with word spliting jerk like you

but when you denied being on the dole I droped it having some doubt at
that point, when you starting bring it up, I concluded my doubt was not
justified, and since you were attacking me for position i was putting
forawrd but that I believe to be true I might as well have fun and make
it

your protesting and venom have convinced me that you are getting some
type of assitance, and that you are ashamed of it, making it likely
ilegal or unethical, exactly nature unknown to me

>
> > > > > > > But in either case, I bet I know more about both than you do.

> Your lying hasn't protected you from SQUAT!

not avoiding squat avoiding you or some other bigot you may incite to
violoence

>
> As a matter of fact, it's landed you squarely in the middle of
> this mire of humiliation!

no mire of humiliation

it is in no emabarishing to me to have you go and on about this stuff

it does get boring

>
> > you lie all the time for no reason but you can
>
> No, I don't lie "all the time" even though I could if I wanted to.

you certainly do

>
> Why would I?

it is not fro me to dive into that sick mind of yours, it is for a pro
who i would hope has a "mental wet suit" before doing it

why? I don't why, I don't care why

Motive is not an element in any crime as a matter of law

and I make no claim to understand you motives for your multi year
Jihad, other being sure it arises from some deep seated mental illiness

>
> > > > thou doth protest too much

>
> You don't know? Sheesh, Markie, you're the big legal expert...Why
> don't you tell us what making an improper accusation against a licensed
> professional in a public forum is called...?!?!

it is called libel, but no libel here, simply string together your
statement in a logical manner, and coming to a conclusion

no improper accsuion has been made, possibly a mistaken one, but the
burden is on to prove it willful

>
> > more threats
> >

> > haven't you learned that road doesn't work?
> >
> > are you really that dumb
>
> Nope. But you seem to be.

I am not the one making threats stevie

you are

> > > What's not clear to you is that you're getting your self in trouble
> > > making such accusastions.

the above is another threat
>
> > > > you keep making stuff up or over simplifing statements
> > >
> > > Nope. You said I was on the dole.
> >
> > yep and a few posted back you added to that statement
>
> Nope.

sure did and everyone knows it

the more you twist everything arround
>
> YOU tried to state thay by knowing anything about the subject at
> all made me "guilty".

nope

another lie

I said no such thing

I said it added to the evidence against you

other things like the way you are trying to defend yourself against a
person of no account (to paraphrase you) and who knows nothing of law
(according to you) and is in no postion to harm you (according to you)
and yet you feel you must defend yourself in this manner, looks like
"awarenes of guilt", and becomes more evidence against you,

it takes a lot of stuff but slowly adding it up

it allows me to firm basis to from my judgement, and that being as
statement that you are getting some type of assitance, and that you are
ashamed of it, making it likely ilegal or unethical, exactly nature
unknown to me
>
> I expounded on my duties as a licensed health care professional.
> You continued to misrepresent the truth.

no misreprentation
>
> > > Now you're even lying about that.
> >

nope I have not

I acknowledged having them not being in a mental health system

>
> You acknowledged that you HAVE PRESCRIPTIONS from those doctors.

I have PRESCRIPTIONS from doctors for ALERGIES

cuting more libel

> Or have you been holding on to the same bottles for twenty+
> years...?!?!

nope I currently see an alegerist have always seen one, and will always
see one. I also handle my father PRESCRIPTIONS and see the writing on
them

You don't read very well

the only felony was your threat to kill me

that is a felony as exaplined I can say or do most anything while under
threat, I could have even tried to kill you if I thought it the best
course of action (and could meet other tests)

>
> And you again supprt MY contention that you're demonstrating

>
> Nope. No bigotry...and I am not the only one laughing at you.....

yes bigorty and no you aren't but I realy don't care about them either

I was addresing you so mentioned you

but lots of folks are bigoted and laugh at there subjects

>

certainly a lie stevie I "know" no such thing

all you have ever realy done is try and make fun of a disabled person
for being disabled

makes you a sadist PoS and nothing more

>
> > > You've outted yourself,<cut>
> > You outed me you and MD
>
> Huh...?!?!

you send email to after MD (a long gone poster here)agve stuff he
hunted sugeesting that I was a homosexaul) you tried to black mail into
leaving RRAP then or yourd expose me as a homesexaul

that is outing someone in comon usage

>
> > <cut> proven then admitted yourself a lair,
> >
> > ok
>
> Sheesh.

Stevie you go on and on about something I don't deny

I do deny lying in particar cases, generaly whan you take one statement
add 3-4 things out of your own mind and then say I said it when I said
no such thing, therefore ...

>

yep

>
> And what are you for trying to impose YOUR "moral code"...?!?!

not trying to impose my moral code at all. I'd like to discuss radio in
a radio groups it isn't the place for Moral discussions

if you did not make an issue of my morality all the it would never come
up (unless Dave or someone else decides to take up your mantel)
>
> > > > of course how I am is normal for me part of the meaning of the word

it doesn't work all that well

>
> > and it would nothing to shut you up
>
> It would sure limit the number of times I have to query you about
> your fractured grammar and functionally illiterate spelling.

another lie

you NEVER have query me

you CHOOSE to

it would not stop you from going on and on about who I sleep with that
my moral code doesn't include what you think it should or the rest of
your personal attacks

It easier to do something other than what you want in this regard, it
offends (which is fine by me even a bonus) so why should I spend effort
doing something to please you (a person I'd rather see dead than
pleased) when I can offend (as I wish) with far less effort

you can call it lazy but I call it effiecent too

>
> > > But you don't.

> the NCI
> article.

Code won't help here, but testing for knowledge does.
As the FCC lets us build and maintain our transmitter,
we need to know a few things. Like:
Basic knowledge of oscillator and amplifier circuits,
and what happens if such are not designed or adjusted right
(harmonics and such problems). Technical stuff the CB "freebanders"
with "Linayers" should know but don't. Basic troubleshooting
skills (probable faults in given situations). Basic
circuit theory. Also block diagram level systems
(like the parts of a superheterodyne receiver). KNowledge
of RFI and probable causes. Repeater management. Bandwidth
of various modes (SSB, FM, etc) and why you don't set the
transceiver frequency at 14.349 in USB mode (your signal
will leak over the band edge into another service's band).
Rules and regs like IDing and no pecuniary interest (which
really protects our bands from business invaders). No
broadcasting (the web is a better medium for this anyway).

Enough knowledge to be tested so a candidate can be
trusted to operate transmitters and not screw up the
radio spectrum for other users.

## 516. more stveie shit

Whoa Bill, slow down before you pop something, take a deep breath and
relax. It's only ham radio and it's only USENET.

I fully agree, the code test game was over years ago.

Y'know, the only reason that we Canadians were able to keep Morse
testing around (as an option) was because our regulatory authority
agreed that it would be valuable for the purpose of reciprocity
agreements with countries that have decided (or will!) to keep Code
testing as a mandatory requirement for their Amateur licensees.

It's a valid point - without a Morse-qualified licence, one may not be
permitted to operate HF in a foreign country that requires Morse for
access should one choose to travel there. Reciprocity has always been
an important part of the worldwide Amateur community.....therefore, we
would have lost something tangible that we already had should this
scenario have played out!

It sure makes a non-emotional, fact-based arguement - which worked
quite well up here. I wonder, if enough people presented this
reasoning to the FCC in their comments, if they might be willing to
buy in to it?

Might be worth a try....?

It obviously didn't work did it. Not only is the total number of hams far greater today than then but as a percent of the population we are more numerous than then. It simply goes to prove that anyone who wanted to be a ham could.

Dave:

Well, there is debate and argument for good and reason, and then there is not...

Then there is religious devotion to a test which serves only a select few...

It would be interesting if the powers that be were to decide in keeping CW--and then explain why they alone in the world community made that decision, frankly, I would be happy not to have that task...

There are plentiful examples of insanity in this world... that old book which bears the title something like "The Emperor Wore No Clothes" is as meaningful today as the day it was written...

Steve, I have to disagree with you on the concept that only Morse tested operators be allowed to operate Morse. If the FCC is going to drop the code requirement (which seems certain now), the operators should be allowed the privileges of the comparable classes of today. Besides you don't have to be familiar with a mode to hear that someone is using the frequency and thus to know that you should go find another.

I've seen no one say that people will "flock to use it". However there is
reason to think that enough people will choose to use it to keep this as an
active mode.

> Then, they turn around and argue to keep the test, why? Because deep

I'd expect avid QRP enthusiasts and contesters to have quite a bit of
interest.

However, I agree that "Joe Average" may not pursue it unfortunately if not
required to learn a very minimal, basic level of performance. Due to all
the activities of those trying to eliminate the test, he may falsely believe
it to be beyond his abilities. We may end up with only the very elite
operators, i.e. those who learn easily and progress to lightning speeds.
The casual ragchewer (i.e. the person who operates at around 13wpm or so)
may find slim pickings.

Dee:

I think it more reflects the readily availability of manufactured equipment as compared to equip constructed by ones own hand.

I also think it has to do with an economy which allows one to support such hobbies, and the abundant free time individuals have to devote to such hobbies.

I also think it has to do with education and the masses do not find radio a "dark mystery" anymore, etc, etc...

It has to do with a lot of things... one I don't even consider is a factor which has helped the popularity of ham radio is CW... indeed, it has served as a hindrance... only the degree which it has hindered is left to be argued, in my humble opinion--and shortly we are due to find out... indeed, without some sort of "shot in the arm" amateur radio would continue its' course and go the way of the dodo bird...

Yet that has not become an issue for any country yet. Indeed,
by the nature of agreements, it has not been an issue with CEPT
reciprocation even before WRC-2003 deleted morse as a requirement
for HF licensing.

But as of today, and I'll defer to you to provide an example,
I am unaware of the issue being raised in any request
by any ham for reciprocal licensing.

Cheers,
Bill K2UNK

From what I gather, Toadie is quite self-sufficient on that
score. He can feed himself.

When Hans proposed that in the brave new world of a No-Code HF License,
that one should have to take a Morse Code Test to use CW, Jim/N2EY said
that a Morse Code Test would be a -barrier- to Morse Code use. Hi!
It's always been a barrier.

There is no longer any need to keep repeating the false mantras that "ham
radio is dying" and "Morse code stops people from becoming hams" since the
FCC will be eliminating the code test.

Dee:

"Joe BelowAverage", "Joe SixPack", his bother-in-law "Joe Geriatric", his cousins, "Joe CW-ReligiousFreak", "Joe Control-Freak", etc are already amateurs... in amongst them are a few, currently active and current hardware techs (but not many these days)...

"Joe ComputerSavvy" will be working on other protocols for data xfer on HF... and running a computer wan on HF... probably actively petitioning for changes to allow such...

And, of course, we all expect "Joe ChickenBander" to be there... as much a BS'er as any you can now find on 160-80-75-and-on-up...

And, "Joe RepeaterUser" will probably continue to dwindle, repeaters pale the most when compared to the internet, their only possible use for local lan/wan...

I am hoping all radio will go digital audio packet (for all phone)--one freq can be used for multiple QSOs' at a time, with no interfearence between, no ear will be of use anymore (packets are decoded and sent though the sound card), the computer becomes the "shack gear"... and hams are forced to update... some are already playing with this in the Ghz...

Dee:

We are possibly talking about 300,000 hams in the us, that is NOT a large number for a good hobby... compare that to millions of bicyclists, millions of fishermen, millions of bowlers, etc, etc... perhaps skydivers are near that number, 300,000, but only because many of us are too damn smart and won't jump out of a plane with a large sized piece of ripstop nylon attached to us!

How you quote such dismal numbers in amateur radio as if they/it are something to be proud of does nothing but amaze me! As I have pointed out before, there are MAGNITUDES more illegal aliens here than hams!

Dee:

Those "false mantras" are what the FCC and world woke up to, and believed...

A course in logic should be given before one can use their amateur license!

Um, Bill. Do you *really* believe that because the majority of current comments are in favor of elimination of the test, that the majority of Hams are of the same opinion?

*Is* it a representative sample?

I agree with what you wrote. Resistance is now futile. Why should I waste my time commenting?

You win. Shouldn't you and Carl and Fred be working on your next effort?

I wonder how that argument will form? Without the Morse code as the
great "barrier", the argument will have to change quite a bit. Of course
I will wait excitedly for the next salvo in the requirement easing effort.

You purport to be an active radio amateur and you didn't even have a realistic idea of how many hams there are in the United States? Do you think the FCC and ARRL are in collusion and they've whipped up some massive coverup of the number of licensees? Sheesh!

Dave Heil

Good grief!! So you can tell from listening to the bands how many hams there are. WOW!! Do you think all 600,000+ licensed operators are on at the same time? Do you even think all 600,000 are active on the bands? Which bands to you tune? Do you think you can hear all the stations that are on 40 meters? Do you think you can hear all the stations that are on 20, 15, 10 meters at any one time? Can you hear all the 2 meter, 440, and other UHF activity going on all over the country?
Do you think?

As of July 31, 2005

Novice - 27,975 (-43.28%) (-21,354)
Tech/+ - 317,655 (-5.02%) (-16,800)
General - 136,435 (+20.81%) (+23,490)
Advanced - 75,812 (-24.28%) (-24,236)
Extra - 106,900 (+35.74%) (+28,150)

Total All Classes - 664,040

Dave:

Anyone with a computer can grab the statistics off the FCC and arrl sites,
who is left which trusts them, if you, don't include me.

No, I was born at different time, when you got real data, real numbers,
real people to stand behind it, I understand the youngsters might be
confused by all this, but all us old timers have a real past when
everything was different. We have a bit more "history" to go by....

I guess you can just chuck me into the "conspiracy nuts" group, I don't
trust the figure, politicians, and news anymore... if I have to
appoligize for it, so be it... but don't consider it a half-felt one...

Frankly, I like progress, don't much care for liars and "spin doctors."

Dee:

Nope, never have seen all the bandwidths in as much use as back during the 70's and early 80's, did you have a ticket back then? My gawd, those oldtimers have forgotten what a real "pileup" means! Congestion worse than imagined in my worst nightmare!

Never have had interest in "contesting", much prefer just a gentle argument around stuff which "seems to matter"... never had a wall covered with QSL cards, only asked the ones who interested me, which I wanted to be reminded of, to correspond--hell, guess I am "not with it", but never have been, don't count one me now to "get with it." <lack-a-daisyial-grin-and-a-wink>... that "different drummer" has always caught my attention, started listening as a youth, never quit...

I have never been afraid to be different, if there is just one of me--so be it!

Dave:

Why ever bother to "reform" offenders? Why ever bother to restore them to society? Why ever bother to think what works?

Why not just alienate 'em, make 'em frankensteins, find fault, abuse 'em like we see fit? Create real monsters who harm us and society?

Are you for real? Do you have a purpose in mind?

Is you intent to find an offender and hold him there forever?

What happens when you create an army of 'em, and they end up harming your friends and family? You going to tell the harmed ones how much you are going to "punish the bad guys" you created?

Gawd man, I hope no fools give you power!

Mike:

Like, what size soldering iron would you need to replace most SMC components? Or, what card would you replace in your receiver if the audio goes out? Or, if you are going to operate a webcam what card supplies the video to the monitor? Or, what card in your computer supplies the audio to the xmitter card? Etc... I mean get real, radio is about to become PCI and USB cards you add to you computer. I still see linears (higher than say 20 watts) at external, and feedline and antennas are something an avg amateur will work with...

The one from the latest issue of the ARRL Letter? Todd should read it.
It tells of a fellow who had his amateur license set aside because of
unlicensed activity before he obtained his amateur license.

Dave K8MN

>>>>

Asking Todd to read the letter and thereby expecting him to understand it
are two, separate issues.
Comprehension seems to be not be not be viable insofar as Todd is concerned.

Mike:

Well YEAH! Take a video card from your computer, an audio card, a processor, a memory chip, a hard drive--then inquire of the cost of replacing it, as opposed to "repairing it?" One is possible, the other is NOT! (well, not by rational men!)

You think amateur radio is going to stay in the same archaic state as it has been held it to this date? Take the cover off of your computer, look at the circuitry, open your antique radio, look at the circuitry. Do you know why such a staggering difference exists? Because "millions" perhaps "billions" use computers, and not enough amateurs exist to make it worthwhile to bring this advanced technology to amateur radio. I mean, don't embarrass both of us with a detailed description of how vast the void is between modern technology and amateurs!

If you can't embrace progress, at least be man enough to step aside and let others make it happen...

ago, after WRC 2003 ended the treaty requirement?

> > 2. Thousands of comments were filed with various
> > rationals in support of code testing....the FCC
> > in their R&O reviewed and dismissed every
> > pro-code test argument....

Yup. But again, why didn't FCC simply dump Element 1 two years ago,
after WRC 2003 ended the treaty requirement?

Note also that the majority of those who commented back then not only
wanted code testing, but wanted at least two speeeds of code testing.
FCC ignored the majority.
>
> They also think that BPL is the best thing since sliced bread.

Yes, FCC seems to think that, despite all the evidence to the
contrary.
>
> > 3. The ONLY reason the FCC kept even a 5wpm test

> > The FCC, now has an open comment period for
> > discussion of the proposed change.

The current NPRM *proposes* to dump Element 1. It also denies just
about everything else in the 18 proposals.

> > 6. Unless some great new and profound reason to

> > out since they failed in 98-143, WRC-2003, etc.

Is there any chance that *any* pro-code-test discussion will
have *any* effect on the outcome?

Suppose - just suppose - that after all the comments are in, the
majority of commenters support at least some code testing. Will FCC
change their position?
>
> > 7. Any argument or claim that the code test should be

> > running better than 2 to 1 in favor of total
> > elimination of code testing.

The first reason is clear.

The second is simply what's happening now. Weeks to go yet.

And if the first is true, the majority is irrelevant,isn't it?

> Um, Bill. Do you *really* believe that because the majority of current
> comments are in favor of elimination of the test, that the majority of
> Hams are of the same opinion?
>
> *Is* it a representative sample?

Does that matter?

> I agree with what you wrote. Resistance is now futile.
> Why should I waste my time commenting?

Because if the majority supports elimination, FCC will say
'we just gave you what the majority wanted'.

> You win. Shouldn't you and Carl and Fred be working on your
> next effort?
>
I don't think NCI, Bill or Carl have a "next effort". When Element 1
goes away, they're done.

Fred is a very different issue.

Watch what happens in the next few years. Element 1 will most probably
go away, regardless of commentary.

There will be a flurry of upgrades to General and Extra, and a
flurry of new licenses.

Then the license numbers will go back to about where they were
before all the changes.

And folks like Fred will resurrect the "Communicator" idea
again, and push for reducing the written tests yet again.

# 592. Re: N9OGL to comment on K1MAN RENEWAL

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-06 11:52:09 UTC
From: N9OGL <toddaug555@yahoo.com>
Message-ID: <1123329129.688765.17800@f14g2000cwb.googlegroups.com>
Source record: 114942
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Some of the points to my petition:

1. This petition is neither for nor against K1MAN renewal, instead it is being sent to the commission for the purpose of the FCC to answer a few questions. These question mostly circle around the recent NAL given to K1MAN.

2. INTERFERENCE: The question of why the FCC seems to be going only after K1MAN when W1AW has also been reported to have cause interference. It seems funny that since 1987 the FCC has repeatedly sent warning letters and NAL's to K1MAN and not W1AW, who has been reported to begin transmitting over ongoing communications. It is also rather funny that amateur's, even the ones that W1AW has transmitted over, seem to target only K1MAN.

3. PECUNIARY INTEREST: Amateur radio is a non-commercial service and according to the rules and regulations amateur radio stations cannot have pecuniary interest either direct or indirect. The first of the questions is why does the FCC have a double standard or definition to the term non-commercial? Non-commercial under the general rule is a station that can't make a profit; instead a station can make money, to sustain the station. Non-commercial FM and AM radio station due it through viewer support and non-commercial point to point services do it through state and federal funds ALL other service are able to get funds to run their stations either commercial and non-commercial. The second is direct or indirect rule. K1MAN on his Information bulletin advertised his website which had commercial goods on it (DIRECT) while when some one listens to W1AW, like a short-wave listener, or a future ham operator they would get on the Internet and do a search for W1AW, which in term would lead them to the ARRL site, site, which also has goods for sale (INDIRECT). So the question is why is the FCC going after the ARRL for their indirect sale of goods? It seems that the FCC has a double standard when it comes to who can bend the rules and who can't. Which leads to the finally question, Does announcing your website on the radio (even if it to some guys your talking too) and it has commercial advertisement on it really constitute pecuniary interest? And again if so then why is the ARRL allowed to sale products on their website.

4. Broadcasting: Under the FCC rules governing amateur radio, ham operators are not allowed to broadcast, however under 97.3(a)(25) and 97.111(b)(6) amateur can run Information bulletins. The questions are where does the line between Information bulletin end and broadcasting begin? Many amateurs believe that an Information bulletin is to be a

newscast and is not allowed to opinionated. Which raises the second and third question, where in the amateur rules does it state an information bulletin cannot be opinionated? Third does these "non-opinionated rules" allowed under the "non-content based rules" (the Courts has ruled repeatedly that the FCC rules must be content-neutral) or Under Section 326 of the Communication Act of 1934 as amended, (prohibits the FCC from control the content of station except for obscene and indecent material) or the First Amendment

If I wanted to do you violence, Markie, it wouldn't matter if you
were across the street or across the country.

> > Yet here you are stirring the pot.
>
> showing what you were trying was blackmail

I never tried to "blackmail" you.

You need to whip out a legal dictionary and read what constitutes
"blackmail", Markie.

> > If I thought someone was a potential threat to myself or my family,
> > the LAST thing I'd do is get in their face!
>
> I choose to balcane the risks verus not alowing a terroist such as
> yourself to silence me

You choose to WHAT the risks...?!?!

And WHAT is a "terroist"...?!?!

> > The sum of it is that your own suggestion that you're in any danger
> > from me is ludicrous, as >>I<< have been saying for years.
>
> Not when you keep making threats

I haven't made any threats.

> you are a low level danger

So NOW you're saying you HAVE been lying about any danger to you
and your "family".

> terorists and balckmailer need to be resited when possible

"terorists" "balckmailer" "resited"

There's no terrorists or blackmailers here, Markie.

In your IMAGINATION maybe...but not in reality.

> > > > > It is you being stupid to even type that
> > > > >
> > > > > And it's even more idiotic for a putz like to you keep repeating it

> >
> you keep making threats of various sorts

Nope.

> threats to call a prosecuter for my lying online, threats to came to
> the UP where I live, threats against Todd, and Len and Brain

What threats?

> cuting stevie evasion

What evasion?

You keep making accusations that I ask you to substantiate.

You "substantiate" your claims by your OWN "evasion" in the form
of "cuting" the releveant questions.

> > > > > yes I would rather take a threat more seriously than t deserves than

> > >
> > > Stop what?
> >
> stop making new threats

WHAT new threats?

> stop harassing people

I'm not harrassing people.

You post, I respond. Period.

Sorry you don't like the comments, but then the comments I was
responding to were pretty stupid to start with, so what did you expect?

"First Ammendment", Markie...

> > You're the one with the honesty issues...said so yourslef on
> > numerous occassions.
> >
> > > stop making threats stopp harassing folks
> >
> > I'm doing neither.
>
> you keep doing it you lying SoS

Ahhhhhhhhhhhhhhh...here's the anger...Can't get your way so let's
go back to insinuating profanites....

> been doing it for years

Yes, you have. Time for you to stop it, isn't it?

> threats harrasment trying to intimadate people

Your "threats" to "sue" were never deemed even remotely plausible.

Your semi-literate dreck can be considered "harrassing" in it's
own way.

And people like you never "intimadate" anyone. Humor them,
sure...

You've rendered more than your fair share of laughs here!

Because you can never be certain that the ham will NOT
ever build anything. Additionally, all hams have technical
responsibility for their stations and the RF signals they
transmit.

>> Bottom line, there is no minimum code speed required
>> for anyone to use morse code as a ham. That is the

Not so. Part 97 gives reasons AND, the international treaty
still requires verification of knowledge. WRC-2003 eliminated
mandatory code knowledge...it did not end general knwoledge
of radio, etc.

> *Why* should there be any testing?

If you believe there shouldn't be any testing, then file
your comments with the FCC accordingly.

Cheers,
Bill K2UNK

Perhaps not - but the possibility of interfering with existing
reciprocity agrements was taken into account in their decision - a
quote from the Gazette Notice (the equivalent to the FCC R&O)
follows:

>>>>>>>

Notice No. DGRB-003-05 ï¿½ Revisions to Amateur Radio Operator
Requirements Relating to Morse code

>portion removed

Assessment of the RAC Proposal and Consultation

Prior to analyzing the elements of the RAC proposal, the Department
first assessed the validity of the following three factors presented

by the RAC as fundamental arguments:

There must be an awareness of the impact of this action (i.e.
elimination of the Morse code requirements) upon existing reciprocal
agreements and other arrangements which permit Canadian radio amateurs
to operate in other countries and foreign radio amateurs to operate in
Canada.

The Morse code examination must continue to be available in Canada for
the benefit of radio amateurs who may require such a qualification for
operation in another country, and for those who wish to acquire skill
in the use of Morse code.

Operation in the HF bands requires special knowledge and skills not
necessary for most operations in the bands above 30 MHz. This
difference should be reflected in the examination arrangements.
Industry Canada has accepted the validity of these three factors, and
consequently, they were taken as the basis from which the specific
recommendations were assessed.

.....etc

>>>>>>>>

The first two facctors listed are what I referre to in my original
post.

>
>> Reciprocity has always been
>> an important part of the worldwide Amateur community.....therefore, we
>> would have lost something tangible that we already had should this

>But as of today, and I'll defer to you to provide an example,
>I am unaware of the issue being raised in any request
>by any ham for reciprocal licensing.

Neither am I - however, the Canadian government was concerned that it
may become an issue in future - concerned enough that Morse testing
remains as an option here today!

Ain't politics grand! :)

Dee, the FCC did listen to their comments via NPRM 98-143.
The FCC then gave written reasons why their arguments for code
testing were not sufficient to retain code testing when the
R&O was issued from 98-143.

You state..."they are ready tom move on." That's fine and
we can therefore view those folks willing to move on
as agreeable to the 05-235 changes proposed by virtue
of their silence.

Cheers,
Bill K2UNK

> comments are in favor of elimination of the test, that the majority of
> Hams are of the same opinion?

Yes I do. Some 10 years ago the ARRL conducted a survey
of asking about code retention and the results then were pretty
close. With 10 years now passed, lots of new hams, many older hams
now SK, the results today would, I believe, show a majority
in favor of ending code testing.

> *Is* it a representative sample?

Is the vote for president of the USA a representative sample?
Bottom line, you get a chance to comment and that's it. FCC
rules, ultimatly are not determined by majority voting via the
comment phase.

> I agree with what you wrote. Resistance is now futile. Why should I waste
> my time commenting?

I'm not here to convince you to comment or
not. Your choice, your opportuity to speak.

> You win. Shouldn't you and Carl and Fred be working on your next effort?

Can't speak for Fred and Carl, but my next effort...actually my
continuing effort...is to support amateur radio as Local Gov't
Liason (LGL) within the ARRL field org.

Cheers,
Bill K2UNK

> think the FCC and ARRL are in collusion and they've whipped up some
> massive coverup of the number of licensees? Sheesh!

This approach has been in evidence early on. Facts are of secondary importance to opinion.

If we are told that there are not the number of hams claimed on the database, then that is the truth. If that means that the FCC is lying, that is the truth.

If we are told that the only thing needed to go digital on HF is to hook up that 56K modem to the rig, then that is the truth.

If we are told that Ham radio is dying, then that is true.

You can't argue with someone who makes up the facts as they go along, so why do it?

- Mike KB3EIA -

BTW, CQ has an article on HF digital transmission. Seems that they have got it all wrong too. They have a method that works, but it is pretty slow for images (or files) of any appreciable size.

Jim might note that they do some bandwidth tricks in similar manner as he proposed per our conversation in here earlier. Not exact, but along the same lines
Hopefully we will see an article from those who know the right way to HF digital soon. 8^)

> change their position?

I believe that the way the argument is framed is critical. It seems
that the argument has been put forth about getting rid of a regulation.
And we all "know" that regulation is a bad thing. Element 1 goes away. I
consider the odds of it staying are about the same as a singularity
popping up.

> Because if the majority supports elimination, FCC will say
> 'we just gave you what the majority wanted'.

Seems like more of that faith based stuff to me.

More correct would be "We are just enforcing what the majority of those
who chose to comment wanted.

And finally, *Who cares* what they would say? It is what they are going
to do, and to even give the commenters any idea that they have had any
say in something that has already been decided is dishonest on some level.

I still keep trying to engage someone in a friendly wager on that one!
Say a six pack of Black and Tan that NCI will morph into an organization
that promotes increases in the numbers of Hams by relaxation of the
testing requirements?

> Fred is a very different issue.

Hehe.

> Watch what happens in the next few years. Element 1 will most probably
> go away, regardless of commentary.

Correct.

> There will be a flurry of upgrades to General and Extra, and a
> flurry of new licenses.

Also correct

> Then the license numbers will go back to about where they were
> before all the changes.

History shows this is likely.

> And folks like Fred will resurrect the "Communicator" idea
> again, and push for reducing the written tests yet again.

Yes. We only differ in that one detail about NCI.

I'm firmly convinced that many of the people that think of Element 1 as the "great barrier" will be dismayed when they find out that there are other barriers to Amateur radio. Putting together a station is probably harder for most people than learning Morse code. Putting together a *good* station is definitely so.

What libel?

I quoted Lennie's comments word-for-word, Markie...Go read them yourself.

Furthermore, Lennie has, on numerous occassions in this forum, stated that he has no intention of getting an Amateur Radio license, yet he says just the opposite to the FCC in his opening comments.

So one way or the other he lied. Again.

So again I ask you..."what libel"...?!?!

Steve, K4YZ

Steve, you might want to end a direct quote with quotation marks so
that we can separate Len's comments from your rantings.

In any event, Len is correct.

> Of course his comments were laced with the usual amount of
> "mythology", "tribal" and other insulting inferences that we have
> become used to here.

Mythology??? Did he mention seven hostile actions?

> The biggest lie being his suggestion on page 1 that he was a
> potential Amateur Radio licensee.

Or being "A" NCOIC of a MARS station in Okinawa.

Did he say that "MARS >>>IS<<< Amateur Radio!" ?

> Too bad there's not a method for filing charges of perjury on
> filings.
>
> Steve, K4YZ

You could always start proceedings to impeach Len. Do you still have
the dress?

That's not what I said, Dee...

I said that non-Morse tested licesees shouldn't be allowed to
operate in areas where voice modes are not permitted.

There is a difference.

> If the FCC is going to drop the code
> requirement (which seems certain now), the operators should be allowed the
> privileges of the comparable classes of today. Besides you don't have to be
> familiar with a mode to hear that someone is using the frequency and thus to
> know that you should go find another.

But you need to be able to be able to inquire as to the use of the
frequency, etc. Just because I tune to 14.0xxMhz and not hear anything
for a minute or so does NOT mean the frequency isn't being used.

If they elect to go Code/Extra-NoCode/General, then we should
consider some band plan allowances to give the NCG's a place to
practice away from the skilled users. However that can be done on a
"Gentleperson's Agreement" (notice the PC there...?!?!?!) , not a new
"Novice" class license.

I agree with you, but you won't get very far with Jim.

I especially liked the bit about using a code reader as a handicap accomodation for the Morse test! I am a VE and never thought of that! Can you imagine if we had tried to get that past the ARRL VEC - they would have flipped for sure, but I think it may well meet the rules.

It's all academic now, or will be soon. The NPRM abolishes the code test, and the R&O will do the same. The pro-code test side have lost the war. Roll on VC Day (Victory over the Code Day, LOL!).

73 de Alun, N3KIP

(A 20wpm Extra who wasted years learning Morse code that I will probably never use)

it is mading a demand for gain for a target under threat

your actions quailify

you continue to black mail me

>

liar

"one shot one kill..." Is a threat

Threating to speak to Todds folks is a threat

>
> > you are a low level danger
>
> So NOW you're saying you HAVE been lying about any danger to you
> and your "family".

nope I am saying you have prooven you mostly make threats without
backing em up\

Wether od not you ever had any intention on caring out your threats has
nothing to do your making them

You simply make Idles(so far) threats, but you make threats often

>
> > terorists and balckmailer need to be resited when possible

never made one

I have pointed that you are vulernable to one, never threatened to do
it you have got anything worth talking

and of plausible to whom? You well that is more than likely right, a
real crout that is another matter

>
> Your semi-literate dreck can be considered "harrassing" in it's

Len, I think, although I am not 100% sure, that the ARRL already does do Morse proficiency certificates, or maybe I am mixed up and it is only the RSGB that does that?

I have noticed that a lot of the PCTA don't actually operate CW (present company excepted). There are a lot of people who take the view that they had to do it, so others should have to. Naturally, that group aren't much interested in CW certificates, 'cos they probably wouldn't be able to get one!

I was curious and found:

http://www.thedrinksgroup.co.uk/index.html

There is no indication that they make any "yiddish" wine

"one shot one kill.. is a threat you made it so by the aove statement
you are a liar

>
> > you are a low level danger
>
> So NOW you're saying you HAVE been lying about any danger to you
> and your "family".

no merely adknowing that you porven yourself a maker of idle threats,
just a school yard bully, moderately dangerous but I can handle that

that you take a state saying "you are a low level danger" and twist it
into So NOW you're saying you HAVE been lying about any danger to you
and your "family"." is truely amazing

but for the beifit of people you may bedazzled with your bullshit,
(truely bullshit is the politest term for what you do Stevie)

I took you for a major threat then, now I see you a minor bully

wether you ever intended harm to me or were just Bluffing doesn't
matter

you threatened

I took such measures then as I saw fit and i take such measures NOW as
I see , that my threat assess ment of you has changed not with standing

you nonsense that you had no intention of carring out your threats
does not alter the fact that ANY ressonable person may consider the
phrase "one shot, One kill, even in ILLIOPOLIS" a threat when directed
at a person living in that town

that I don't see you as much danger today and therefore It is safe
enough today to simply volley back at you does not alter the facts you
fraidten me and my family is action those years ago

you are a terrorist

No I am not agreeable to the change but I would rather spend time elmering people than composing a comment on it. To do the type of job that I would want to do is time consuming. Of course I could just comment that I am against it and let it go at that but I think that one should state why they think the change should not go through.

proves nothing the sort

the use of the word "proof" is this Newsgroup is shocking (and some
folks complain my use of words is bad i just mispell them rather than
male there meaning)

without consideing the population growth rates when certain changes
were made you can't tell where wed be IF say the FCC (and the US) had
screew the s25 and reducing testing to "---...---" and saying if you
can rudersatnd that means distress you have passed a code test (which
would have met the letter of the treaty) how many ham would swould
there today?

I don't know but a lot more I think, I can't prove it, or course but I
don't use the word "proof" so litely

right (where are the men in white suits?) Indeed I'd hope it is being used somewhere (but that might to too hopeful on my part) but it enough to make it a good bet that freq is not in use where this operator is working from, which is all that matters

If as I am sure happens the poor fellows keys up sending RTTY or PSK31 and steps on one he could not hear then that is of course too bad, but if he could not hear them he could not hear them, testing him for morse code first will not improve his hearing

OH, u mean Mogan David??? makers of MD 20/20, which is a non vintage, non Kosher wine..bottled after sitting in vats for all of 60 minutes

What was that old commercial, we shall not bottle our wine before it's time...what time is it now??

Still, no indication of a "yiddish" wine..a kosher wine maybe, yiddish no and certainly not a "bum" wine

sadly I fear you are right, and Jim is the most reasonable of the
devoted Procoders

but the target (mine anyway YMMV) is more moderate lurker in the NG
anyway no matter who one is addressing directly

I do have some (dwidnling fast) hope that prehaps some of the procoders
can be presauded to accept the new folks without basshing em over the
head over how they are unworthy not having done....

the fact that the ARRL hasn't tired another poll now suggests they at
least are far from sure that Code testing is majority position ( of
course they could simply feel it is a done and not worth fighting)

Indeed I supect that even at this late hour someone were to come up
with a realy good reason esp one the FCC had not heard they might
relent, at least awhile to consider it

Yes I do see the difference. May I suggest clarifying that in your
comments. i.e. They can operate code in the areas they have voice
privileges but that there be an "exclusive" section for those who are code
tested.

>> If the FCC is going to drop the code

>

Technically we have the same problem today in some modes. If I want to operate on a "RTTY frequency" with some other mode (although I wouldn't do so), I cannot currently use RTTY to ask if the frequency is in use.

Besides, if they are going to try to operate code, they will have studied it some and it won't be a major issue although it will happen now and then. In addition, the way for them to get better is to have the chance to communicate with the experienced.

I do NOT like the "Politically Correct" results of butchering the language. People are putting the em-PHA-sis on the wrong syl-LA-ble. If one studies the development of the English language, the term and suffix "man" originally simply meant human being. Females were "women" and males were "wermen". Instead of butchering the language perhaps we should resurrect the male prefix "wer-"?

Mike:

As usual, you got everything backwards... digital is not analog, end of story.

The modem on the mic just points out hams are too lazy, or two limited to even be able to kludge a simple digital project together, when the parts are just laying around. Hell, you have to use such stuff, real digital equip is few are far between and there are so few hams the call for such equip is almost non-existant, and that is sure not much motivation for manufacturers to build any!

Your arguments are lame, you are confused, you are just pissed that some real numbers are going to come to amateur radio. You know the old brass pounders are going to be setting out there chatting with the fewer and fewer of themselves which survive each and every new coming year, time is their enemy and the hope of progress...

Yes the ARRL does do Morse proficiency certificates. However they are sought only for personal satisfaction and have no connection to licensing. I have them for 10wpm and 15wpm. When I took my 5wpm and 13wpm license tests, I was dissatisfied with my copy. Even though I successfully managed to answer the required 7 out of 10 questions, I had nowhere near solid copy. So I undertook to earn the certificates simply to satisfy myself that I could get solid copy. Although my 20wpm license test also lacked solid copy, I wasn't as dissatisfied so did not seek the higher level certificates. However, now that I'm into CW contesting a bit, I may go for the higher ones as a goal to help me up my code speed.

however, we can greatly simplify the testing process and regulatory
burden by not allowing hams to build anything. I believe that there are
examples of this already in some countries.

Cannot Part 97 be changed to simplify the process and ease the burden
and eliminate the barriers?

> AND, the international treaty
> still requires verification of knowledge. WRC-2003 eliminated
> mandatory code knowledge...it did not end general knwoledge
> of radio, etc.

There are ways around that. I believe that many countries, including
ours have worked their way around the rules.

I believe all it would take is issuance of a booklet, and a signed
affidavit that the prospective ham has read and understood it. This
would be akin to the old Morse sending test elimination.

>
>>*Why* should there be any testing?
>
>
> If you believe there shouldn't be any testing, then file

I do not, Bill. I personally think there isn't enough testing now,
Morse code issue aside. I think I'm on record as being accepting of
elimination of Element one if there is a corresponding increase in the
testing requirements. If not, I am now.

I raise these questions because there are some pretty powerful tools
available to people who feel otherwise.

Frankly, I would NOT be too worried about hams building anything, first they will have to know how... it may sound good, but as a early teen it took me many books and a few failed attempts to get those first complex circuits going... by the time they can build it and it works, they will darn sure be able to answer any necessary questions on how they did it!

Get real, teenagers would still be building this stuff today, if amateur radio had stayed current, but they lost 'em decades ago with the protectionist philosophy a few control freaks and spin doctors were able to hoist over on the unwitting...

I always thought Canadians were pretty smart folk! Then again, I
believe that they don't believe in faith based regulation.

> Operation in the HF bands requires special knowledge and skills not
> necessary for most operations in the bands above 30 MHz.

Kinda. If we can make Ham radio similar to CB, that is channelized
operation, (which will help with digital voice too) prohibitions on
homebrewing equipment, requirements for commercially built equipment
from antenna to rig, operations on HF need no special qualifications.

It is the law of untended consequences. Reciprocal licenses are an
issue. Probably isn't important to a lot of Hams, but that doesn't mean
it isn't important.

I'm surprised, Bill. If a scientifically structured poll was made, I would likely accept the results, whether I agreed with those results or not. The comments in this case are largely useless as for any thing representing the majority of amateurs.

You have a good thesis in your last paragraph, but that is your thesis, which you are willing to validate by an amazingly imprecise poll.

>
>>*Is* it a representative sample?
>
>
> Is the vote for president of the USA a representative sample?

When I go to the polls, I know that my vote is counted (barring shennagins!) and if I vote for the winner, my candidate wins, if I vote for the loser, my candidate doesn't.

posting any comment on this issue has no effect on the outcome. I know that, you know that, and I choose not to comment for that reason.

There are numerous archived quotes in which you say you were running a pirate radio station and a pirate TV station. The recent story in the ARRL Letter deals with an individual whose license was set aside for *previous* unlicensed activity.

Now, *little buddy*, see if you can see any similarity between that story and your own tales of pirate activity.

# 660. Re: Docket 05-235 Scorecard

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-06 20:15:57 UTC
From: LenAnderson@ieee.org
Message-ID: <1123359357.117170.257750@g47g2000cwa.googlegroups.com>
Source record: 114960

Today's Scorecard in the NCTA v. PCTA Amateur Championships!

As of the end of the week in DC on 5 Aug 05, WT Docket 05-235
Comments on Test Element 1 Elimination/Retention are:

Total 744
In-Between/Dupes 81*
Against Elimination 182
For Elimination 481

* In-betweeners are those "following" the ARRL plan to scrap code
testing for all but Extras, therefore with feetses in both camps.
In that group also are duplicate Comments or those commenting on
matters other than addressed in the NPRM. Those include one that
is obviously a "joke" entry.

Note: The DATE RECEIVED block on the ECFS Search Listings is
running on Eastern time zone and the calendar date for all
Comments is set accordingly.

To date, the average definite-opinion NCTA:PCTA ratio is 481:182
or 2.6:1 ratio. This excludes all 81 "in-betweener" Comments.

5 August 2005 is the 13th day of submitted commentaries. A notice
about FCC 05-143 or Docket WT 05-235 has NOT YET BEEN MADE in
the Federal Register so it is unknown if these 13 days of Comments
will be accepted by the Commission for decision on any Report and
Order. Stay tuned...the future of U.S. amateur radio is being
made, like it or not.

dit out

Tsk, tsk, the FCC did listen to the majority in 1990 and again
in 1998. One big problem with the Elite is that they don't
understand THEY are the MINORITY.

"Moving on?" [a fairly good one-hour TV show years ago...]

You have a choice: Move ON and go with the majority flow to
the future or keep on recreating the past, a past before your
life existance began. Your choice.

Better yet, "adapt or die." Remember what happened to the
dinosaurs...

>Len, I think, although I am not 100% sure, that the ARRL already does do
>Morse proficiency certificates, or maybe I am mixed up and it is only the
>RSGB that does that?

The League does or did, but that is irrelevant since the ARRL was
first organized in 1914. The year 1914 cannot possibly be
considered "new" by anyone, save for our resident Worshipper of
the Past, the redoubtable Nun of the Above. [the Radio Club of
America, still an organization, was formed 5 years prior in 1909]

I haven't noted what year the Radio Society of Great Britain was
formed other than the RSGB publishing EXCELLENT handbooks plus
having some excellent commentary by Pat Hawker in his very long-
running column in their membership magazine. In the past three
decades there has been MORE actual pioneering in radio by the
radio amateurs in the UK and Europe than in North America. Two
specific cases: The polyphase audio quadrature network permitting
generation/decoding of SSB without high-tolerance R-C components;

The innovation of Peter Martinez' (G3PLX) PSK31 and its trials in
the UK and Yurp well before that mode was published in the USA.

>I have noticed that a lot of the PCTA don't actually operate CW (present
>company excepted).

Actually, that would be irrelevant. WT Docket 05-235 affects ONLY
those who wish to ENTER U.S. amateur radio through licensing OR
those who want to "upgrade" to a "higher" class U.S. amateur radio
license. The ONLY effect on those U.S. radio amateurs ALREADY
licensed as amateur extras is EMOTIONAL.

The FCC is NOT chartered to act as an emotional sustenance
provider for whining crybabies who want to be Elitists in the
OLD way of doing the HOBBY of amateur radio.

> There are a lot of people who take the view that they
>had to do it, so others should have to. Naturally, that group aren't much
>interested in CW certificates, 'cos they probably wouldn't be able to get
>one!

No, no, Alun...these Mighty Macho Morsemen WILL absolutely pass
each and every morse code test ever devised/done/contemplated
and lots of them have implied that in here! :-)

>
>Did he say that "MARS >>>IS<<< Amateur Radio!" ?

Tsk, tsk, tsk. ANYONE is a POTENTIAL AMATEUR licensee. I've
been a COMMERCIAL licensee since 1956...and IN the HF comms
activity before AND after that year...AND working IN the
electronics industry of the southern California Aerospace
"community" from 1956 onwards...AND as a hobbyist in radio
and electronics since 1947 (non-transmitting electronics
and radio do NOT need any license).

As for ACTUAL, 24/7 HF communications, in the military, I
have that documented at:

http://kauko.hallikainen.org/history/equipment/

in three separate papers, each with illustrations from military
or personal sources.

The point in those was to show what Big Time HF Communications
WERE back a half century ago. There was NO manual or automatic
morse code mode employed in those big 24/7 communications networks
of the United States military way back then. None has been used
since for the vast majority of communications that have taken
place.

UNTRUE, Dee. The peak in license numbers happened a few
days longer than TWO YEARS AGO. The number of total U.S.
radio amateur licenses are now over 6 thousand LESS than
they were two years ago.

> It simply goes to prove that anyone who wanted to be a
>ham could.

Yes, Dee, and you too can become a concert violinist, an
artist-illustrator, a champion athlete, an intellectual
somebody IF YOU WORK REALLY REALLY HARD AT IT...plus one
tiny things: A physical aptitude ability to do that.

Great "Toddie". There's plenty of information that we already know from Google and various web sites. It is all in your very own words--all the brags and boasts along with all of your kindly words toward the FCC.

You can be sure that, when the stuff does start flying, you'll be standing directly in front of the impellers. You just don't know when to quit.

Well Dave if I didn't have to but up with you and your little
boyfriends bullying on here, things would probably be a little better.
Hey go whine to the FCC all I have to tell you and them is good luck in
the contest. As for my ISP hey do it and everyone on here and the
Internet will know what a total jerk you really are.

If code testing is good for people who just want to use voice modes, it
must be doubly good for those who want to use CW.

CW gets through when everything else does.

The IRS knows to better accuracy the amount of people
earning W2 income. If they wanted to and allowed to,
they could say that X% of people who paid taxes before
are now unemployed, some out of work for 2 years or more.
And how many people are earning less income than last
year.

Pretty soon I'll be paying income tax again. IE, found
a job commensurate with my education/skills. I start
in 2 weeks. Well, I guess President Bush made good
on his promise to cut my taxes, I paid zero last year.
Though I'd like to have some income....

>

Ham radio still has another major obstacle than the
code. Antenna restrictions. CCRs and such.

Only on the frequency I'm trying to snag that rare DX on.. :-)

But to a first order approximation the ratio of people
actually transmitting right now to the total number of
hams would be essentially constant.

not as I recall the only way you say that is take his statements of
context, which is nothing new for you

>
> So one way or the other he lied. Again.

only in your twisted mind
>
> So again I ask you..."what libel"...?!?!

accsuing someone of perjury in a document not even under oath is libel
stevie

Even if he is lying he can't comit perjury, he has to be under oath for
that

so you remarks are false on the face of them, and therefore you have no
defense against a chrage of libel for them
>
> Steve, K4YZ

Don't know about this newsgroup, but in math class "proofs"
were things that claimed to verify that some assertion was
in fact true. I never really figured out how proofs actually
worked or why I should care. As proofs never showed on tests.
All the "proof" I ever needed was that some process applied
to a test problem would yield a "correct" answer and I'd
get a decent grade.

"I tried but I'm just not able to learn the code." I heard it in the 1950's and I still hear it today. The global-standard copout which probably goes back to 1912.

> Putting together a station is probably
> harder for most people than learning Morse code. Putting together a
> *good* station is definitely so.

Agreed. The upcoming wave of nocode Extras and Generals will have to face and resolve the same age-old problems us 20wpm OFs have faced for decades when it comes to put up or shut up time as it relates to actually operating in the HF bands. Like being able to spend the money it takes to acquire decent HF equipment, having the ingenuity and knowledge needed to home-brew decent antennas for constricted spaces for instance, ditto solving QRN and RFI problems, etc. Those have always been far bigger HF show-stoppers than the code tests ever were and will continue to be so.

Those who want to get on HF badly enough will by one means or another. Those who can't be bothered with learning the code, spending the money, doing the learning and the physical work required to get on HF won't get on HF. In some huge percentage of cases those in this category are the same bunch who have been eagerly waiting for the code test "barrier" to completely disappear so that they can upgrade to HF tickets.

I expect that after the smoke and flames die down there won't be any noticeable differences in the HF bands between now and 2010 as result of eliminating the code tests. Which is where the rubber actually hits the road.

I'm sorry, did I get the attribute(s) wrong. I thought you, Brian, mentioned about the yiddish wine. The fact that Mogan David makes a cheap wine, and cheap is the operative word seems obtuse to the discussion you are having with the other people.

How that can be construed as a rescue attempt should be left for those that can actually see the writing between the lines

Again, if the attribute should be to Steve, my apologizes. I thought I had read them correctly.

The fact remains, there is no such thing as Yiddish wine. I have heard my grandmother, may she rest in peace, whine in yiddish though :-)

Have a topiary weekend

Jimmie! That's called "the Sin of Omission!" Ain't "lying."

The ARRL does that a LOT.

Of course, to you, the ARRL always tells the "truth" and all others
are "liars." [or, at least, a "form" of liars...]

Tsk, you've gone over to the Dark Side wherein Stebie dwells.

>Here's the whole story:
>
>I read that bit of W5YI propaganda, and also the original articles in

>(have you done so?)
>
>The referenced article does not give all the relevant facts.

True, the ARRL "history" omits a LOT of facts. According to
you, omitting facts is equivalent to LYING! Tsk, tsk.

>To get a clear picture of what was actually happening, it is important to
>understand what ham radio was like back in those days. After WW1, ham radio
>almost ceased to exist. It was brought back to life by the dedicated efforts
>of a few enthusiasts.

"Hiram Goes To Washington, Saves Ham Radio!" :-)

Hello? You've heard of the Radio Club of America? Formed in
1909 and still active.

Ever hear of Thomas H. White? He's got a very detailed lengthy
website on the History of Radio in the United States. Covers
Everything in radio.

>Amateur radio was not even recognized by international treaty until 1927. The
>1927 treaty resulted in stricter new rules and much-narrowed bands.

Did that disturb you at the time or were you indifferent to
your design of state-of-the-art ham radios?

There's more Real History of "treaty" matters at the ITU
(International Telecommunications Union) website. A UN body,
the ITU superseded the CCITT for international communications.

>By 1929 there were about 16,000 hams in the US. Almost
>all of them were on the 160, 80, 40, and 20 meter bands. A typical ham
>transmitter was a self-controlled power oscillator, and a typical ham receiver
>was a three tube regenerative. Sure, more advanced techniques existed, but few
>hams could afford them in thos Great Depression years.

Tell us all about the Great Depression, Jimmie. You were THERE,
right? Your Dad was unemployed during the Depression, right?

>Code skill was important in almost all radio services. 10 wpm was not
>considered as anything like professional level - 25 or 30 wpm was more
>like it. (This was with semiautomatic keys for sending and manual
>typewriters for highspeed copy).

You are familiar with "almost all radio services?" Tell us about
"Type C Carrier" that was the first modulation source of the first
SSB transmission contents, such as from Hilversum to the Netherlands
Antilles.

>But the Depression and the new regs had a surprising effect on ham radio. The
>number of hams took a sharp upturn in the early thirties. By 1935 there were
>over 46,000 hams - almost TRIPLING the number of just five years
>earlier! But the turnover in amateur radio was approaching 40% per year.

Tsk. You forgot a "minor" item...The Communications Act of 1934
and the newest U.S. radio regulating agency, the FCC. You can
read about that on the FCC's own webpage along with some historical
letters (some from FDR) concerning who should control what in
interstate and international communications (which includes radio).

Of course, if you wanted to read a LOT more on the Real History
of Electronics, you could hustle on down to a technical library
and peruse McGraw-Hill's ELECTRONICS magazine anniversary issue
of April 17, 1980.

In that ELECTRONICS issue you'll find a few facts such as the
public's identification with radio growing by leaps and bounds
now that AM broadcasting had become widespread. "Hams" really did
have OTHER forms of information input other than the ARRL...

>This meant that most hams were raw newcomers, with relatively little technical
>knowledge or operating skills. A ham with 5 years on the air was a
>veteran, one with 10 years was a grizzled old timer. Problems of
>interference and crowding abounded. Complaints from other services
>threatened the existence of ham radio.

Wow, sounds like Hams of the 20s and 30s were just like CBers!

>The problem was that thousands of newcomers were learning just enough to pass
>the tests, assembling simple stations with little understanding of proper
>design, adjustment, or operation, and putting them on the air. Many of these
>newcomers lost interest quickly, particularly when the limitations of their
>knowledge and skills became apparent.

Wow, sounds like the Hams of the 20s and 30s were now Just Like
the lowly underclass Technicians!!

> The newly formed FCC was concerned, as was the ARRL.

The FCC was "concerned?" Really? Big "fans" of Hams, were they?

Formed in 1934, the FCC was still getting its act together in those
early thirties and so was the rest of the federal government.
There's
LOTS MORE politics involved with ALL forms of communications at the
time, not JUST the simplistic involvement of radio amateurs.

>The action proposed by the ARRL to the FCC was in two parts: Raise the code
>speed SLIGHTLY, (10 to 12-1/2 wpm) and make the written test more
>comprehensive. The changes to the written tests are all but ignored by
>the NCI article.

Does WT Docket 05-235 concern itself with WRITTEN TESTS? NO!

>The goal was NOT to limit the total number of hams, nor to hinder or
>deter anyone from getting a license, but to control the flood of
>newcomers, and make sure that the new folks had the necessary skills
>and knowledge.

Crap! The ARRL was then LED by the morsemen and, through its profit
in publishing amateur-related periodicals and handbooks could afford
legal representation in DC to swing government decisions its way.
T.O.M. survived into the thirties and prior to that, as a virtual
president-for-life, had gathered around him fellow morsemen to
spread the "CW" word.

"CW" technology was simpler than AM and the publisher's editors
could understand the simpler stuff. The "advanced technology"
information out of Newington at the time was very basic stuff.
Ready-built amateur radio products weren't much
better...regenerative
receivers like the National Radio "Thrillbox!" (what a name!) and,
what few AM ham rigs existed used the brute-force audio power
amplifier to swing the final amp's plate supply. Wow! "high tech!"
The superheterodyne receiver was invented in 1918 and the Phase
Locked Loop in 1932...

>Look at the complete picture, and the action of the FCC in 1936 makes
>sense.

Looking at the COMPLETE PICTURE will only make a mockery of what the ARRL chooses to tell hams. COMPLETE, Jimmie, not the spoon-fed pap interspersed with self-congratulatory League praise of itself. Things have CHANGED now, Jimmie, and there's lots of free Real History available for everyone on the Internet. One very good place to start is:

http://earlyradiohistory.us

by Thomas H. White, a huge collection of information, many scans of documents covering early radio history from 1897 to 1926. It is not colored or spin-doctored as some membership organization's "histories" are for self-promotion purposes.

The History page of the FCC's own website has more. [FCC is not a membership organization]

>manufacturers to build any!

Witness the comments on a previous thread about the "Sienna,"
a new HF transceiver built around a PC-on-a-card. It is not
"real radio" to some of these MMMs so they decry it. However,
this small DZ outfit chose to remove its first kit from its
product line called the "PSKUBE." That one was essentially a
PC with built-in LCD screen display and detachable keyboard
designed expressly to work with PSK31 or any other common
TTY format...full HF receiver and QRP (sorta) transmitter.
Apparently the demand for the PSKUBE was so low that it would
not have been profitable for DZ to continue marketing it.

Actually, the converse exists today. There are Morse code only
segments of 6m and 2m, and no code techs could operate
there (using Morse code). So why not for CW segments of HF?

I can't find any real reason why there is any need for testing for
anything in Amateur radio any more.

That doesn't mean that I don't support testing. It means that Hams and
our regulatory bodies have to get together and form a consensus on just
what we *want* Amateur radio to be. Do we want it to be a body of people
with some form of technical knowledge? So be it. We can do that But we
can indeed turn the Amateur bands into something else indeed. We can
channelize them, we can eliminate experimentation, we can reduce maximum
power levels, and we can ensure that only type accepted equipment is
used. At that point, we can eliminate testing altogether.

Perhaps people should drive automobiles for a couple years before
getting their licenses?

I learned how to operate on HF by being Elmered by other hams. There
still are things to learn before getting on HF successfully and safely.

Of course, that could change if we change amateur radio into what some
people apparently desire.

: Isn't it funny how all artistic depictions/renderings of that
: faggot Jesus (who got what he deserved on the cross) and his
: followers in the Bible all have long hair?

Those are derived from artists depictions from the middle ages.
During that epoch, long hair like yours was common, and it was natural
for the artists to paint Jesus to look like themselves.

In actuality, it is highly probable that Jesus had short hair. Even
the History Channel has put on programming which points that out.
Your own lack of scholarship is clearly evident in the comments quoted
above.

Paul (or Saul) lived during Jesus' time and was intimately familiar
with the customs of the day. Long hair like yours was regarded as
effeminate by most male Roman citizens (Saul was a Roman citizen), and
hence the quote from one of Saul's letters to the Corinthians.

If Saul were alive today, he would probably say "If Woger posts his
photo on Yahoo, it is a shame unto him."

And he would be right.

Jesus came to establish the rules for the "new testament", many of the old rules were suspended... if Jesus had walked around with short hair, such as became the style this century, he would have had stood out like a sore thumb...

If you told the truth in stating your age, I'm about a year older. So
you weren't born at a differeent time. I'm still getting real data and
real numbers. I have no reason to doubt the numbers. Each radio
amateur has a published name and address. If you'd like to randomly
sample for accuracy, start writing to a number of them.

> I guess you can just chuck me into the "conspiracy nuts" group...

I'd already done so.

That probably accounts for the pseudonym.

> if I have to
> appoligize for it, so be it... but don't consider it a half-felt one...

A man should never have to apologize for being a conspiracy nut. It
marks him as a rugged individualist.

> Frankly, I like progress, don't much care for liars and "spin doctors."

If you don't pay attention to figures, politicians and the news, how do
you know we're making progress?

> than imagined in my worst nightmare!

It's a nice story. It is a pity that t'ain't true. I've run pileups spanning five to seven KHz for as long as six hours at a time, working 200-300 CW QSOs per hour. That happened as recently as 2000. DXing and contesting aren't games about twenty and thirty years ago, they're about what you've done lately. Contest scores have gotten bigger. The top scorers work more stations than were worked two or three decades ago. There are domestic scores now which top the world high scores of that many years ago.

HF will never be the place for high speed digital transmission. There
is too much noise and signals are subject to the vagaries of wave
propagation phenomena.

Dave:

Try to keep in the forefront of your mind that everyday which goes by sees another of the 60+ year olds dominating HF, suffer a stroke, succumb to alzheimers, suffer massive a heart attack, etc, etc... indeed, a quick scan and monitor of the bands discloses much, too much chit-chat on the medical element which is plaguing them...

The next five years are GOING to be devastating on this groups numbers...

You only need logic to read those tea leaves...

That's impossible. FISTS is non-political, and all things Morse Code
related are PURE! So that's impossible. Completely impossible.

Steve Adell is no Steven J. Robeson, though they may both be
connoisseurs of cheap, kosher wine.

"Anonymous" appears to be Robeson's feeble attempts at anonymity.

Steven J Robeson's postings are full of Yiddish perjoratives, and
"Anonymous" appears to have a familiarity with cheap, kosher wines.
That was the link that makes the connection from Anonymous to Steve.

> How that can be construed as a rescue attempt should be left for those
> that can actually see the writing between the lines

Steve requires some kind of rescue. I'm suprised they don't have in in
some kind of group sessions at work.

> Again, if the attribute should be to Steve, my apologizes. I thought I
> had read them correctly.

You read them correctly.

> The fact remains, there is no such thing as Yiddish wine.

Fair enough. Does the label actually claim "Mad Dog" or does is state
"MD?"

I have heard
> my grandmother, may she rest in peace, whine in yiddish though :-)
>
> Have a topiary weekend

I do need to get my ears lowered.

## 712. The Majority

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-07 01:41:23 UTC
From: N2EY@AOL.COM
Message-ID: <1123378883.260248.82590@g44g2000cwa.googlegroups.com>
Source record: 115011

Recently there have been some claims about "what the majority wants" in regards to FCC NPRMs.

Here's what happened wrt 98-143, the last big restructuring NPRM, and commenters' views on code testing.

http://groups-beta.google.com/group/rec.radio.amateur.policy/msg/bd661a50825a37f3?dmode=source&hl=en

http://tinyurl.com/7t3te

It was posted Mar 12 1999, by WA6VSE. Here's a relevant quote

BEGIN QUOTE:

Here's a summary of how the numbers came out ... more detail will be available from the NCI website soon ... special thanks to Larry Close

[Larry Klose, KC8EPO]

who put in a herculean effort to read EVERY record in the ECFS database and do a very comprehensive statistical analysis of the body of comment.

Code Exam Proposal Summary

Position Supported # %
No Code Comments 711 43% (favoring 5 wpm MAX or NO code test)
Pro-Code Comments 607 37% (status quo, including rants for faster code tests)
ARRL Comments 331 20% ("I support the ARRL proposal" or supporting 5/12/12)
---
TOTAL COMMENTS 1649 100%

END QUOTE

(the bit about "rants" is from the poster of the results, not KC8EPO)

Larry eliminated dupes and responses that did not address the code test issue.

It's clear that:

57% of those who commented on 98-143 wanted 2 or 3 code test speeds.

57% of those who commented on 98-143 wanted 12, 13 or 20 wpm for Extra.

57% of those who commented on 98-143 wanted 12 or 13 wpm for Advanced.

80% of those who commented on 98-143 wanted 5 wpm for General

But only 43% of those who commented on 98-143 wanted 5 wpm or less code testing.

57% is a clear majority, but FCC ignored it and went to 5 wpm for all license classes requiring a code test.

For the record, I supported 5 wpm for General, 12 or 13 wpm for Advanced, and 20 wpm for Extra.

73 de Jim, N2EY

Lucifer:

You old hot devil you, the women have been asking around for you!

Really don't know huh?

He changed "an eye for an eye" to "turn the other cheek"...

He changed not being able to eat pork to now being able to eat it...
(someone needs to sneak some ham in the muslims food! They don't know
and haven't tried it yet... <grin>)

... jews are still pi$$ed off about a lot of it, don't recognize Jesus as
the messiah, some will grant he bears prophet status...

... but then, much of this doesn't have to do with amateur policy,
although it can't hurt to have a catholic priest bless your rig and
antenna!

one the basic you basic premise is in error

The rules MUST reflect what is in the interest of the PUBLIC, these are
a subset of the PUBLIC airwaves

Public regulation must reflect public interests

IYO

Morse code USE is no barrair at all, hasn't been in years

testing is of course a barriar

and it is the Biggest one

I have read article in QST on operating with crumy antennas (I remeber
an article focusing on that)

then you rattle off a list of "Barriars" that don't exist in many tech
shacks
>

Bullshit I have set up on HF on FD operating on battery with no help at
all and manged fine

BTW I suggest that myself ifone has the choice planing on you first
major operating being FD or something like that where you will KNOW
someone is on the Air

Translation: "Whahhh, whahhh...the FCC is taking away Test
Element 1 which I passed so make them take away the other
three Test Elements which I passed!"

Jay-suss, Coslo, you are one mean and spiteful mumbler...

Michael, WT Docket 05-235 is ONLY about Test Element 1.

> That doesn't mean that I don't support testing. It means that Hams and
>our regulatory bodies have to get together and form a consensus on just
>what we *want* Amateur radio to be.

"Consensus?!?"

BWAAAAAAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

If there was a "consensus" POSSIBLE, there wouldn't have been
EIGHTEEN PETITIONS, all different, on a "new" amateur radio in
the USA!

What you (and most MMMs) "want" seems to be a fantasy idea of
some kind of "radio expertise" allowed to use on certificates,
after your name, and rationalization for all your posturing
and elitist posings. A fantasyland where all can tell of their
mighty amateur exploits, of "fish stories" of "catching the rare
one," and strutting around like the cure for the common
terrorist for "Homeland Security."

BWAAAAAAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

> Do we want it to be a body of people
>with some form of technical knowledge? So be it. We can do that But we

>can indeed turn the Amateur bands into something else indeed. We can
>channelize them, we can eliminate experimentation, we can reduce maximum
>power levels, and we can ensure that only type accepted equipment is
>used. At that point, we can eliminate testing altogether.

More translation: "Whaaaah, whaaaah, I took a morse test and
passed and that makes me Very Technical Knowledgeable and those
who don't or can't are 'dumbed down!' Waaaa, waaaa..."

Tsk, tsk, tsk. WT Docket 05-235 and any subsequent R&O based
on that is NOT GOING TO CHANGE THE CONTENTS OF 97.1 in Title
47 C.F.R. In case you've forgotten, that's the DEFINITION of
"amateur radio" from the FCC, the agency that regulates amateur
radio.

You MAY be talking about the ARRL's idea of "what amateur radio
is all about" which seems to center around "working DX on HF with
CW." or "working CW contacts on HF for an 'official' (ARRL)
contest."

Does WT Docket 05-235 TAKE AWAY EXPERIMENTATION? NO.

Does WT Docket 05-235 MANDATE TYPE-ACCEPTED EQUIPMENT? NO.

Does WT Docket 05-235 MAKE ALL THE BANDS "CHANNELIZED?" NO.

Does WT Docket 05-235 MANDATE NEW RF OUT POWER LEVELS? NO.

>>>>Putting together a station is probably
>>>>harder for most people than learning Morse code. Putting together a
>>>>*good* station is definitely so.

Wow, "really HARD!" Walk into an HRO holding a little plastic
card and point to what you want on display, saying "I want
that." Ask for an antenna to put up and select from a large
variety of them for ANY ham band. Swipe the card in their reader
and Voila! it is YOURS. Take home the boxes, open them up,
READ THE INSTRUCTIONS PACKED IN EACH BOX, and install.

Whether or not that will be a "good" station depends on the
balance in your card's account, how glorious a review it got
in QST, and whether or not you bothered to read the install
instructions.

>>>Agreed. The upcoming wave of nocode Extras and Generals will have to
>>>face and resolve the same age-old problems us 20wpm OFs have faced for
>>>decades when it comes to put up or shut up time as it relates to
>>>actually operating in the HF bands. Like being able to spend the money
>>>it takes to acquire decent HF equipment, having the ingenuity and
>
>> already got a decent rig, and one since it has VHF and UHF abilities I
>> have been the air for years with
>
> Think about other people.

Tsk, tsk. THINK ABOUT OTHER PEOPLE, yes. THINK ABOUT THE THREE
OTHERS BESIDES YOURSELF THAT >>DO NOT WANT THAT CODE TEST<<!!!

Coslo, the average NCTA v. PCTA ratio is hovering around 3:1.
It varies from day to day, but the virtual "poll" in the Comments
to WT Docket 05-235 make it GREATER than 2:1. You are only
thinking of YOURSELF and winning message points in here...

> Perhaps people should drive automobiles for a couple years before
>getting their licenses?

Oh, my, the "LICENSE" thing again! :-)

Tsk, tsk, good old reducto ad absurdum technique.

I learned to OPERATE as well as maintain HIGH-POWER HF Transmitters
a half century ago WITHOUT ANY "LICENSE" WHATSOEVER and WITHOUT
HAVING TO KNOW OR USE MORSE CODE.

Those RADIO OWNERS AND OPERATORS using Part 95 radios "need
licenses?"

> I learned how to operate on HF by being Elmered by other hams. There
>still are things to learn before getting on HF successfully and safely.

I recall only a few days of "on the job training" in the Army
with "elmering" (not yet in vogue as a term in ham radio then)
being simply "do <this>, do <that>, dip the plate and peak the
grid, do NOT hold onto <this> when in standby because it will
KILL you." BFD. All the rest was PROCEDURE, how the frequency
got checked, what the TTY order-wire stuff meant, regulations,
and lots of specific other things. It was NOT "rocket science"
and AMATEUR radio IS NOT A JOB.

Repeat: AMATEUR RADIO IS NOT A >>JOB<<. If you screw up operating
your own hobby radio, you will NOT BE FIRED and nobody will DOCK
YOUR PAY.

> Of course, that could change if we change amateur radio into what some
>people apparently desire.

Third translation: "Waaaa, waaaa, them damn no-coders are gonna
take away the FANTASY I bought into...me, a big time national asset
to homeland security and a 'serviceman' in the service of the
nation!"

Jay-suss, the Mighty Macho Morseman won't be "banned," the "bands"
(a colloquial hamname for HF) won't change, and extras will NOT
be forced to retest!

Elimination of Test Element 1 will do ONLY ONE thing: FREE
newcomers and "upgraders" of having to take a morse code cognition
test. Nothing more. YOU won't have to give up a thing...except
your fantasies pounded into your brain by the fearsome gods of
all morsemen working in Newington. You won't even be

excommunicated from the Church of St. Hiram!

boo his

>> ago, after WRC 2003 ended the treaty requirement?
>
> Institutional inertia.

INCORRECT.

1. The LAW (try the Communications Act of 1934 for starters)
doesn't work that way.

2. The FCC could legally do it just the same but would face
later LAW in the Courts from all the outraged membership
organizations, enough to delay everything for years more.

3. The ARRL lobbyists (both the law firm and the lobbying
firm) were dead set against the FCC doing anything without
"the League's Permission."

>> Is there any chance that *any* pro-code-test discussion will

>proper poll. I expect better out of Bill.

Wow! You WHINE-tipplers better not drive anywhere...you are DUI.

Tsk, is your definition of "representative sample" equivalent to
WHAT YOU BELIEVE IN?

Silly question, of course it is!

Now, if the ARRL had conducted a "poll," it would be absolutely,
positively, peachy-keen ACCURATE...even if the poll respondents
were League members and good, God-fearing Morsemen of high rate!

BWAAAAAAAHAHAHAHAHA!!!!!!!!!!!!!!!!!!!!

Source record: 115019

From: John Smith on Aug 6, 3:36 pm

>b.b.:
>
>Trust me, the internet gets through when CW will not...

Yes, yes, John, it is useful for arranging skeds, holding rag-chews,
but the Internet NEEDS a personal computer! All the Mighty Macho
Morsemen know the "computer" is evil, high-tech bafflegab, and
THREATENS the Wetware modems now "in the service of the nation"
helping Homeland Security against wily terrorists out to destroy
their 1930s fantasy of hamme raddio and morsemanship.

Ahem..."CW gets through when nothing else will" is a hoary old
maxim (probably originating in Newington) that has been around
since the 1930s...back at a time when Claude Shannon had not
shown the radio world his marvelous Law relating bandwidth,
noise, error rate, and information throughput...back at a time
when there were only two modes in most of ham radio: CW and
old-fashioned AM voice. That "morse myth" has been engraved
on the concrete minds of hams seemingly forever.

At one time in here there was a pandemic epidemic of that
hoary hairy old morse myth over-quoted in here by the MMMs
of the deus ex machina mindset. Never mind the Latter-Day
Saints of Technology trying out PSK or 2 KHz BW SSB or fooling
with digitized voice, they, the Faithful Followers of the
Church of St. Hiram HAD to write that ad nauseum.

Brian put that hairy old hoar's breath into a TRUE
statement: "CW gets through when everything else does."
It is suprebly TRUE and without blemish.

End newsgroup history lesson.

awl end

(From the Church of Theists Suck)

What Would Jesus Do?

Advocate child abuse and murder amongst many other cruelties.

Christians are always claiming, "heï¿½s the lamb", "our savior",
"the king of peace", "the embodiment of love", amongst the many other
names they associate with a loving, merciful nature. Jesus a nice
guy? Not in my book. Nor in any other personï¿½s who is capable of
compassion and rationality. Letï¿½s examine who the hell the Jesus
character really is. These verses will show not only is Jesusï¿½
"loving" nature a joke but so are the Christians who worship him.
Jesusï¿½ real mission to come to earth:

Jesus says that he has come to destroy families by making family
members hate each other. He has "come not to send peace, but a
sword." Matthew 10:34

Jesus says, "Donï¿½t imagine that I came to bring peace on earth! No,
rather a sword lf you love your father, mother, sister, brother, more
than me, you are not worthy of being mine." The real beauty of this
verse is that Jesus demands people truly love him more then they love
their own family. I ask you how can we love someone that we can not
see or interact with? Love is an emotion pertaining to physical
existence not to faithful ideologies, yet God threatens you with Death
just because your love for your mother maybe stronger than your love
for him. Matthew 10:34

Families will be torn apart because of Jesus. "Brother shall deliver
up the brother to death, and the father the child: and the children
shall rise up against their parents, and cause them to be put to
death." Matthew 10:21

Jesus strongly approves of the law and the prophets. He hasnï¿½t the slightest objection to the cruelties of the Old Testament. Matthew 5:17

Jesus advocates murder and death:

Jesus condemns entire cities to dreadful deaths and to the eternal torment of hell because they didnï¿½t care for his preaching. Matthew 11:20

Jesus, whose clothes are dipped in blood, has a sharp sword sticking out of his mouth. Thus attired, he treads the winepress of the wrath of God. (The winepress is the actual press that humans shall be put into so that we may be ground up.) Revelations 19:13-15

The beast and the false prophet are cast alive into a lake of fire. The rest of us the unchosen will be killed with the sword of Jesus. "An all the fowls were filled with their flesh." Revelations 19:20-21

Jesus says he is the only way to salvation yet he purposely disillusions us so that we will go to hell:

Jesus explains that the reason he speaks in parables is so that no one will understand him, "lest . . . they . . . should understand . . . and should be converted, and I should heal them." Matthew 13:10-15

Jesus explains why he speaks in parables to confuse people so they will go to hell. Mark 4:11-12

Jesus advocates child abuse:

Jesus is criticized by the Pharisees for not washing his hands before eating. He defends himself by attacking them for not killing disobedient children according to the commandment: "He that curseth father or mother, let him die the death." Matthew 15:4-7

Abandon your wife and children for Jesus and heï¿½ll give your a big reward. Jesus asks that his followers abandon their children to follow him. To leave your child is abuse, itï¿½s called neglect, pure and simple. Matthew 19:29

Jesus criticizes the Jews for not killing their disobedient children according to Old Testament law. Mark 7:9

A few other things about Jesus:

Jesus says that those who have been less fortunate in this life will have it even worse in the life to come. Mark 4:25

Jesus sends the devils into 2000 pigs, causing them to jump off a cliff and be drowned in the sea. Clearly Jesus could have simply sent the devils out, yet he chose instead to place them into pigs and kill them. This is called animal abuse. Mark 5:12-13

Jesus kills a fig tree for not bearing figs, even though it was out of season. Jesus must not be as smart as Christians would have us

believe, for he was retarded enough to do something this silly. Youï¿½d think the son of god (god incarnate) would know that trees donï¿½t bear fruit in dry season. Mark 11:13

Luke 12:47 Jesus okays beating slaves.

Uncle Teddie:

Get used to the idea, else believe we crawled out of mud puddles, and if so, get ready for the aliens which are likely on their way here--since there is a great possibility some of them left the mud puddles of other planets before we got our start here...

Anyway you cut it, don't look good...

Course, my rig and my antenna are not "christian", neither do they believe in "mud puddle creatures"--they are in a heck of a predicament there...

Garsh darn it, John. Now you went and did it. I don't know whether to strike my chest three times and recite, "Mea Culpa, Mea Culpa, Mea Maxima Culpa", or to bow five times toward the east and hope that Allah blesses (???) me with several wives and a buggy whip. I suppose I could do both and top it off by throwing a few bananas in front of the Buddha statue just in case.

No need to piss Jesus, Lennie, Allah and Buddha off in one fell swoop, eh? That would surely send me to ARRL Hell in no time flat.

It is probably not necessary to have a Catholic Priest wave his hands over my radios, though perhaps it 'may' give added life to the transistors. I will instead defer and humbly bow to the Lennie God without whose blessings we cannot proceed.

Mea Culpa, Mea Culpa, Mea Maxima Culpa

Now you went and done it...you done tole ole Wogie that he is, in a few words, stupid...

"Your own lack of scholarship is clearly evident in the comments quoted"

Wogie gonna have to sit back and figger this one out. He got no 'scholarship' but from his Devry mail order Master Degree. Cost Wogie all of $249.30 plus tax.

"If Saul were alive today, he would probably say "If Woger posts his photo on Yahoo, it is a shame unto him."

Nice quote. Woger, however, would counter that Lloyd was behind this post. Wascallly Wogie sees Lloyd behind every door, in every shadow. Wascally Wogie has never been known for his intellect...

Why am I not suprised?

I always figured he was out of control in many aspects of his life.
Yet, he always maintained that he doesn't act on the air like he does
here on RRAP. If that were true, he would be two-faced, which wouldn't
suprise me. But to have it confirmed that he's Pappa Oscar Sierra on
the air is a hoot. Thanks.

## 745. Re: stevie doesn make threats but i acuse him aniway haha

Nope.

It's far more effective to rub an idiots nose in their foolishness
than it is to commit an act of violence against them. Peer pressure
does the rest.

And you continue to avoid answering my question..."What makes you
think that I'd hazard my freedom for a putz like you...?!?!"

> > > > Yet here you are stirring the pot.

Oh, you're MAD alright!

And what target? What threat?

> your actions quailify

Not in an AMERICAN court of law they wouldn't.

> you continue to black mail me

You continue to utter unfounded and hillarious lies in a public
forum.

> > > > If I thought someone was a potential threat to myself or my family,
> > > > the LAST thing I'd do is get in their face!
> > >
> > > I choose to balcane the risks verus not alowing a terroist such as
> > > yourself to silence me
> >
> speling cop cut

"balance"

"allowing"

"terrorist"

> > > > The sum of it is that your own suggestion that you're in any danger
> > > > from me is ludicrous, as >>I<< have been saying for years.
> > >
> > > Not when you keep making threats
> >
> > I haven't made any threats.
>
> liar
>
> "one shot one kill..." Is a threat

Nope.

Put it back in context, Markie, because that's where it would be
taken from in court.

In other words...

MARK C. MORGAN IS LYING AGAIN!

> Threating to speak to Todds folks is a threat

Nope.

> > > you are a low level danger
> >
> > So NOW you're saying you HAVE been lying about any danger to you
> > and your "family".
>
> nope I am saying you have prooven you mostly make threats without
> backing em up

There's nothing to be "back(ed) up", Markie.

The "threat" was a mixture of YOUR paranoia and your need to be a
victim in order to get what you want.

> Wether od not you ever had any intention on caring out your threats has
> nothing to do your making them

I didn't make any, Markie.

> You simply make Idles(so far) threats, but you make threats often

Nope.

> > > terorists and balckmailer need to be resited when possible
>
> > There's no terrorists or blackmailers here, Markie.
>
> spelling cop cut

"terrorists"

"blackmailer"

"resisted"

> yep there is his name is Steve Robeson

Nope. Just Markie Morgan lying in public again.

> > In your IMAGINATION maybe...but not in reality.
> >
> > > > > > > It is you being stupid to even type that
> > > > > > >

> > > > >
> > > cuting a lie
> cuting another lie

We could do YOUR trick, Markie...

"cuting another lie...nothing left!"

But since you can't even get "cutting" right, it's apparent that
you've cut nothing but things you're too cowardly to address.

> > > > > (UNSNIP)....foruately one you have havne't carried out,
> > > > > but one you keep repeating, such as your threat to come to the UP

WHAT evasion...?!?!

> > You keep making accusations that I ask you to substantiate.
>
> yes you do, overlooking the fact it has been done in many case Years
> ago, and repaeted again and again

Nope. All we have are your stories of threats. I am surprised we
haven't been treated to any black helo or unmarked vans stories, too.

> cuting another stevie evasion distrotion

"Cutting"

"distortion"

You couldn't have cut a distortion because there wasn't one there.

> > > > > > > yes I would rather take a threat more seriously than t deserves than

>
> threaten you come to the UP

Oh?

Exercising my rights to travel freely within the United States is
now a "threat"...?!?!

> threatening action with various parties

What threats?

> > > stop harassing people
> >
> > I'm not harrassing people.
>
> liar

Nope.

> > You post, I respond. Period.
> >
> > Sorry you don't like the comments, but then the comments I was
> > responding to were pretty stupid to start with, so what did you expect?
>
> liar you are not a bit sorry

Not a liar and sure I'm sorry.

> why do you tell such obvious lies

Why do you put words in others mouths and try to pass them off as
truthful?

> > "First Amendment", Markie...
>
> you don't have any right to threaten people

I haven't threatened anyone.

>the 1st amendment does cover that

No, it does not.

QUOTE:

Congress shall make no law respecting an establishment of religion, or
prohibiting the free exercise thereof; or abridging the freedom of
speech, or of the press; or the right of the people peaceably to
assemble, and to petition the Government for a redress of grievances.

UNQUOTE:

What IS there:

The GOVERNMENT is prohibited from establishing laws IRT the
establishment of religion.

The GOVERNMENT is prohibited from abrdging one's freedom to
exercise religion of choice.

The GOVERNMENT is prohibited from abridging freedom of speech.

The GOVERNMENT is prohibited from impeding the press.

The GOVERNMENT is prohibited from restricting peaceful assembly.

The GOVERNMENT is prohibited from making laws that impede the
people's right to seek relief of their grievances.

What's NOT there:

Any wording that says that, if I WANTED to, I couldn't threaten
you or anyone else.

Yes, there ARE laws that provide penalties for it...But the
Constitution, as you suggest, is NOT source of those laws.

> > > > You're the one with the honesty issues...said so yourself on

Sure you did.

Said you were going to use the ADA to force the FCC's hand to give
you a free ride on the code test.

> I have pointed that you are vulernable to one, never threatened to do
> it you have got anything worth talking

I am not "vunerable" to any suit brought by you!

You sure do like flattering yourself!

> and of plausible to whom? You well that is more than likely right, a
> real crout that is another matter

What? Huh? What's a "real crout"...?!?!

> > Your semi-literate dreck can be considered "harrassing" in it's
> > own way.
>
> really someone is making you read it?

If I want to try an understand what you're saying.

I think learning Serbo-Croation by braille might be easier.

> > And people like you never "intimadate" anyone. Humor them,
> > sure...
>
> not trying to intimadate I would not horn on your territory steve, not
> that you arre any good at it

"intimidate"

"are"

I'm not trying to intimidate anyone, Markie.

> > You've rendered more than your fair share of laughs here!

But you HAVE left us laughing!

Steve, K4YZ

That's yet to be proven. A brief review of world poverty,
neonatal demise and the rise of AIDS, just to name a few, leads me to
question the "omnipotent, benevolent diety" theories.

> All others are mere mortals with failings.

Yes, you are.

"therapy"

What therapy that I allegedly need?

> the dianosis we can only guess at OCD is a good guess, Meglomania
> another, simple delusional behavoir, it will take a real pro to sort it
> out

Your kind of "pros" we can do without.

Look what they've done for you!

> > Why does Brian Burke lie prolifically then suggest mental health
> > issues in others?
>
> therein lies part of your problem you insitance that anyone that
> disagrees with you is lying and mentaly ill

No, Markie.

I "insistance" that people who do not tell the truth are liars and
those that demonstrate abnormal human behaviour are "mentaly" ill,
Mark.

And so far I've done a fair job of ferreting out the truth! We
have you, Brain, and Lennie archived with your mistruths. Liars all.
Lennie's more poetic with his and you're more prolific...Brain...?!?!
Well, Brain will just take his cues from Lennie and hope for the best
like any good PuppetBoy should.

YOU stepped on your own tail and let the cat out of the bag about
your own mental health involvement, but then I HAD been claiming that
it was my professional opinion that you were in treatment.

Seems I had that right all along too!

Again!

Steve, K4YZ

> ham had been banished to "useless frequencies" everything above 200M

There are some pretty darn good reasons why high-speed digital HF won't work well. And they aren't related to early "knowledge" that caused hams to be relegated to those higher frequencies at the time.

Radio is a fairly mature field, and digital is getting there. Many people have a pretty good idea what will likely work, based on education and experience. And HF is an unruly beast, given to noisy and incredibly variable conditions. We don't have to be rocket scientists to gain that knowledge.

Just as an exercise, how much information can be carried by a 1.8 MHz signal? How much error correction will be needed during the summer, and how much during the winter? Why is there a difference? Why would a wireless digital transmission system use UHF and above for data transmission?

> when was that Jim

A long, long time ago. When almost nothing was known about propagation.

>>> Jim might note that they do some bandwidth tricks in similar manner
>>>as he proposed per our conversation in here earlier. Not exact, but
>>>along the same lines
>>> Hopefully we will see an article from those who know the right way
>>>to HF digital soon. 8^)

I don't have my CQ handy, but it took them a fair amount of time (measured in minutes IIRC, to transmit some heavily compressed (beyond maximum jpeg compression), and therefore really poor quality (by almost everyones standard) pictures.

Didn't I make a challenge with some of the HF high-speed digital believers in here to do a sked? I think the "answer" was that I was going to steal the technology.

Not that that is likely, but how about say some of the believers among themselves, do a proof of performance of the technology?

Or is this just one of those Wondertenna type ideas that crop up from time to time, only to be found lacking when introduced into th e real world?

- Mike KB3EIA -

cuting libel

> And what target? What threat?

me the htreat s are violence, (one shot one kill..) outing Your
demands I comply or youd tell everyone I was gay, your conitued
harrasment unless I do as YOU say

It is all blackmail

>
> > your actions quailify
> >
> Not in an AMERICAN court of law they wouldn't.

sure do

>
> > you continue to black mail me
> >
> You continue to utter unfounded and hillarious lies in a public
> forum.

nope

you are simply an ignorant stalker, and blackmailer.

>
> > > > > If I thought someone was a potential threat to myself or my family,

> taken from in court.

it is in context Killing was never the subject

discsion of murder has nothing to do Radio or Morse Code

cut

> > Threating to speak to Todds folks is a threat
>
> Nope.

sure is

>
> > > > you are a low level danger
> > >

> > backing em up
>
> There's nothing to be "back(ed) up", Markie.

yes there is and you keep making threats

cuting another lies

> > Wether od not you ever had any intention on caring out your threats has
> > nothing to do your making them
>
> I didn't make any, Markie.

One shot on kill .. is a threat,

you are lying in saying otherwise

that it was idle matters not

>
> > You simply make Idles(so far) threats, but you make threats often
>
> Nope.

abolsutely true
>
> > > > terorists and balckmailer need to be resited when possible

> > spelling cop cut

> > yep there is his name is Steve Robeson
>
> Nope. Just Markie Morgan lying in public again.

just Stevie unable to be a man an accept respoiblity for his own
actions, and his own words

Just Stevie squirming to evade the turth of his bulling personality

>

> > > Nope.
> >
> > yes you do you threatened Tood I saw that, you conitue to threaten me,
> > idly it seems but you continue
cuting spelling cop

> I didn't threaten Todd.

you sure did

you threatened to call his perants you threatened to contact his ISP
(you carried out that threat but it was still a threat

you are a bully and so juvi you can't even take responiblity for YOUR
actions

you will now proceed to blame Todd for these threats

Nothing you do is YOUR responiblity

>
> > and you lie about it
>
> Nope.
>

> > > > threats to call a prosecuter for my lying online, threats to came to

> What threats?

the threats typed above

>
> > > > cuting stevie evasion
> > >
> > > What evasion?
> >
> > your evasion
>
> WHAT evasion...?!?!

your eveasion

I have typed it often typed a few examples in this post and will not
repeat just becuase Stevie the BULLY demands I do so

>
> > > You keep making accusations that I ask you to substantiate.

> truthful?

that is your gig stevie

>
> > > "First Amendment", Markie...
> >
> > you don't have any right to threaten people
>
> I haven't threatened anyone.

lying again

I have seen you threaten Todd and BB and you have threatened me

when 4 people tell you are doing something an inteligent man would
start to wonder if there wasn't something to it, but of course that
lets you out

>
> >the 1st amendment does cover that

>
> UNQUOTE:
>
> What IS there:

so what?

a key word in the ruling of the court is peaceably

that is why threatening people ois ilegal that it why the hate speech
have a legs to stand on

you are guilty of threats and hate speech

cuting stevie off target rant

>
> > > > > You're the one with the honesty issues...said so yourself on

nope you would have to be angery to use the word shit. I use when I
deem it proper, very calmly

so another lie

I am not angery with I am disguted by you

>
> > > > been doing it for years
> > >

> you a free ride on the code test.

Lie I said a case could be made

I said it was a hard case at that time with the treaty lang in place

I also said It could be VERY expensive and more than I cared to venture

you don't understand the difference between saying something could be
done and it will be done , or that it will be attepted

that you confuse tense and moods is part of the process where you so
often distrot and twist a true stament someone has made, into lie of
YOUR making

>
> > I have pointed that you are vulernable to one, never threatened to do

Mike, did you just associate the word effort with NCI? This is more about
the elimination of "effort."

Uncle teddie:

Many things are highly improbable, I agree, such as evolution.

However, if you venture a religious belief in evolution, and then there
are millions of millions of planets out there near similar to earth, with
billions of billions of mud puddles on them--aliens become a given
probability.

John

On Sun, 07 Aug 2005 12:23:09 -0400, Uncle Ted wrote:

>Best of Luck making your journey to the present.

Jimmie is still stuck in the PAST.

He is so tense he loses his tenses...it should be "what the
majority WANTED"...in the past tense.

As to "what happened [with regard to] NPRM 98-143," that is
all viewable on the FCC ECFS under that Docket number. In
short, there are 2,367 entries there up to and including the
FCC-official cut-off date of 15 January 1995. There are a
total of 2,671 entries under 98-143, some of which are
marked as received as late as 2005! That's indicative of
lots of folks stuck in some kind of Time Warp.

Report and Order 99-412, released in late December of 1999,
made NPRM 98-143 a thing of the past. Once an R&O is
issued, its Notice of Proposed Rule Making is NO LONGER a
notice but an ORDER.

NPRM 98-143 covered MANY different aspects of U.S. amateur
radio regulations BESIDES the morse code test. For an
excellent statistical summation on the ENTIRETY of the
Comments submitted, LeRoy Klose (KC8EPO) did an excellent
job in no less than 4 Exhibits to the FCC plus a Reply to
Comments (15 pages) which is a text tabulation of the
various Commenters, dated 25 and 26 January 1999. In those
it is quite evident that the no-code-test advocates were
the MAJORITY and NOT the minority as Miccolis alleges and
has alleged in past postings here.

FCC 99-412 was released, became LAW for U.S. radio amateurs
and that is that whether morsemen like it or not.

WT Docket 05-235 is about >>ONE<< specific change to U.S. amateur radio regulations: Elimination of Test Element 1 concerning the morse code test required now for a new (or "upgrade" to) General or Extra class U.S. amateur radio license. That PAST commentary, ARRL polls, or pipe-dreaming by morsemen are taken as "present day opinions" is invalid for the PRESENT.

Jimmie and other rabid morsemen are in deep denial of the growing desire of those interested in amateur radio to DO AWAY with the morse code test. That growth has burgeoned into a MAJORITY, not a minority any longer.

A problem with those in deep denial is that they simply cannot recognize a public desire which is opposed to their own self-centered personal desires on retaining some mythical standards and practices of past times when they "bought into" those old standards and practices. As a result we have all that spin doctoring by the morsemen doing a failing job of keeping archaic standards and practices alive. They are guilty only of necro-equine flagellation...i.e., "beating a dead horse."

bet not

Although there are some licences that don't allow homebrew, none of them allow full power, i.e. I don't think anywhere has banned homebrew altogether. Of course, there are different ideas of what reduced power means, i.e. 10w in the UK where full power is only 400w, versus 200w in Canada where full power is 2,250w!

There may be more attempts to get a lower level licence in the US, maybe by Fred Maia, but the FCC has made it pretty clear in recent comments IMHO that they think the Tech is easy enough, so I don't think it will ever happen. End of story.

To morsemen minds, that's absolutely true.

They think there is no better "music" than the on-off keying of
an RF carrier wave by the mislabeled "international language"
of morse code. ALL "interested in [ham] radio MUST test for
that skill...to "show dedication and committment to the
amateur community" (which consists of the individual mind of
each morseman in their hive-collective).

"Full power" is a very subjective term. That's NOT an issue
in WT Docket 05-235 regardless of how many are trying to
ignite differing wars of words in here.

No problem on power output for those that learn what to do.
I've operated 40 KW peak-power HF transmitters with as much
ease as handling a 20 W peak-power HF transceiver on a
manpack (AN/PRC-104). From RF power levels of around 100 W
output, there's a proportional increase in possible damage
to the human body with higher powers, plus a greater primary
power demand (i.e., higher electricity bills), and greater

cooling necessity in warm climates. Not to mention increasing
out of pocket expenses whether the transmitter is home-built
or ready-built.

>There may be more attempts to get a lower level licence in the US, maybe by
>Fred Maia, but the FCC has made it pretty clear in recent comments IMHO
>that they think the Tech is easy enough, so I don't think it will ever
>happen. End of story.

The ARRL has blessed and sactified the "entry level license"
as Technician class...which should be the end-all of that,
should it not? :-)

Curiously, the ARRL once upon a time lobbied long and hard
to get the ORIGINAL "entry level license" of Novice and did
get it. Yet, they fell down on the job of supporting it in
following years. Novice class numbers have been decreasing
for over a dozen years, longer than the existance of the
no-code-test Technician class license.

However, WT Docket 05-235 doesn't call for a "new license
class" or change any class names or even talk about an "entry
level." All it does is propose to eliminate the morse code
test for ALL U.S. amateur radio license classes.

WT Docket 05-235 is NOT about any "restructuring" of rules
save for the regulations about Test Element 1. However, if
the code test is eliminated, it will be the Death of Ham
Radio As They Know It to the rabid morsemen and they will
mourn its passing with mighty lamentations, sack cloth,
and ashes. The majority of amateur radio hobbyists will
continue on, adjusting to the new regulations, and possibly
embrace NEWER things besides a primitive communications
coding first used 161 years ago.

old new

>>>propagation phenomena.

Why do you keep beating this Dead Horse on "rapid transmission
of high speed digital transmission?"

Shannon's Law is absolute, proven by experiment, embraced by all
the OTHER radio services. Shannon's Law is 58 years old and
mature, both de facto and de jure.

"Vagaries of wave propagation phenomena" [at HF due to ionospheric
changes] has been well-known to academia, the commercial and
government users of HF since the 1930s. The most well-known
(to non-amateur communications on HF) is "selective fading,"
a relatively short-duration change of BOTH amplitude and phase
over a relatively narrow band-span. In commercial SSB (using
12 KHz bandwidth format of four 3 KHz separate voice-grade
circuits) this was much reduced in its effect by simply
sending TWO tone-pair sets for each AFSK TTY circuit, the pair
separated by about 1 to 2 KHz; voting circuitry at the receive
end picked out the "best" received signal. That reduced at
least 95 percent of the error effects of selective fading.

The "charge" that high-speed data transmission is "impossible"
due to some (unquantified) "phase changes" has been thrashed
and discarded by at least two HF digital voice transmission
methods, one of which (DRM or Digital Radio Mondial) has been
in test for five years and is now heard over two dozen HF
broadcasts. DRM can carry binaural ("stereo") audio. The
bandwidth occupancy is NO GREATER than a conventional monoaural
AM transmission. The key to such untilization of a relatively
narrow bandwidth for higher throughput lies in examination of
the environment and using coding theory to fit that environment.

Will it send "high-quality" digital pictures in data mode? YES, but at relatively slow transmission rates depending on the bandwidth used/allowed/allocated. Shannon's Law is irrefutable. It will NOT carry "live, feature-length motion pictures." [that seems to be your goal but that goal is not possible to attain] It can send high-density image data without problem, with a minimum of error, but a cost of waiting a relatively long time for each image.

There are OTHER forms of on-the-fly determination of "the vagaries of propagation" [on HF]. The U.S. government has been using a standardized method for about five years now called Automatic Link Establishment or ALE. While perhaps not adapatable to amateur radio HF applications, it is a system for continuously monitoring signal quality, a scan of other predetermined frequencies to check their quality, and automatic changeover to whichever predetermined frequency signal quality is best. ALE on HF has been devised and tested expressly for HF beginning about two decades ago.

Both of the above mainly-HF systems have been little publicized in the amateur radio press. That is a fault of the amateur radio publishers, not the system. It is NOT the simplistic basic-level radio theory (and coding theory) which can be easily digested in a single reading sit-down. They require THINKING, "non-traditional" thinking away from what had been theory of a half century ago and propagated as "state-of-the-art" long after its first appearance.

On pushing throughput to much greater rates in relatively narrow bandwidths, consider the advances in amateur radio HF techniques over the last half century. In the 1950s the "standard" RTTY frequency-shift was 850 Hz for 60 WPM TTY 5-level coding. Today it is 170 Hz for 100 WPM 8-level TTY coding. AM voice used to take at least 6 KHz bandwidth but single-channel suppressed-carrier sideband cut that in half plus reducing the old AM heterodynes from CW carriers. PKS31 innovated and devised in the UK, tested in Europe, was a 30 WPM RTTY system using a bandwidth no larger than a conventional on-off keyed "CW" (morse code) signal. Those are now "accepted" methods because the amateur radio press has publicized it.

However, in OTHER areas, look at the common, ordinary PC modem operating with Plain Old Telephone System (POTS) lines of 3 KHz bandwidth. The data rate over the "56K" modem is about NINETEEN TIMES FASTER than "straight" analog AM. MILLIONS are used each day in the USA alone. You don't look into the WHY of such a large increase in throughput and I don't understand why you don't. The answer lies in combinatorial modulation PLUS some rather

simple coding theory to increase the data bit rate to a top of 56 THOUSAND bits per second. The modulation of the modem's audio tone carrier is a combination of AM and PM. It does NOT violate Shannon's Law. Such an EQUIVALENT system could be applied to HF (it is in the TORs or Teletype Over Radio outboard boxes) but that can be incorporated into an HF transceiver as an integral part. All of the radio amateurs, duly licensed as part of the "nation's service" and complete with federally-authorized call signs, seem to be satisfied with the LAZY way out...let someone else do the innovation and design. They won't "accept" it until the product ad appears in QST ready for shipment, has reviews from the "ARRL Lab" and all can argue over the ad specifications. Packaged innovation ready to go. Done by OTHERS. Everything for "the bands" (meaning only HF). "Standardized." :-(

I've brought up "scaling" of data rates before but that seems to be a non-understanding topic. It isn't in a convenient QST or CQ or QEX article so it isn't "accepted." Yet SCALING is done (has been for decades) in antenna testing as well as data rate. Look at high-definition television broadcasting that is now phasing in to consumers. The image throughput is more than doubled PLUS extra data is sent for quadraphonic sound (not just "stereo") and closed-captioning in a channel space NO LARGER than (in the USA) 6 MHz. It's a three times REDUCTION in bandwidth...PLUS more than double the amount of video data. The secret is in the MPEG (Motion Picture Experts Group) digitized video data coding and compression. Not only that, the image/sound quality is very nearly FREE of all the "propagation vagaries" due to phase and analog changes from moving reflections, greater immunity to random noise (such as from tools or appliances). SOMETHING EQUIVALENT might be done for audio on HF...perhaps scaling down the present-day SSB bandwidth of about 2.1 KHz to just 700 Hz or maybe 1 KHz...more than double the band occupancy for voice signals and with much greater immunity to "flutter" and selective fading effects.

Look at the WLANs (Wireless Local Area Networks) now in use by the hundreds of thousands daily, perhaps a dozen or more in the local vicinity of other WLANs...AND in the same band as cordless telephones (dozens more) and high-data-rate systems such as CCTV monitors or music distribution (dozens more). Each is NOT INTERFERED WITH by all the other local systems, all can operate as if the others did not exist. The secret to their success is Distributed Spread Spectrum techniques plus coding theory. Every system EXISTS in the same bandwidth yet each is separate and undisturbed by others. No "heterodynes," no need for

fancy, expensive filters-in-the-IF, or ultimate refinements of decades-old conventional techniques.

But, you don't seem to care about such possibilities or even getting a hint of what might be possible. You, like way too many others will only "accept" something if someone else has worked it out and it is a PRODUCT on the market. Then you can sit around and natter about the advertising phrases and argue someone's "lab reviews" and sound like "expert radiomen" of "extra" class when you don't know dink about its insides. Intellectual SLOTH. LAZINESS. All you wanna do is play wid yer raddios and pretend to radio greatness. <shrug>

Mark, (KB9RQZ?)

The difference between your reply and Phil's is your addition of the
statement above. Phil answered the question with the insight of a fmr. FCC
employee. He made no sarcastic quips based on a guess re. my
approach to "the LAW."

In essence, it is you who closed with a rude statement. BTW, I did not mean
to be rude to you. <hihi> is meant as a friendly chuckle, similar to :-)

Heheh There is another argument in favor of no testing. If the public interest is having barriers removed, then there should be no testing in order to allow more people to become hams. Thanks for the point!

Of course it doesn't apply to some people. It sounds like your idea of testing is to have a separate test for every facet of Ham radio.

Of course, but Communism is done, right??? hi hi.

Russia has NOT dropped Morse. Nor has most of the ex Eastern Block countries.

Years ago when I was in Germany in the US Army it was decided to fire back up on CW training. The reason was because the Ruskies were having a field day trashing our HF nets. We were on AM/SSB/RATT (RTTY), and they would get close, or right on top of them on CW.

It was a total flop because hardly anyone in the US Military new Morse well enough to copy it.

Point is this. The Russians and their close neighbors are smart enough to realize Morse is a worth while mode and will continue its use.

Dan:

Too bad the americans had not developed HS Digital Checksum Error
Corrected Voice Transmission Packet methods over spread spectrum... could
have filtered the CW audio and went right on, would have pi$$ed 'em off in
style! Oh well, too late for back then, but today we can!

Indeed If it serves the public interest to end testing we should do
that, But then the question is, does it serve the public interest to
end testing?

I don't think so clearly neither does Bill

the arguement the less testing= more hams does indeed work to a point,
but you have taken it to the absurd

clearly the public interest is in having the ARS work fairly well and
be as large as pratcical. It is also in the public interest of the US
that we obey the ITU treaty (as amended over the years) which requires
some testing.

The currect tech pool (the only pool I am famier with personaly being a
tech seem OK I would shift some stuff off and more of some other stuff
on, but the result would be roughly as hard, so I am basicaly satified
that thing are OK on that score

how many tech you know with all mode rigs?

I suppose there may be afew with multimode rigs and no HF but their are
only rig comercail rig that way today The ICOM 910H ( i have one of
those) ten tect used to have one

I'll agree that going from FM only would be a jolt

but YMMV

> Okay, that is what you consider punching a hole in my argument??

you calim all these hams need and don't have the rig many do all need to HOME brew an antenna you went on and on about the barriars. In the younger population base they buy SUVs costing as much 60+ K and buy them every few years a few grand is not much for something that will last quite awhile, takes a bit of nerve to take the step but it is hardly a Barriar equal to Morse Code

Len:

As long as evil exists in the world, there will always be a "John Smith" to oppose it--a thousand deaths and the spirit of John Smith will live on. This man is invincible and immortal, death is only a tunnel to the next life, and to pick up the fight of evil men once again!

We stand at a unique time in history. The "Cult of the arrl" has fallen, yet refuses to die an easy death. The ancient cloistered walls of blood sucking amateurs is being thrown open to air the uncounted ancient pharts which have polluted these halls. The evil deeds which have been done here haunt the walls like insane spirits of ill will and dangerous plans.

The candle of progress threatens to cast light into even the darkest corners of this ancient monastery. Those ancient ones (amateurs) who have halted progress and kept radio as their personal "Moose Lodge" will have their names despised and stricken from the records as a movement on the scale of a "Biblical Event" slays the evil spirits who have brought radio to its knees and sucked the blood from it veins. The stake is poised over these black hearts of these evil men and the mallet begins its deadly plunge towards its target...

A bright day is coming, "God Bless Amateur Radio!" We move towards the day when extras and chicken banders will live in harmony!

Those brave men who still exist move to pick up their light-sabers and enter the fray....

On the 'morrow we pray the battlefield be littered and deep with the bodies of our enemies...

Luke Skywalker --AKA-- John Smith

>Dan:
>
>Too bad the americans had not developed HS Digital Checksum Error
>Corrected Voice Transmission Packet methods over spread spectrum... could
>have filtered the CW audio and went right on, would have pi$$ed 'em off in
>style! Oh well, too late for back then, but today we can!

The only thing WRONG with this back-and-forth is Dan's claim
of Disability from Vietnam. The Vietnam War ended in 1975,
THIRTY YEARS AGO. Had he been in communications with the
military in Yurp "after" that, he wouldn't have any "disability"
since he would be on active duty. If Dan Jeswald got out of
the military DUE to warfare in Vietnam, then his personal
experience from Yurp military exercises is THIRTY YEARS OLD.

Present-day, and back in the FIRST Gulf War times, U.S. land
forces most definitely have COMSEC (COMmunications SECurity)
which pretty well defeats old-style jammers. The first instance
of that was the AN/PRC-119 family, "SINCGARS," which is a
selectable digital-voice/data, single frequency or frequency
hopper on 30 to 88 MHz. It became operational in the U.S.
Army in 1989, first sets to Army in Korea. At frequency hops
of 10 per second, it is virtually immune to standard (old-style)
jamming and very resistant to "noise jamming." [it's damn hard
to detect, let alone jam] Later ("SIP") versions available by
the SECOND Gulf War ("Revenge of the Shrub") had fully built-in
COMSEC (voice scrambler no longer an external box) and half
the size of the original manpack. A QUARTER MILLION R/T sets
(manpack, vehicular, airborne) have been produced to the end
of 2004 and all fielded.

The land forces use a variety of radios and pieces of the EM
spectrum, NOT so totally dependent on HF as Dan would have
you believe. For MOST of the message transmissions, those
go through VHF, UHF, troposcatter, and microwave radio systems
with microwave dominating the major relays through military
comm sats...one reason why CENCOM could command the 2nd Gulf
War from Florida.

As to HF radios in the military land forces, the AN/PRC-104
family (20 W manpack through 400 W PEP vehicular) is a synth
frequency control unit for a full 3 to 30 MHz span and with
automatic antenna tuner (even in the manpack!) and direct
connections to COMSEC boxes. Designed and built by Hughes

Aircraft Ground Division, it became operational first in 1986. It will be replaced by the AN/PRC-150 family designed by Harris, called by them "Falcon II." The "150" is more resistant to jamming and has built-in COMSEC.

What these very amateur "military analysts" don't understand is that the RUSSIAN comm equipment "sold" to Iraq in the 1st Gulf War ALSO HAD SS-LIKE RF SCRAMBLING. That was back in 1990, 15 years ago. [they also had very Russian armor in which they carried those NON-morse-code radios]

As to the alleged "CW intel from behind the lines" BS spouted by a few in here back some 6 to 7 years, the U.S. Army had the (now obsolete and replaced with newer) UHF portables with built-in data, "chiclet" keyboards, LCD mini-screens and with three different portable antennas to shoot to the comm sats or to orbiting comm relay aircraft. None of this nonsense of easy-to-DF HF slow-speed "CW" where the RF was spraying in all directions from omnidirectional antennas. Data rate then was 1200 BPS and the antennas directional.

Whatever the Russians do in amateur regulations is a FAR cry from what they field in their army...as modern as any even if they have meager maintenance and not as much of the good stuff as the US military has. "WE" know HOW to jam them, or at least most of what they have for radios...the reverse has NOT been true for at least 15 years.

You can take my word of it or not. I didn't "stop" working in communications for any part of DoD after my Honorable Discharge in 1960. I've played with SINCGARS and entered enough hopsets through its touch-screen front panel. I would have personally liked to work on the PRC-104, at least in operational testing, but other contract work called. What I've remarked on in public here is FROM public information that anyone can get, on paper or electronically.

Instead, we have all these other "military analysts" claiming ten kinds of "knowledge" (some allegedly personal) which, in all likelyhood, comes from Popular Mechanics or old TV shows. Even the "FAS" (Foundation of American Scientists) is behind the times with old data from the 1980s. Better than nothing, I suppose. One thing for sure, the Russian amateur radio regs are NOT formulated to "build up a pool of trained morsemen" to serve in their military for their national whatevers.

Geez, if all these renowned AMATEUR military radio experts were telling like it is, the USAF recruiting posters would feature "Air Crews For B-17s and B-24s" and the USA would still have sojer pictures with pre-1940 'dish' helmets and lace-up leggings a la 1940. :-)

Unless something new has come up, WT Docket 05-235 is NOT concerned whether or not the Russkies still test for morse code. The FCC doesn't regulate in Russia...any more than Stebie Wundermurine "regulates" Somalian radio.

Whatever Russia cares to do after WRC-03 is THEIR concern, not ours. We and the Brits have to help them raise their mini-subs or record their interceptor comms as they shoot down Korean civil airliners (played back in front of the UN some time ago). On the other hand, a regular columnist at ANTENNEX website is Russian and they are NOT sticking with 1950s technology these days.

But, there's some ruff-and-tuff commie sympathizers talking at ya, John, and don't nobody step in THEIR way! :-)

Dosvedanya droog Ivan

day off

It the other way around, Dan: Keep your friends close, and your enemies closer.

But otherwise you are spot-on.

Ideologies aside, there is one big difference between their country and ours. During WWII, they were brought to the brink of existence, and survival was not at all certain. That has perhaps changed their outlook on communications in extremis.

Here, we "know" that in emergencies that we will use cell phones and the Internet, and all will be well. For some reason or other, they think that perhaps a time will come when technology can fail. Then whatchya got?

>We need someone to crack a window and let some fresh air in!

Absolutely cannot be done unless "we" become MEMBERS and
"work for change from the 'inside'." [repeated warnings
from Dee Flint in here]

Problem is, the entrenched officials and BoD are RESISTANT
to "change from within" as evident from their regular BoD
Meeting Minutes given on their websites. They do things
THEIR way and expect all to fall-in and pop-to. After all,
they "represent all amateurs in the USA" and say so up
front.

I'll have to check out the QST advertising page on the website,
see if they have a new "Publisher's Sworn Statement" on their
membership numbers. ARRL have never had more than a quarter
of all licensed U.S. radio amateurs and, at the end of 2004,
had only about 20 percent of them according to membership
numbers they gave.

However, in THIS newsgroup, all of the PCTA extras bow down
and accept all League words as sacrosanct. After all, Hiram
Went To Washington right after the end of WW1 and "saved
ham radio" all by hisself. For that all are supposed to
forever show gratitude and obediance to the ARRL, even 86
years after that "fact"!

Something to consider: The present elected President of
the ARRL was a former salesman. [see connection? :-) ]

Yeah, after rereading it I wasn't very clear, Bill. I just fear that some of the Anti-Morse arguments might be adapted to gain other, less desirable changes in Amateur radio.

> >>>>of licensees? Sheesh!

We know pretty closely how many individuals there are with
current (unexpired) FCC-issued amateur radio licenses - about
664,000

What we don't know is how many of those ~664,000 fall into
the following categories:

- Inactive due to being dead
- Inactive due to being seriously sick or injured
- Inactive due to loss of interest
- Inactive due to lack of resources (time, money, space, etc.)
- Slightly active
- Moderately active
- Very active

Worse, the definitions of the last three categories are entirely
subjective. If a ham is on the air 100 hours per year, is that
ham slightly, moderately, or very active?

> >>>This approach has been in evidence early on.

No, it's just somebody's opinion.

> >>>If we are told that the only thing needed
> >>>to go digital on HF is to
> >>>hook up that 56K modem to the rig, then that is the truth.

Actually, you *can* hook up a 56K modem to your HF rig and
"go digital". Doesn't mean it will work....

Note that almost all dialup modems have the ability to
operate at less than 56K. Backwards compatibility and
all that. Some will go all the way back to 300 baud.

> >>>If we are told that Ham radio is dying, then that is true.

Ham radio has always been "dying" - and always being reborn.

I was around back in 1968 when some folks said that 'incentive
licensing' would 'kill amateur radio'. Those folks said it was
completely unreasonable to expect or even ask the average ham
to get an Advanced, let alone an Extra.

Yet in the decade after those new requirements were put in place, the
number of US hams grew from about 250,000 to about 350,000.
And that was before the VE system and published question pools.

Sure, some of that was helped by the Bash books, but there were
no Bash books for 20 wpm Morse Code.

> >>>You can't argue with someone who makes up the
> >>>facts as they go along, so why do it?

Exactly!

> >>It is tough to beat an anonymous man with
> >>invisible sources for
> >>invisible facts.

Yup. Like folks who claim that 57% is not a majority...

> >>>BTW, CQ has an article on HF digital

So send small files!
>
> >>HF will never be the place for high speed
> >>digital transmission. There
> >>is too much noise and signals are subject
> >>to the vagaries of wave
> >>propagation phenomena.

A lot depends on what you mean by "high speed", and what
resources you can use.

For example, if you're allowed to use wide-enough bandwidths,
all sorts of stuff is possible.

If you're allowed to use very high power and high gain antennas,
all sorts of stuff is possible.

If you can separate the transmit and receive sites and/or frequencies
so that full duplex is achieved, all sorts of
things are possible.

If your setup has adaptive features so that it evaluates
the path characteristics and adapts the modulation and
frequencies used to conditions, all sorts of things are
possible.

Of course most of the above is simply not practical for
the average ham, and/or is incompatible with current US
regulations.
>
> > really? gee it falls into the same catagory as
> > when it was said that we
> > ham had been banished to "useless frequencies"
> > everything above 200M

Hams were never banished to everything above 200 meters.

What happened was that amateur stations were required to use
only wavelengths of 200 meters and below. But every station had
a specified wavelength. If a ham wanted to use, say, 159 meters,
s/he needed a station license that said "159 meters".

In 1912 there wasn't much known about how HF propagation actually
worked. The 'useless' idea came from extrapolation of what happened on
longer wavelengths. The ionosphere's role was not
even guessed at by "professionals in radio".

Well you dumb redneck, either they will or the court of appeals will
tell too.

>FCC responds to complaints. The issue is K1MAN, not W1AW. If you got a
>problem with W1AW, send in a complaint. If you got the gonads that is.

Moron, W1AW does the same thing, it is funny that ALL THE MORONS in
amateur radio complain about K1MAN, and not W1AW.

><SNIP> What a blowhard you are Toad. Ham radio is NOT COMMERCIAL.
>Broadcast radio is. Need I continue, really? You are not actually that
>ignorant are you?

And what dumbass you are, Amateur radio is NON-COMMERCIAL, but
NON-COMMERCIAL IN ALL THE OTHER SERVICE CAN MAKE MONEY, BUT ONLY ENOUGH
TO SUBSTAIN THE STATION. Commercial radio can make a profit, read the
rules you freaking moron.

>The FCC has answered that question. It is UP TO THE CONTROL OPERATOR.

yeah but the NAL seems to me is an attempt by the FCC to control the
content. Simply because the definitions of an information bulletin and
broadcasting is very vague.

Oh, heck I don't know how! I'm not looking for a precise poll. My point
is that comments on WT05-235 are only representative of the opinions of
those who chose to comment. Standard disclaimer for an unscientific
poll. I'd say the same if the results were the other way. No *way* could
we work that data into anything statistically significant.

## 806. Reality, "Slippery Facts, and Myths

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-08 01:31:37 UTC
From: John Smith <assemblywizard@gmail.com>
Message-ID: <pan.2005.08.08.01.31.36.624783@gmail.com>
Source record: 115265

To all:

I do have opinions, I do believe I try to form correct ones. I believe I change, adapt and re-think these opinions--and frequently, if there exists proof to the contrary of these beliefs--I would be an IDIOT not to change them, and men of sound sanity and judgement will be the judges. And, what is true today may change, it may not be true forever--I would like to keep in step with my beliefs.

However, somethings I believe are:

1) There are more illegal aliens in the state of California, alone, than there are LICENSED amateurs in the whole united states.

2) I believe there are more unemployed in the state of California, alone, than there are LICENSED amateurs in the whole united states.

3) I believe almost ALL generals and extras are sixty years of age and above.

4) I believe amateur has become a group of self-serving old men of yesteryear and they impede progress, I am unclear if they realize they are doing this, or the extent which others see them as doing that.

5) I believe MOST amateur gear is outdated, uses technology from yesteryear and manufacturers see hams as a minute group in regards to sales and expendature on research and development and retooling.

6) I believe, right now as I type this, that this is all in the first stages of a massive change.

7) I believe amateur are a "Non-Issue" purely from these dismal numbers.

8) I believe much more, and it all points in the direction of the above--amateur radio will change/adapt or die, and the oldsters would have it die--either out of disability, ignorance or design, but the effect would be the same--and I believe even as I type this a few move towards the other direction, and a new day for amateur radio--I believe the truly great men in amateur radio died when the old guy who assisted me in getting tickets died, and I believe he would have been man enough to have stood up to the plate and called a spade, a SPADE!

I am a believer...

John

in point of fact K1MAN's real "crime" is being unpopular sorry to say
that amounts to crime these days

They won't get to it until they are over 40 themselves. Right now they are building their careers and raising families. Doesn't leave much time for the major commitment of being in charge of the ARRL.

Dee D. Flint, N8UZE

The ARRL isn't interested in change from within, either. I've been a
disenfranchised member for 18 years.

> Problem is, the entrenched officials and BoD are RESISTANT

Dee:

I was a boy scout leader in my late 20's into my early 30's, it was hard, my job made some allowances, heck, some of the people over me had kids in my troop.

I think it can be done alright...

Old pharts shine in positions like supreme court justices, you don't need the constitution to change all that much, indeed, in over 200 years it has been a real benefit NOT having much change at all... you just have to realize where you need young minds and where you need old ones...

John

How do other systems work? I suspect that they count licensees, and
work with that. At renewal time, adjustments are made.

Yeah, just like "The Family" Always under attack, always going
downhill" and on and on.

Reminds me of the radio ads for stores that are having their "Biggest
Sale Ever!" The next week that are having another biggest sale ever.
Seems if we just wait a short while, they'll be giving the stuff away,
or paying us to take it away.

> I was around back in 1968 when some folks said that 'incentive

>
>
> So send small files!

Well, yeah! But if we are going to have a new mode, it needs to have
some good features. They can be speed, quality, or even coolness (say
the digital form of Hell-field)

So here we have digital transmission in a sort of competition with
SSTV. The images have to be pretty small, and most have to be compressed
to the point that they are pretty poor compared to a good SSTV image. So
the only advantage that I can see for this digital method is when the
signal is weak and noisy. Then the digital image will be better. Of
course the patience of Job will be needed for all the error correction
needed

>>>>HF will never be the place for high speed

> all sorts of stuff is possible.

Sure. I think some people are believing that I am saying this is
impossible. It is not impossible. But not very practical. I'd have to
work it out, but I think there are some ham segments where we'd need
more bandwidth than is alloted

> If you're allowed to use very high power and high gain antennas,
> all sorts of stuff is possible.

A strong signal mode? 8^)

If the FCC is to trust us with the legal ability to
pop the covers off our transmitters and make
adjustments and modifications, we need to have passed
tests to show that we have basic knowledge of RF and
such. That we'd know how to run and maintain a clean
operation.

It's quite rare that the FCC busts a ham for faulty
equipment anymore.

Didn't we cover this before somewhere? There is a long history of
dancing around the treaty requirements. Like medical waivers for
starters....

My notion of a book like "Now You're Talking!", and a signed affidavit
by the prospective Ham could serve quite well for the "test" process.

THe FCC doesn't make rules based on how polling comes out. One very
good comment can trump many "me toos". Besides, the FCC isn't
in the business of handing out gold stars. If a requirement
serves no regulatory purpose, the FCC doesn't want to bother
with it.

Exactly. A comment that points out something that
was overlooked will have much impact. Not so for
many comments that say "This should be, because it
is "right and good"...

the most that the majority position will count for is about the same as
a "good comment"

but so far looks like No Code will even carry that count

I can just imagine the bureaucrat at the FCC who gets stuck
wading thru all the filed comments searching for the one
that might actually point out something of substance that was
overlooked and would matter. I made my comment short and
to the point: "I agree, do it, drop the code test". So
whoever at the FCC doesn't have to waste much time on
my comment.

AOF:

I checked out Art Bell's site, but couldn't get any figures on how many
"space aliens" are residing in California, I would have loved to have made
a comparison to their numbers with amateurs, as a ratio... I think that
me be another story, perhaps a "gov't conspiracy" and they are obfuscating
the facts... <heart-felt-frown> :(

80%? Eight out of ten? You think I am an alarmist if I use "almost all"
to describe that kind of percentage? <grin>

It's like this "John": The ARRL is run by an elected, unpaid volunteer
BoD. In any practical sense the ARRL cannot be changed from the outside
but it can and has been changed from the inside. The "solution" is
rather obvious isn't it "John"? So go round up all your ARRL
like-minded member buddies and campaign to get one elected to the BoD
to kick off the "revolution".

In other words "John" "lead, follow or quit whining, trolling and
sucking up pointless bandwidth" on the topic.

Yep, what we need is more men who hide behind a pseudonym rather than openly standing by their convictions. As "John Smith", you can post your views without any personal repercussions--and you can check into a cheap motel with some floozy.

> starters....

nope you are simply in error. The waivers (only for speeds above 5wpm)
needed no dance

the old lang required only that Ham be tested for morse code, no speed
was required, indeed we could if were dancing around the Treaty have
said ok all Hams will tested we send every one of them a "." and if
they answer that was E the requirement would have been met

the higher speed tests were all the ARRL's idea, and they sold it to
the FCC
>
> My notion of a book like "Now You're Talking!", and a signed affidavit
> by the prospective Ham could serve quite well for the "test" process.

feel free to propose it and watch it get shot down.

but if you truely believe that is all that should be required then you
should be proposing it otherwise you are just blowing smoke

Yes, Mark. I told "bb" that I've never seen a branch deep enough to swim in (follow along here) and he said that I probably "layed down" in it though there was no indication of any probability that I would do any such thing. I asked him what my motivation would be for doing so. If you need further help on this stuff, I'll be happy to attempt to explain it to you.

But you've told Jim that he wasn't reading when you said you'd simply
tried everything, some of them a number of times and that you just
couldn't pass a morse exam. Now you'd have us believe that it is
```

possible for you to do so. You're making some improvement but it makes your previous statements sound a bit disingenuous.

No, nothing forces me to accept your lifestyle as moral or normal. I
don't have to hang out with you or even like you. Now *that* is
American liberty.

> but you might try doing some reasarch or knwoing what you are talking
> about too

I know exactly what I'm talking about. I even wrote it down for you.
I wrote it in response to your statement to Steve that he didn't know
"turth" and didn't know normal "behavoir".

I don't see you being made the poster boy for normality any time soon.
It is my view that you'd first have to be normal before making the
comment you directed at Steve, Colonel Morgan.

Dave:

Your ideas are bit strange, you probably didn't like old ben franklin when he assumed a pen name. Perhaps you refuse to read books when the author has adopted a pen name? Perhaps you despise actors for adopting a stage name? Perhaps your appreciation of a rose is solely based upon its' name, and "by another name, a rose is NOT a rose?"

Funny, it is principals and NOT personalities which have the true merit and worth--you seem to lack ability to grasp that concept... a good old buddies club where you only accept argument when it comes from a name you recognize is not available to you always, let me see, in real life those individuals who assign worth of an idea based on the persons identity whose idea it is, is called, in slang mind you, a "Kiss Ass" or "Brown Noser"... you are lost without knowing the identity behind the idea!

Perhaps the voting system of the USA is found in fault with you--it seems to guarantee anonymity... you seem to need a face and a character to attack--character assassination is your forte!

You seem to avoid argument on only an ideas worth, resorting to attacking thin air in an effort to confuse the unwitting... well, some just must proceed with the handicaps the world, God and nature assigns them, or they choose to shackle themselves with... strange though, how you choose to make yourself a prime example of the close minded "good ole boys" I mention, it almost makes me think you get the idea on some unconscious level and act out emotionally (but in text form) on what is presented--strange...

Colonel Morgan,

"John Smith", so the jokes go, is a commonly used name by those checking into a hotel with a woman other than one's wife. I didn't mention "John Smith's" or anyone else's genitals.

To get the "Worked All Hams" award one has to work each
and every licensed ham in the USA. All 600 thousand of them.
Which means they all must be active...

:-)

>
>Dave wrote that last. But I agree with him

Sweetums, you've been plugging for that all by yourself for
lots of messages in here. You NEGLECT any other forms of
communications and concentrate on imagery, many-pixel images.

"HF will never be the place for high-speed transmission?"
What do you "extra experts" think BPL is basically? Clue:
High-speed data transmission, most of it on HF.

> And the answer to "why" is that other people bring it up. So I answer.
>
> Is that not allowed?

It's allowed. It's also allowed that YOU *might* consider
OTHER forms of communications on beloved HF other than what
the holy Handbook says is "good."

Quit acting petulant.

>> The "charge" that high-speed data transmission is "impossible"
>
> Who said that? It is most certainly possible. We just have to be
>patient, very patient.

Sorry, I've lost my patience with the brain-draggers in here
only considering U.S. ham radio "high-tech" being some finished
product advertised in QST and having a "lab review" on it all
glowing with praise.

There's an INFINITY of POSSIBILITIES that can be done in U.S.
ham radio and about the ONLY innovation of late is the Tayloe

Mixer (patent pending). Mike Gingell in the UK came up with the polyphase audio phase shifter for better phasing SSB and Peter Martinez, also in the UK, came up with PSK31. Once in a while some U.S. guys come out with an innovating product and all you "communications experts" all get together and carp it up, refuse to buy it, or say whatever each one of you has is "so much better" than anything new. Newness is to be feared?

Go back in time to the late Dick Carroll complaining and grousing about his peripheral DSP audio filter...he said outright in here that he had difficulty setting the controls! Waaa...waaaa...if it ain't like it usta was in the 1950s and 1960s it ain't no good!

Okay, so somebody INNOVATE something.

INNOVATE something besides sitting around gabbling how "good" and "expert" you all are because you are morsemen and grand champions in radio because you are federally authorized for beeping. The rest of the radio world is NOT buying it. The rest of the radio world will continue to improve as it has been for years. The U.S. amateur radio world can only play copycat and steal from that, having the ARRL say that "hams invented it" when it didn't.

Tayloe did it. What have the other 700K+ done? Sit around griping because none of you have done anything?

non seq

Uncle Ted:

Let me try a simple approach for you. Since, by your own text, you dismissed the possibility of Jesus, the ONLY other explanation currently "on the board" is evolution. I accepted debate on what that all involves, such as the existence of aliens, and moved to that platform... why would you wish to go back and debate Jesus, an idea/possibility you have dismissed. I simply don't know, could be here because of "God" and awaiting an angel--or, could be here because of mud puddles and are awaiting an alien... But, it is damn sure one or the other (well, there are other possible reasons, but even fewer supporters of those...)

> name?

I'm fine with actors. I've watched Alec Baldwin in movies and don't
have a problem with him *as an actor*. When Alec Baldwin pontificates
on politics, I don't give him any credence. Are you the actor "John Smith"?

> Perhaps your appreciation of a rose is solely based upon its' name,
> and "by another name, a rose is NOT a rose?"

You may have a point. I'm not likely to purchase a rose bush of the
variety "John Smith".

> Funny, it is principals and NOT personalities which have the true merit
> and worth--you seem to lack ability to grasp that concept...

Your recent stuff reads like the rantings of homeless folks I've
encountered in New York. There is little of principal and little of
fact. Actually, there's been little of your stuff in which true merit
and worth has been addressed or established.

> a good old
> buddies club where you only accept argument when it comes from a name you

> or "Brown Noser"... you are lost without knowing the identity behind
> the idea!

Not so, "John Smith". If I'm present at a town council meeting, folks
are free to state their opinions. They have faces and they give their
names. No pseudonyms are permitted and no one stands behind a velvet
drape to present his views.

> Perhaps the voting system of the USA is found in fault with
> you--it seems to guarantee anonymity... you seem to need a face and a
> character to attack--character assassination is your forte!

You can't walk into any polling place, unregistered and vote. Your
identity is known and you've previously presented credentials which
establish your right to vote. What is not known on election day is *how
you voted*.

You don't have a face nor any identifiable character to attack and here
I am attacking your statements. Go figure!

> You seem to avoid argument on only an ideas worth, resorting to
> attacking thin air in an effort to confuse the unwitting... well, some

> presented--strange...

Your recent rantings present wild numbers and unverified percentages of
individuals within amateur radio. You've made some unsubstantiated
claims about the ARRL and about currently licensed radio amateurs. I'm
not going to let you get by with that unchallenged. It is quite easy to
hide behind your sofa and make pathetic claims as an anonymous writer.

Now you refered instead to what he was doing with them

so you are still obsessed with what other MEN are doing with their
genitals

I am of course well aware of the joke

Gee, Len, BPL isn't supposed to be radio at all. Fill us in on the
various intended BPL wireless propagation media. Those power lines are
intended to be antennas?

That's incorrect. I wrote of where he was going with them. I wrote
nothing at all about what he was doing with them and I did not refer to
his, hers or the desk clerk's genitals.

> so you are still obsessed with what other MEN are doing with their
> genitals

Are you still laboring under a misconception about which organs are included as genitals, Colonel?

> I am of course well aware of the joke

From your response, that was not at all evident.

Dave:

Cut the BS. You don't like me. You seek to discredit and make ground
though character assassination and any other dirty trick you learned in
grade school... no one cares... not even me... stay there if you wish...

I cannot fathom what you get from such, or what rewards such behavior has
paid you in the past, but then, all depends on what you are after I
suppose. Frankly, it is just my nature to hope you enjoy it, whatever it
may do for you...

can't or won't?

Indeed from your problems understanding anything I realy can't accept
as true the claims of folks like you that You can't undersatnd my
posts, but you can undersatnd Morse encoded signals in real time, sent
by real people

I am quite certain one of those claims is lie as well, which of course
is another matter

yes?
>
> I don't find you to be remotely normal.

so?

I am wether or not you think so or not, at least according to SCIENCE

your belief does not affect facts

both and Stevie are so interested in Male sexuality is is strane after
all I don't who or what you fool around with, would rather not know as
point of fact, and so many in this newsgrup consider it vital matter to
discuss what others are doing.

Is the word .sex. in the New title somewhere?

I don't like you? I have no idea who or what you are. Right now,
you're simply a nameless, faceless entity whose rantings often make him
appear to be drinking or heavily medicated.

> You seek to discredit and make ground
> though character assassination and any other dirty trick you learned in
> grade school... no one cares... not even me... stay there if you wish...

How can I possibly discredit he who does not exist?

> I cannot fathom what you get from such, or what rewards such behavior has
> paid you in the past, but then, all depends on what you are after I
> suppose. Frankly, it is just my nature to hope you enjoy it, whatever it
> may do for you...

My statement about your not being a Ben Franklin--utterly heartfelt.

My statement asking about your being an actor--quite sincere.

The bit about my not purchasing a rose plant of the variety "John
Smith"? That's likely true. It would have to be one beautiful rose.

The part about my not reading books by anonymous individuals attempting
to present something as factual--you have my actual view.

That bit about a town meeting? Why, "John", that's the way it works.
Nobody jumps up anonymously and present material to the council.

My correction of your blurb about voting? Take it to the bank.

My refutation of your claim about not being able to attack you because
you haven't a face or a name? Spot on.

My statement questioning your use of numbers and makeup of amateur radio
and your claims about the ARRL? They represent very real concerns I
have with anonymous trolls who make unsubstantiated claims.

So which B.S. is left to cut?

Len:

Phone lines are limited to roughly 38K by using the full audio bandwidth a phone line is filtered to, with the early compression techniques. 56K is obtained by improved data compression techniques.

Any line capable of supporting transmission of these audio freaks can carry that much digital data (roughly +/-300hz to +/-5,000hz.

DSL is obtained by pulling all the filters from the line, audio bandwidth is much expanded and much greater data can be crammed into that bandwidth, with even greater efficient compression techniques.

Powerlines can support near/equal such bandwidths. With a bandwidth allowing freqs to climb into the LF RF freqs, tremendous data speeds are possible.... very localized interference to some rf freqs may be generated... this is now in a testing phase...

Why this is so misunderstood is beyond explanation, or perhaps it is only limited to the older generations, for some unknown reason--as any familiar with technical details of data transmission methods and protocols should know this, it is very basic stuff...

Strange? I'm quite interested in male sexuality, Mark. I *am* male.

> I don't who or what you fool around with, would rather not know as
> point of fact, and so many in this newsgrup consider it vital matter to
> discuss what others are doing.

Well now, Mark, you have a problem there. You've made posts on usenet
which have been archived. They addressed your sexual preferences as
well as your "please hurt me" desires. If you are embarrassed by the
things you posted in a very public forum, perhaps you shouldn't have
posted them.

As to who I fool around with, I don't fool around with anyone. I'm married to a woman.

> Is the word .sex. in the New title somewhere?

It is now.

Dave:

I don't think you much have an "idea" about anything... nor do I care,
your banter becomes taxing... I have not only had the chance to see the
text you post to me, but others, if I am confused about what the common
denominator to all is--well, so be it... however, I have formed an opinion
of it, and it not anything which I need be bothered with...

I've not said "A" or "not A".

I've said that the morse distress call is not "ososososososo"

I've said that it matters "where I come in the signal". It is "SOS",
Mark, not "OSO" or "ososososososo". It isn't run together and it
doesn't begin with "o".

I can't understand it, Mark. There are simply too many errors in
spelling, grammar and word positioning to make an educated guess.

> Indeed from your problems understanding anything I realy can't accept
> as true the claims of folks like you that You can't undersatnd my
> posts, but you can undersatnd Morse encoded signals in real time, sent
> by real people

That'll have to be one of your unsolved mysteries, Mark. I'd have
trouble with morse if the words were misspelled and jumbled around. Oh,
I could copy the letters, but they'd still represent gibberish.

> I am quite certain one of those claims is lie as well, which of course
> is another matter

You seem to have great certainty that any number of people are simply
lying about any number of things. Of course, that doesn't mean that
you are correct. You're free to believe any crackpot thing you like.

I don't know if John is a loon or if, as I orginally surmised, he is
simply a troll. He is strange and he has bonded with Leonard. Water
always seeks its own level.

these days I am payng more attention to a certain future lady ham's
equipment myself although I would not care to share her with the FCC

an aside It would be nice if you pruned some the endless stuff is
piling up at the end of your post, slows down my conection something
feirce indeed tonight I have felt like I was back on Dailup

shudder

Wrong. I dismissed the bible and the version of Jesus that it depicts.
Whether or not such a person actually existed is another matter, and
it certainly doesn't have anything to do with evolution.

>I accepted debate on what that all involves,

They occasianally blow a couple grand on mass
maillings to try and get hams to join up. Likely they
get the names from the warranty cards hams send
in when they buy a new radio or the prize raffles
from the larger hamfests, what few they're are left
around that is. I can recall many years ago a certain large
hamfest down south selling their hamfest attendence
and ticket database to em for some extra $$$. This practice
is now discontinued. Just toss it in the trash or use it
o start the woodstove going come this winter.

>
> really?
>
> I am certainly more normal than he, or than you it seems

Lets see...

You're an admitted sexual deviant.

Dave and I are married heterosexuals.

You've lied about being a member of the Armed Forces.

Dave and I both have faithfully and Honorably served our
country.

You're an admitted liar in general.

I've never "caught" Dave in so much as an error of ommission,
let alone an overt mistruth.

You've stated you'd teach kids how to lie and to do it often.

If Dave's mentioned kids, I missed it, but two of mine are in
college and one is in Army Warrant Officer training. They didn't get
there by lying.

Then you claim to be "more normal" than others.

Uh huh...yeah...right...

> also better at trying to keep to topic,but then you are into attacks
> and not much else

I've seen tons of K8MN posts that addressed nothing but Amateur
Radio related posts, while we get "dreck" and lies from you.

> > > I am wether or not you think so or not, at least according to SCIENCE
> >
> > Please point us to a scientfic paper which indicates that you are normal.
>

I've read them.

"Mark Morgan" is not in there. Nor is there anything in there
that suggests pathological liars and sexual deviants are "normal".

> > > your belief does not affect facts
> >
> > You've presented no facts.
>
> so?

"So?"...

BBBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!

At least you're consistent about some things, Markie! Finding
indifference to facts being one of them!

> your reply has nothing to do with what you are repling to

"replying"

How can he NOT be replying to what he's replying to...?!?!

It is a conspiracy, Dave. The FCC is inflating the numbers of Hams for some reason, even though the conspiracists on the other side think they would like there to be *fewer* Hams, so that the FCC can have a good excuse to take away our band segments.

Make sense? No? I think its related to Chemtrails somehow..... ;^)

Finally, do some of these folks have some trouble with their antennas or something? When I tune our bands, I hear a *lot* of activity. And it isn't just on contest weekends. On those weekends the bands are wall to wall. Only open spots are around the Maritime nets, and it is wise to leave them some space.

Where did I say that? Of course it can be done. Wireless digital at HF
is similar to wireless at UHF and above. You just have a few things at
HF that are different. Noise is one of the differences. bandwidth is
another. If you are willing to out up with very slow transmissions,
Digital at HF is doable. Won't be high speed though, and it won't work
terribly well.

> I choose to look at a thorny problem and try to see if I can make
> lemonaide, maybe brew those throns in a decent cup of Tea

Well have at it, Mark! Occasionally the naysayers are proven wrong. Jim
had a few ideas that might be of some use. They have some flaws though,
as in requireing high power, special transmitters and recievers, and
most still use too much bandwidth.

>> Radio is a fairly mature field, and digital is getting there. Many

Experimentation proved them wrong. The experimentors then became the
new experts.

For all the bluff and bluster about how the internet is a dangerous
place, and only a fool would use their real identity, it is a telling
point to note that the anonymous brethren are the ones causing most of
the trouble.

The signals are at an HF rate. Does that make them HF?

Is digital a sine wave? Dave, I'm soo confused! All this bandwidth
stuff is such a crock. Dunno why I'm getting so worked up over it. Heck,
Digital can be done on DC for all that matter!

interesting that you don't adress your own lack of on topic content,
but that would much to expect from you, honesty

and yet I am far more honest than You Stevie, but then that isn't hard
>
> > > > I am wether or not you think so or not, at least according to SCIENCE

not at all

it is a fact that Dave's (nor your's for that matter)beliefs have no
power to affect facts

and you lie as usaul about my "indifference"

>
> > your reply has nothing to do with what you are repling to
>

what rationaize? no need you and Dave both are so into sex, male
sexuality that you can't carry on a discusion without it, and you both,
find fault with someone quite able to do so

>
> > > > I don't who or what you fool around with, would rather not know as

Liar Stevie the first thing off your Keyboard when I returned here was
about sex

I don't make an issue of it. I'd likely never mention if folks stoped
trying to use the fact That I am who I am as weapon, that it doesn't
work very well should do it

but I'll never mention my sexuality again, if the rest will refrain
from doing so

Offered this to you before if you recall, you pormised to do so and
that lasted less than a day

>

nope you did follow protocol, something you demend of others but fail
to do yourself

> I'm the person who originally wrote "doesn't matter where I come in the
> signal". The line was yours.

well you typed without putting it in quotes, which is the proper thing
to do, therefore IT was reasonable to believe you indeed choose to make
the statement yourself.

after all you insist YOU follow the rules of english, and you Demand
others do so, but then when you feel like it you don't bother with the
rules yourself

>
> >>I've said that it matters "where I come in the signal". It is "SOS",

Many other systems (like cb) require no license at all, so there's no
good way to know how many users there are. The fact that a certain
number of cb sets have been sold in the past X years tells nothing
definite about how many cb users there really are.

Same for stuff like FRS.

OTOH most broadcast and commercial licenses require usage as a
condition of grant. A broadcast station can (in theory) lose
its license if it has too many avoidable outages.

Of course the most prevalent use of two-way radio is the cell
phone. The license, as it were, is held by the provider(s). Of
course the users have almost no control over what the radio in
a cell phone does.

It's a classic troll trick. They make statements that
are provably false just to get attention. Then they
argue that what they say is true, or you didn't understand
it, or you've been brainwashed by ARRL, etc.

> >>>>>BTW, CQ has an article on HF digital

If you're used to 45 baud RTTY, 1200 baud is high speed, isn't it?

> > For example, if you're allowed to use wide-enough bandwidths,
> > all sorts of stuff is possible.

> Sure. I think some people are believing that I am saying this is

The difference is that unlike, say, the US Army in 1952, there is no
High Command that determines who gets what frequencies for what path
at what time.

> > If you're allowed to use very high power and high gain antennas,
> > all sorts of stuff is possible.
>
> A strong signal mode? 8^)

Sure! Look at what the military folks did. Big rhombic and curtain
arrays, etc. Find a suitable site, take it over as necessary for the
military purpose, put up whatever is needed - on the taxpayer's
dollars. If you need more power, just get it! Receivers like the
R-390, costing thousands of 1950s dollars? How many racks of them are
needed? Etc.

Completely different from what most hams deal with.

> > If you can separate the transmit and receive sites and/or frequencies
> > so that full duplex is achieved, all sorts of

Don't expect it from "John Smith", Len, "b.b.", or even "an old
friend".
You won't get it.

They're not about actually *doing* ham radio, just arguing about it.

I have to note that we speak of actual systems, real world devices -
some of which are yet to be made of course, but practicalities (granted
you much more than myself - but I am an RF neophyte, having come from
the digital world)

Others seem to be more in the vein of "so there! or someone is going to
come along and prove you naysayers wrong!" mode.

Faith based electronics.

I wonder how that tremendous antenna from the UofD is coming along? You know, the one that is going to revolutionize radio? HF antennas a few feet long that outperform anything we have today.
The one that was so "efficient" that it melted when the inventor powered it with 100 watts. And I'm not the one who used the word efficient, *they* did.

>

I wonder why they have to have wireless routers and receivers (what frequency do they operate at?...) Seems like if it is HF already, we shouldn't have to use them. I can see a little HF receiver hooked to my computer, and make a little antenna from what would ordinarily go into my Ethernet port. That should work, shouldn't it?

Maybe it is a conspiracy to sell electronic parts?

BWHAHAHAHAHAHAHAHAHAHA..Yeah, barbers were so prevalent in his
day! BWHAHAHAHAHAHAHAHAHAHAHAHA
What a dumbfuck you are, Saggytits. Get that much needed Rogaine
yet? Or are you going to get hair plugs?

Oh, and you'd better upgrade your research skills yourself.
According to http://www.barberpole.com/artof.htm, In Egypt, many
centuries before Christ, barbers were prosperous and highly
respected. The ancient monuments and papyrus show that the
Egyptians shaved their beards and their heads. The Egyptian
priests even went so far as to shave the entire body every third
day. At this time the barbers carried their tools in open-
mouthed baskets and their razors were shaped like small hatchets
and had curved handles. The Bible tells us that when Joseph was
summoned to appear before Pharaoh, a barber was sent for to
shave Joseph, so that Pharaoh's sight would not be offended by a
dirty face. Apparently Joseph looked like the picture you claim
is Roger's.
In Greece, barbers came into prominence as early as the fifth
century, BC. These wise men of Athens rivaled each other in the

excellence of their beards. Beard trimming became an art and barbers became leading citizens. Statesmen, poets and philosophers, who came to have their hair cut or their beards trimmed or curled and scented with costly essences, frequented their shops. And, incidentally, they came to discuss the news of the day, because the barber shops of ancient Greece were the headquarters for social, political, and sporting news. The importance of the tonsorial art in Greece may be gathered from the fact that a certain prominent Greek was defeated for office because his opponent had a more neatly trimmed beard.

In the third century, BC, the Macedonians under Alexander the Great began their conquest of Asia and lost several battles to the Persians who grabbed the Macedonians by their beards, pulled them to the ground and speared them. This resulted in a general order by Alexander that all soldiers be clean-shaven. The civilians followed the example of the soldiers and beards lost their vogue. Barbers were unknown in Rome until 296 BC, when Ticinius Mena came to Rome from Sicily and introduced shaving. Shaving soon became the fashion and the barber shop became the gathering place for the Roman dandies. No people were better patrons of the barbers than the Romans. They often devoted several hours each day to tonsorial operations, which included shaving, hair cutting, hairdressing, massaging, manicuring and the application of rare ointments and cosmetics of unknown formulas. The great ladies of Rome always had a hairdresser among their slaves and the rich nobles had private tonsors, as they were then called. Barbers were so highly prized that a statue was erected to the memory of the first barber of Rome.

When Hadrian became emperor, beards became the fashion again -- and for a very good reason. Hadrian had a face covered with warts and scars. He allowed his beard to grow to cover these blemishes. The people of Rome imitated the emperor and grew beards whether they needed them or not.

The fashion changed again to clean-shaven faces. We know that Caesar was clean-shaven. As we will see repeated in history many times, the leaders of the state were the leaders of fashion and the people were always ready to follow the prevailing styles. There are many passages in the Bible referring to the barber profession. Moses commanded that all who recovered from leprosy should be shaved. This was done as a health precaution, because throughout history the Jews have honored the beard as a badge of manhood. To this day, the orthodox Jews have little respect for clean-shaven men. During periods of mourning, the ancient Jews allowed their beards to go untrimmed, but ordinarily their beards were trimmed regularly. The prophet Ezekiel refers to an ancient custom in these words: "Take thou a barber's razor and cause it to pass upon thy head and upon thy beard." The razors of those days were made of flint and oyster

shells.

Looks like your claim that Jesus, who was Jewish, did indeed
have long hair and a beard.

><backpedals, unsubstantiated bullshit and excuses flushed>

That still doesn't change the fact Roger has short hair, dumbass!

BTW, Paul was a faggot just like Jesus.....who got what he
deserved on the cross.

Another small history lesson on the newsgroup for you, John:

About 7 or 8 years ago, Obersturmbandsfuhrer Heil stormed in here making like the Authoritative Elmer of all Elmers, spouting off about "CW" is way so much better than RTTY and illustrating that with his saving-the-day actions from Guinea-Bisseau in Africa for the Department of State, his employer at the time (in the "foreign service"). That was in the 1980s. He was then, as he is now, an Ultimate Authority on HF from his many many years as a ham (probably working a minimum of 8 hours a day on his ham job) and waded into the morse code testing arguments as Mister Morseman (a "foreign service" counterpart to "Captain Code").

Unfamiliar with this country of Guinea-Bisseau, I had to look it up. Found out it was NOT a prosperous country and that its chief export was cashew nuts. I stated that and Heil got very angry. [he was a "key employee" or something at State as a "communications officer"...blah blah blah] How dare *I* question ANY statements of Heil's! :-)

Heil got pissed and a half when I recounted the HF comms done by the U.S. Army of the 1950s...using mainly RTTY and TTY over (commercial format) SSB...NOT encountering these "bad conditions" where "only 'CW' would get through" (and saving-the-day). Heil tried to make the argument that "CW" was "necessary" and all that old snit. Heil stated that "my station" (taxpayer owned, actually) "NEVER WORKED 24/7!" Tsk, four operating teams very certainly worked the 3rd largest Army station in ACAN-STARCOM then, using about 40 transmitters shooting across the Pacific south-east-west from Tokyo, all around the clock. NO "CW" (manual morse code) used by my battalion that served the Headquarters for the Far East Command

then...none later...all on HF.

Heil committed some small gaffes in his rationalizations on what he wrote...specifically that the "CW" was needed to "synchronize" the RTTY schedules. Any TTY is automatically self-synchronizeable, has been since before WW2 times. Heil then "explained" that "synchronizing" meant schedule times and so forth. Odd that such wouldn't have been worked out beforehand in operating orders, common to everyone else.

Heil got most disturbed on my descriptions of the Army net being BIGGER than what State had (it was) and said "I didn't know anything about what State's radio had/did." Tsk, I did and already possessed a great deal of documentation obtained from Army sources and a few items of contractors supplying the U.S. government (the RCA "RACES" mass memory on mag cards, two of which were installed in DC at State's headquarters). Heil did not realize that some of the Department of State messages were actually carried on Army and Air Force communications circuits...more in Europe than in Asia. [I can identify the stations, the TTY ID, paths, and controlling hubs on all of ACAN-STARCOM from publicly-released information available before 1980, stuff that I have, obtained from a civilian engineer acquaintence who worked at "my" Army station]

Heil engages in a lot of Gamesmanship in here, frequently citing his many State assignments (Finland, several countries in Africa). He WAS DX to a lot of other hams, courtesy of the U.S. government and complementary callsigns given to "diplomatic" personnel of the USA. Problem is, Department of State radio is rather smaller than the U.S. military networks and the retirees from State's radio are a tiny percentage of "radio operators." Now the military networks' former members are also a small percentage...but they are larger than civil government "radio operators." The more vocal hams with previous military radio experience seem to come from the USN and those mostly from ship "radio room" assignments. Heil seems to be banking on his Department of State experience being rare, thus he can bullshit his way into posing as a Great Authority on What The Government Does In Radio among amateur radio hobbyists. Heil shows no sign of having worked IN the larger military radio communications networks during his military service...yet he implies knowing all about them. He knows little and all he can do is the BS implication that he does.

A shock to Heil must have been my appearance in here, an unlicensed-in-amateur-radio person who is no shrinking violet on opinions! Even worse, one who HAS documentary

proof to counter most of the total bullshit spouted by this great "radio expert." [three such documents posted on http://kauko.hallikainen.org/history/equipment] Perhaps he was disturbed that I didn't polish the boots of his surplus Wehrmacht costume from Western Casting? Could be.

Heil, like Robeson, vents a lot of anger in here, always trying to verbally thrash his "opponents" on a personal basis. SUBJECT be damned, he wants to "fight" on a one-to-one basis anyone who speaks against his opinions.

In the last half year Heil has whittled a schtick about my "not being a participant in ham radio" etc. and thinks that is some kind of psywar "weapon." It isn't. Contrary to Fearless Leader's instruction-commands, I didn't get a ham license FIRST "to show an interest in radio." The Army provided the opportunity to INCREASE my interest in radio (since 1947 along with lots of other interests) and I "disobeyed orders" by getting a Commercial First Phone in 1956 and then became an electronics design engineer. No, no, no, that was NOT the Order Of The Day...I should have dutifully learned morsemanship to become an amateur first according to Fearless Leader Heil. Screum.

Tsk, tsk. Haven't you been reading the ARRL Lab reports like
a good little ham?

Access BPL (Broadband over Power Lines) is ALL OVER HF and
dribbles over into low VHF. Hundreds, thousands of sideband
components at enough strength right next to your residence
to completely swamp your beloved HF receiver. If you have
BPL running through your neighborhood say goodbye to "working
the rare ones" with "CW"...even "CW" can't work-through all
that QRM.

[I really cannot believe you wrote what you did to display
such utter lack of knowledge about the subject after it has
received so much attention in here and on the FCC OET]

>Any line capable of supporting transmission of these audio freaks can
>carry that much digital data (roughly +/-300hz to +/-5,000hz.

[small point of order, upper limit about 3.4 KHz, no huhu...]

Both AM and PM at discrete increments push at the upper limit
by using more increments (enabling more states) but that
increases the probability of error. The present "56K" standard
is a compromise. The combinatorial AM-PM makes throughput
greater than either AM or PM by themselves...not easily explained
in text, needs graphical plotting.

>DSL is obtained by pulling all the filters from the line, audio bandwidth
>is much expanded and much greater data can be crammed into that bandwidth,
>with even greater efficient compression techniques.

True, and the providers are able to cram more charges onto one's
bill for that...:-)

>Powerlines can support near/equal such bandwidths. With a bandwidth
>allowing freqs to climb into the LF RF freqs, tremendous data speeds are
>possible.... very localized interference to some rf freqs may be
>generated... this is now in a testing phase...

In theory the Access BPL (what the FCC now calls it) can do
roughly 50 to 100 MBPS on proposed systems. That's on par
with the downlink cable TV services providing the same thing.

The MAJOR problem with Access BPL running through one's
neighborhood is that those can kiss their HF receiver
sensitivities bye-bye. Most of the tested BPL systems raise
the sensitivity floor 30 db or more.

By the way, it would seem that the Office of Engineering
and Technology at the FCC is getting stiffer with the BPL
providers. Saw this in scanning the Federal Register
contents looking for a Notice on WT Docket 05-235...it isn't
all on the OET page at the FCC website. The techno people
may be "getting even" in a small way with the political people

at 455 12th St SW. :-)

>Why this is so misunderstood is beyond explanation, or perhaps it is only
>limited to the older generations, for some unknown reason--as any familiar
>with technical details of data transmission methods and protocols should
>know this, it is very basic stuff...

IRRELEVANT to the amateur radio publications' editors. Those guys have to bow to pressure from their front office people (publishers) and "make it simple" for the readers. They seem to be of the opinion that hams are JUST radio operators. Since the periodicals NEED advertisers to pay their way, they tend to kowtow towards the advertisers offering hardware.

"Sidebands" as a result of modulations go only so far as voice transmissions in the ham "textbooks." [operators don't need smarts on theory?] Publishers and editors don't shine spotlights much on anything but AM voice sidebands...which may be THEIR deficiency. Radio amateurs get their theory where they can and that is mostly from the periodicals. If that theory ain't in those issues it seldom gets to the ham ops' heads. The publisher decides what goes in them magazines.

You may not have seen the ham magazines of the 50s when single channel SSB voice was beginning to take off. There was great antipathy towards PHASING methods of modulation-demodulation of SSB. Hams weren't told about PHASE, didn't have the tools to see phase, few could afford 'scopes that had passbands beyond 5 MHz. It was EASIER to build filter SSB mod-demod even though it CO$T a lot more for those crystal filters. Less thinking involved. AM voice spectra was easier to understand and "brute-force" filtering to eliminate an unwanted sideband almost intuitive. Despite some good attempts at showing PHASING methods in the 50's magazines, readers and editors alike didn't like it. Even after Mike Gingell (UK ham, now living in USA) did his Polyphase Network PhD paper on a low-cost, easy-component-tolerance quadrature phase circuit, the U.S. periodicals didn't care for it. The RSGB did and showed How and showed what UK and Yurp hams were doing with it in the pages of Radio Communication. That was 30 years ago...but European hams are having fun with that Gingell polyphase network in homebrew SSB building.

When it comes to Spread Spectrum and the Discrete Sequence SS, forget trying to explain the sidebands generated to radio operators. That subject doesn't help them win contest points or "work the rare ones." ["we" hams don't use that snit!] Forget spectra pictures of any modulation other than AM with a pure sinewave modulation input. Agreed, FM or PM at various modulation indexes can get confusing...H-P (just before they changed name to Agilent) had a neat "movie" on varying the index and showing how the sideband content changed, was done on their

website but can't be done in printed magazines. FM broadcasters commonly calibrate their modulation indices by the "carrier null" method where, at a certain modulation index with a given frequency mod signal, the carrier goes to minimum power as seen on a narrowband detector. That's been happening for over 40 years, a well-known technique.

Nah, hams don't need all that (hack, ptui) THEORY. All they need is high-rate MORSEMANSHIP! to be extra-super-special. Screum.

bit off

I have to restart this sentence to make it legible. Forgive me, things have been interesting lately.

The systems you and I speak of are arguably buildable. There is solid theory behind them.

> Others seem to be more in the vein of "so there! or someone is going
> to come along and prove you naysayers wrong!" mode.

Which is to say they are arguable only by people who just want to argue.

Sorry to butt in, but a bit confused here from the only famialr with
AM voice sidebands ad the talk of phasing sidebands are you refering to
a compatable system (that is can the brute force filtered SSb uint talk
to the phasing unit or are you discuing to different and Incompatable
systems (obviosuly if they were incompatable inerta is decent reason to
keep one over the other, after it has ekpt morse in place a LOT longer)

I migt as well learn something, and I am not afraid to admit the limits
of my knowledge that is of course the first step in increasing it

Only thing is that a DSL connection has a dedicated twisted pair
of wires, but BPL you have to share with everyone else in town.
Like cable modems, though the cable company cuts up their network so
only a handful of users share. With BPL the entire towns' users
have to share one channel. Now if you're the only user in town,
you got it made (unless a ham fires up his linear...)

Lennie,

If you actually knew what you think you know then you would indeed be a dangerous man.

What your actually are is a pitiful excuse
for a human being. One who lives in the paste and because of his inability to learn Morse code has decided to take it out on those that could, and did.

You know absolutely nothing about my military situation, other than the easily obtained information such as dates of service. I'll save you the trouble. Perhaps you can figure it out. If not I'll be glad to help.

June 1964 to June 1968 USAF
April 1971 to Dec 1979 US ARMY

> Had he been in communications with the
> military in Yurp "after" that, he wouldn't have any "disability"

I passed my Army physical in 1971, passed Army basic at Ft. Knox in 1971 and was assigned to Hanau, Germany. I came stateside for a tour at Ft. McClellan then back to Germany again. Fulda this time with the 11th Armored Cavalary.

From 1972 until I left service I was on medical profile. I ELECTED to get out and went to the VA and received 50%, later upgraded to the present 100%.

Your ignorance is glowing Lennie, only overshadowed by your stupidity.

Dan/W4NTI

Naw, I like it my way...hi.

That is my point Mike. Just because it is old....does not make it useless.
I believe in the KISS method. And CW, in emergencies, is the easiest and
simplest thing to get running.

No modems, no regulated power supplies, no computers. Just the basic stuff.

I was asked once by my Battalion commander while in the field in Germany. ( I was talking to the Feldburg 2m ham repeater while standing on top of the Command track). He asked how I could communicate with Frankfurt, and all of his radios could not......I said...."Well Sir, it takes two things to communicate.....an operator on both ends"

He ordered me to take my H/T every time we went to the field from then on.

## 957. A reply to Blapster (K1MAN)

Newsgroup: rec.radio.amateur.policy
Date: 2005-08-08 23:06:31 UTC
From: Dan/W4NTI <w4nti@mindNOSPAMATALLspring.com>
Message-ID: <XzRJe.2678$RZ2.712@newsread3.news.atl.earthlink.net>
Source record: 115206

Dear Mr. Baxter,

References to emergency work you allegedly performed 15 years ago are irrelevant to the present complaint # E05 003, now before the Maine Board of Professional Engineers.

Mr. Walter Cronkite (The Most Trusted Man in America) has stated bluntly that he has personal experience with your lack of ethics. He does not stand alone in this regard.

Section 14 of the MAINE PROFESSIONAL ENGINEERS CODE OF ETHICS states:

"Each registrant is charged with the responsibility of adhering to standards of highest ethical and moral conduct in all aspects of practice of Professional Engineering."

Robert J. Stolt alleged that your employer terminated you from employment when you repeatedly acted in a threatening manner to your supervisor and to other employees at the job site. You will recall that in February, 2005, the Maine Supreme Court upheld Mr. Stolt's privilege to make that statement.

Since you were employed as an Engineer at the time of your firing, Mr. Stolt's statement appears to be highly relevant to the Maine Professional Engineer's Code of Ethics.

Section 14 of the MAINE PROFESSIONAL ENGINEERS CODE OF ETHICS also states:

"Registrants shall recognize their responsibility to the public and shall represent themselves before the public only in an objective and truthful manner."

You have stated repeatedly that the FCC's Chief Enforcement Officer for Amateur Radio is "a cheap and corrupt politician" and a "moron" and you have also referred to him as the "Gestapo Chief for Amateur Radio." You also referred to over 100 of your peers as "Nazi's" and "Brown Shirts." These statements also appear to be relevant to the Code of Ethics.

Section 14 of the MAINE PROFESSIONAL ENGINEERS CODE OF ETHICS also states:

"Registrants shall not attempt to injure, maliciously or falsely, directly or indirectly, the professional reputation, prospects, practice or employment of other registrants nor indiscriminately criticize other registrants' work."

When you referred to W. Lee McVey, PE as a member of the Nazi party, he apparently interpreted your statement to be derogatory and defaming. He stated, "I consider such postings as a serious attack of me personally... meant to demean and detract from my personal and professional credentials."

Your statement about Mr. McVey also appears to be relevant to the Code of Ethics.

If the Maine Board of Professional Engineers retains you as a member of their organization, after being advised of your activities, that's something they will have to live with. However, I think your behavior is a poor reflection on Professional Engineers everywhere. Therefore, I hope they protect their organization's reputation by disassociating themselves from you at their earliest opportunity.

Sincerely,

Brian Crow

Isn't that what a lot of the newsgroup is doing now? hehe

Kee-rect! Now I wonder why they don't put them at some other frequency,
such as HF? Isn't there a HF segment somewhere around 27 MHz or so where
they used to have cordless phones? Why not use that? I don't think there
are any phones there now.

Then let us modulate say a 1.8 MHz signal with say a 30 MHz signal.

Aww heck. Why don't we use a quarter wave dipole for the antenna on
this beast! ;^)
